Cryptography Made Simple-Nigel Smart 2015-11-12 In this introductory textbook the author explains the key topics in cryptography. He takes a modern approach, where defining what is meant by "secure" is as important as creating something that achieves that goal, and security definitions are central to the discussion throughout. The author balances a largely non-rigorous style — many proofs are sketched only — with appropriate formality and depth. For example, he uses the terminology of groups and finite fields so that the reader can understand both the latest academic research and "real-world" documents such as application programming interface descriptions and cryptographic standards. The text employs colour to distinguish between public and private information, and all chapters include summaries and suggestions for further reading. This is a suitable textbook for advanced undergraduate and graduate students in computer science, mathematics and engineering, and for self-study by professionals in information security. While the appendix summarizes most of the basic algebra and notation required, it is assumed that the reader has a basic knowledge of discrete mathematics, probability, and elementary calculus.

The Challenge Culture-Nigel Travis 2018-09-18 The executive chairman and former CEO of Dunkin' Donuts and Baskin Robbins reflects on the unique, results-oriented discipline he's developed over decades of leadership, which provides a blueprint for any organization to achieve prosperity. We live in an era in which successful organizations can fail in a flash. But they can cope with change and thrive by creating a culture that supports positive pushback: questioning everything without disrespecting anyone. Nigel Travis has forty years of experience as a leader in large and successful organizations, as well as those facing existential crisis-such as Blockbuster as it dawdled in the face of the Netflix challenge. In his ten years as CEO and chairman of Dunkin' Brands, Travis fine-tuned his ideas about the challenge culture and perfected the practices required to build it. He argues that the best way for organizations to succeed in today's environment is to embrace challenge and encourage pushback. Everyone-from the new recruit to the senior leader-must be given the freedom to speak up and question the status quo, must learn how to talk in a civil way about difficult issues, and should be encouraged to debate strategies and tactics-although always in the spirit of shared purpose. How else will new ideas emerge? How else can organizations steadily improve? Through colorful storytelling, with many examples from his own career-including his leadership in turning around the fear-ridden culture of the London-based Leyton Orient Football Club, of which he is part owner-Travis shows how to establish a culture that welcomes challenge, achieves exceptional results, and ensures a prosperous future.

A Decade of Action in Transport-World Bank. Independent Evaluation Group 2007 Throughout the past decade transport projects have played a pivotal role in economic development and poverty alleviation. This review finds that the World Bank's strategy in this area has been well managed and effective. The strong support for intercity highway construction and rehabilitation contributed to private sector development, steadily improving project outcome ratings, and key elements of the strategy-sustainability. However, transport strategies must now focus more attention on confronting cross-cutting issues such as traffic congestion, environmental damages, safety, efficiency, and affordability. This focus will necessitate more innovative, multi-sectoral approaches and the Bank may have to reconsider its priorities to fully address these challenging social, political, and environmental issues and shift resources to ensuring efficient multimodal transport, improved rural linkages, and better urban transport.

Euro-Asian Management and Business I-Brij N. Kumar 1995 impact in terms of new opportunity and risk. In Japan new markets can be in the offering as a result of expected deregulation. But on the other hand greater competition in the home-countries can become a threat, when a host of new fast growing Japanese companies appear on the scene as they break out of oversized and inflexible corporate groups, and seek their fortune independently on global markets. Six years after Tiananmen China stands today as one of the worlds leading growth nations. Because of this - and only for this reason - it is recognized and to a certain extent even respected by all countries as a partner in commerce and industry. Trade ties with the western world are stronger than ever before. Japanese trade with China has been booming since 1989, peaking at roughly U. S. \$ 38 billion in 1993. U. S. -China trade has almost tripled since 1988 to \$ 41 billion in 1993. A similar pattern is seen in China's trade with West Europe which according to Chinese figures amounted to U. S. \$ 22 billion in 1993 which was 50% above the volume reached in 1992. Although in China "actual" investment can be way below "approved" investment, the fact remains, that some U. S. \$ 20 billion have been poured into the country since 1991 and another \$ 12 billion were absorbed in 1992.
