Apex Predators-Steve Jenkins 2017-06-06 What does it take to be the "top dog"? In his latest book, the award-winning author and illustrator Steve Jenkins introduces readers to apex predators—the animals that are at the top of their food chains and have no natural enemies. Using his signature art style, Jenkins illustrates how these animals dominate their different ecosystems using speed, strength, and even cooperation and cunning. Take a trip through history and discover apex predators both past and present, from the earliest sea creatures to the modern African lion and giant freshwater ray, which can grow to over fifteen feet.

Toyin Falola and African Epistemologies-A. Bangura 2015-02-11 While there are five important festschriften on Toyin Falola and his work, this book fulfills the need for a single-authored volume that can be useful as a textbook. I develop clearly articulated rubrics and overarching concepts as the foundational basis for analyzing Falola's work.  
Carnivore Ecology and Conservation-Luigi Boitani 2012-01-12 Provides concise, yet authoritative descriptions of the most common techniques used to study wild carnivores and to conserve and manage their populations within increasingly human-dominated landscapes.  
Conservation Biology in Sub-Saharan Africa-Richard Primack 2019-09-10 Conservation Biology in Sub-Saharan Africa comprehensively explores the challenges and potential solutions to key conservation issues in Sub-Saharan Africa. Easy to read, this lucid and accessible textbook includes fifteen chapters that cover a full range of conservation topics, including threats to biodiversity, environmental laws, and protected areas management, as well as related topics such as sustainability, poverty, and human-wildlife conflict. This rich resource also includes a background discussion of what conservation biology is, a wide range of theoretical approaches to the subject, and concrete examples of conservation practice in specific African contexts. Strategies are outlined to protect biodiversity whilst promoting economic development in the region. Boxes covering specific themes written by scientists who live and work throughout the region are included in each chapter, together with recommended readings and suggested discussion topics. Each chapter also includes an extensive bibliography. Conservation Biology in Sub-Saharan Africa provides the most up-to-date study in the field. It is an essential resource, available on-line without charge, for undergraduate and graduate students, as well as a handy guide for professionals working to stop the rapid loss of biodiversity in Sub-Saharan Africa and elsewhere.  
Nature Conservation in Southern Africa- 2018-11-15 Nature Conservation in Southern Africa. Morality and Marginality: Towards Sentient Conservation? proposes ways to study linkages between the marginality, subjectivity and agency of both human and animals, promoting a new approach to conservation referred to as 'sentient conservation'.  
Reintroduction of Top-Order Predators-Matt W. Hayward 2009-04-20 Large predators are among the most threatened species on the planet and ways of conserving them in the face of increasing human populations and associated resource requirements are becoming critical. This book draws upon the experiences of some of the world's foremost large carnivore specialists to discuss the numerous issues associated reintroducing large predators back into their natural habitats. Reviews of internationally renowned reintroduction programs for wolves, European lynx and African wild dog reveal the successes and failures of these actions. Experts on tigers, snow leopards and jaguars contend that there are other conservation options of higher priority that will ensure their security in the long-term. Other experts discuss more theoretical aspects such as whether we know enough about these species to be able to predict their behavioural or ecological response to the reintroduction process. Social, economic, political and genetic considerations are also addressed.  
The Mosquito-Timothy C. Winegard 2019-08-06 \*\*The instant New York Times bestseller\*\*"An international bestseller." "Hugely impressive, a major work."—NPR A pioneering and groundbreaking work of narrative nonfiction that offers a dramatic new perspective on the history of humankind, showing how through millennia, the mosquito has been the single most powerful force in determining humanity's fate Why was gin and tonic the cocktail of choice for British colonists in India and Africa? What does Starbucks have to thank for its global domination? What has protected the lives of popes for millennia? Why did Scotland surrender its sovereignty to England? What was George Washington's secret weapon during the American Revolution? The answer to all these questions, and many more, is the mosquito. Across our planet since the dawn of humankind, this nefarious pest, roughly the size and weight of a grape seed, has been at the frontlines of history as the grim reaper, the harvester of human populations, and the ultimate agent of historical change. As the mosquito transformed the landscapes of civilization, humans were unwittingly required to respond to its piercing impact and universal projection of power. The mosquito has determined the fates of empires and nations, razed and crippled economies, and decided the outcome of pivotal wars, killing nearly half of humanity along the way. She (only females bite) has dispatched an estimated 52 billion people from a total of 108 billion throughout our relatively brief existence. As the greatest purveyor of extermination we have ever known, she has played a greater role in shaping our human story than any other living thing with which we share our global village. Imagine for a moment a world without deadly mosquitoes, or any mosquitoes, for that matter? Our history and the world we know, or think we know, would be completely unrecognizable. Driven by surprising insights and fast-paced storytelling, The Mosquito is the extraordinary untold story of the mosquito's reign through human history and her indelible impact on our modern world order.

The African Wild Dog-Scott Creel 2019-12-31 With only 5,000 surviving, the African wild dog (*Lycaon pictus*) is one of the world's most endangered large carnivores—and one of the most remarkable. This comprehensive portrait of wild dogs incorporates previously scattered information with important new findings from a six-year study in Tanzania's Selous Game Reserve, Africa's largest protected area. The book emphasizes ecology, concentrating on why wild dogs fare poorly in protected areas that maintain healthy populations of lions, hyenas, or other top carnivores. In addition to conservation issues, it covers fascinating aspects of wild dog behavior and social evolution. The Creels use demographic, behavioral, endocrine, and genetic approaches to examine how and why nonbreeding pack mates help breeding pairs raise their litters. They also present the largest data set ever collected on mammalian predator-prey interactions and the evolution of cooperative hunting, allowing them to account for wild dogs' prowess as hunters. By using a large sample size and sophisticated analytical tools, the authors step well beyond previous research. Their results include some surprises that will cause even specialists to rethink certain propositions, such as the idea that wild dogs are unusually vulnerable to infectious disease. Several findings apply broadly to the management of other protected areas. Of clear appeal to ecologists studying predation and cooperation in any population, this book collects and expands a cache of information useful to anyone studying conservation as well as to amateurs intrigued by the once-maligned but extraordinary wild dog.

Humans and Lions-Keith Somerville 2019-07-30 This book places lion conservation and the relationship between people and lions both in historical context and in the context of the contemporary politics of conservation in Africa. The killing of Cecil the Lion in July 2015 brought such issues to the public's attention. Were lions threatened in the wild and what was the best form of conservation? How best can lions be saved from extinction in the wild in Africa amid rural poverty, precarious livelihoods for local communities and an expanding human population? This book traces man's relationship with lions through history, from hominids, to the Romans, through colonial occupation and independence, to the present day. It concludes with an examination of the current crisis of conservation and the conflict between Western animal welfare concepts and sustainable development, thrown into sharp focus by the killing of Cecil the lion. Through this historical account, Keith Somerville provides a coherent, evidence-based assessment of current human-lion relations, providing context to the present situation. This book will be of interest to students and scholars of environmental and African history, wildlife conservation, environmental management and political ecology, as well as the general reader.  
Wolf Pack vs. Moose-Nathan Sommer 2020-08-01 Wolves are apex predators in their habitat, but that does not mean they don't fear the awesome strength of a bull moose! This action-packed title looks at both animals to compare battle advantages and methods of attack. Features include size comparisons and stat-packed profiles, while a fight narrative wraps up the book. Who will be the victor today?

The Dogs that Made Australia-Guy Hull 2018-07-01 Hunter. Worker. Legend. The untold story of the dog's role in building our nation. The Dogs That Made Australia pays tribute to the dogs that gave their all for our prosperity: the fearless hounds that saved fledgling colonies from famine; the courageous heelers and tireless collies that powered the rise of beef and wool; the tough little home-grown terriers that protected the homestead and garden; and the extraordinary police dogs, ahead of their time, loved by the nation. The selfless exploits of our heroic dogs are writ indelibly in our nation's heritage and identity. The Dogs That Made Australia is a vivid and meticulously researched history of Australia told from the perspectives of the terrier and of the dogs that were imported and developed here, as well as the humans who loved, feared and worked them. PRAISE 'A highly readable book about Australia's dog heroes and their contribution to Australia's development. This is a book for the ages. I loved every page!' Tony Parsons, OAM, author of *The Kelpie* 'This should be on every school list for every primary school. It is a fantastic Australian history reference' Narelle Hammond, Secretary, Australian Cattle Dog Society of NSW  
Free-Ranging Dogs and Wildlife Conservation-Matthew E. Gompper 2013-10-17 Dogs are the world's most common and widespread carnivores and are nearly ubiquitous across the globe. The vast majority of these dogs, whether owned or un-owned, pure-bred or stray, spend a large portion of their life as unconfined, free-roaming animals, persisting at the interface of human and wildlife communities. Their numbers are particularly large throughout the developing world, where veterinary care and population control are often minimal and human populations are burgeoning. This volume brings together the world's experts to provide a comprehensive, unifying, and accessible review of the effects of dogs on native wildlife species. With an emphasis on addressing how free-ranging dogs may influence wildlife management and native species of conservation concern, chapters address themes such as the global history and size of dog populations, dogs as predators, competitors, and prey of wildlife, the use of dogs as hunting companions, the role of dogs in maintaining diseases of wildlife, and the potential for dogs to hybridize with wild canid species. In addition, the potential role of dogs as mediators of conservation conflict is assessed, including the role of dogs as livestock guardians, the potential for dogs to aid researchers in locating rare wildlife species of conservation interest, and the importance of recognizing that some populations of dogs such as dingoes have a long history of genetic isolation and are themselves important conservation concerns. A common theme woven throughout this volume is the potential for dogs to mediate how humans interact with wildlife and the recognition that the success of wildlife conservation and management efforts are often underpinned by understanding and addressing the potential roles of free-ranging dogs in diverse natural ecosystems. Free-Ranging Dogs and Wildlife Conservation is aimed at professional wildlife and conservation ecologists, managers, graduate students, and researchers with an interest in human-dog-wildlife interactions. It will also be of relevance and use to dog welfare researchers, veterinary scientists, disease ecologists, and readers with an interest in the interface of domestic animals and wildlife.  
Resources for American Literary Study-Jackson R. Bryer 2006 Founded in 1971, Resources for American Literary Study soon became a favored venue for archival scholarship and bibliographical analysis in American literature. Recent issues have featured unpublished letters from F. Scott and Zelda Fitzgerald, Tennessee Williams, Bret Harte, Edith Wharton, Alice James, Willa Cather, and Nathanael West; analyses of manuscripts by Thoreau, Hemingway, Eugene O'Neill; checklists of letters by John Cheever; and, a Prospects section with expert recommendations for the future study of authors ranging from Poe to Malamud. Book reviews are a prominent feature - over 20 in this volume. RALS became a clothbound annual with volume 27 and is published by AMS Press. Everything else that has made the journal a force in literary study for the past thirty years is in place.  
Great African Adventures-Jacques Marais 2008 Maps, up-to-date information and contact details make this the perfect primer to African adventure by one of South Africa's best-known adventurers  
Trophic Cascades-John Terborgh 2013-06-25 Trophic cascades—the top-down regulation of ecosystems by predators—are an essential aspect of ecosystem function and well-being. Trophic cascades are often drastically disrupted by human interventions—for example, when wolves and cougars are removed, allowing deer and beaver to become destructive—yet have only recently begun to be considered in the development of conservation and management strategies. Trophic Cascades is the first comprehensive presentation of the science on this subject. It brings together some of the world's leading scientists and researchers to explain the importance of large animals in regulating ecosystems, and to relate that scientific knowledge to practical conservation. Chapters examine trophic cascades across the world's major biomes, including intertidal habitats, coastal oceans, lakes, nearshore ecosystems, open oceans, tropical forests, boreal and temperate ecosystems, low arctic scrubland, savannas, and islands. Additional chapters consider aboveground/belowground linkages, predation and ecosystem processes, consumer control by megafauna and fire, and alternative states in ecosystems. An introductory chapter offers a concise overview of trophic cascades, while concluding chapters consider theoretical perspectives and comparative issues. Trophic Cascades provides a scientific basis and justification for the idea that large predators and top-down forcing must be considered in conservation strategies, alongside factors such as habitat preservation and invasive species. It is a groundbreaking work for scientists and managers involved with biodiversity conservation and protection.  
Zoology for Kids-Josh Hestermann 2015-03-01 "Packed with facts and photos, Zoology for Kids is a vibrant introduction to zoology that also provides inspiration for career options and activities to help children further explore and apply what they have learned." —Liesel Pimentel, manager of education and formal programs, Phoenix Zoo Zoology for Kids invites young animal lovers to discover the animal kingdom through clear, entertaining information and anecdotes and hands-on activities. Part 1 introduces the science of zoology, discussing animals' forms, functions, and behaviors as well as the history behind zoos and aquariums. Kids bake edible animal cells, play a dolphin-echolocation game, and design an exhibit. Part 2 offers an insider's look at how zoologists apply their knowledge every day. Kids peek into the world of zookeepers and aquarists, veterinarians, wildlife researchers, and conservationists. They "train" their friends, mold a tiger's jawbone, and perform field research in their own backyard. Animal enthusiasts come away with new knowledge, a healthy respect for the animal kingdom, and the idea that they can pursue animal-related careers and make a difference to preserve and protect the natural world. Josh Hestermann is a marine-mammal keeper and trainer at the Brookfield Zoo in Illinois. Bethanie Hestermann is a freelance writer and contributing writer and editor at large at Connected World magazine. They live in Brookfield, Illinois. Martin and Chris Kratt, the Kratt Brothers, are the creators and cohorts of the PBS Kids series *Wild Kratts*, *Kratts Creatures*, and *Zoboomafo*.

The Invaders-Pat Shipman 2015 Humans domesticated dogs soon after Neanderthals began to disappear. This alliance between two predator species, Pat Shipman hypothesizes, made possible unprecedented success in hunting large Ice Age mammals—a distinct and ultimately decisive advantage for human invaders at a time when climate change made both humans and Neanderthals vulnerable.  
The Last Lions of Africa-Anthony Ham 2020-08-04 'Bravely pursued, acutely observed and elegantly told.' John Vaillant, author of *The Tiger* 'Urgent and important. This moving tale with a heroic cast of characters, leonine and human, is a must-read for anyone passionate about wildlife and wild places.' Tony Park, author of *Last Survivor* This is the riveting and illuminating story of Australian writer Anthony Ham's extraordinary journey into the world of lions. Haunted by the idea that they might disappear from the planet in our lifetime, he ventured deep into the African wilderness, speaking to local tribespeople and activists as well as to rangers, scientists and conservationists about why lions are close to extinction and what can be done to save them. In *The Last Lions of Africa*, we walk alongside Anthony as he reveals the latest extraordinary science surrounding the earth's dwindling lion populations and their often surprising relationship to mankind. As he uncovers heartbreaking and astonishing accounts of individual lions, prides and habitats, each chapter unfolds as both gripping campfire story and deeply researched exploration of larger mysteries in the natural world. Anthony's vivid storytelling weaves together natural history, ancient lore and multidisciplinary science to show us a world in which human populations are growing and wild lands are shrinking; where lions and indigenous peoples fight not for sovereignty over the land but for their very existence. In this gripping and crucial book, Anthony Ham brings Africa, its people and its endangered lions to magnificent life and shows the surprising ways those last lions might be saved.

Saltwater Fly-fishing in South Africa-Bruce Black 2008  
Heart of a Lion-William Stolzenburg 2016-04-12 Late one June night in 2011, a large animal collided with an SUV cruising down a Connecticut parkway. The creature appeared as something out of New England's forgotten past. Beside the road lay a 140-pound mountain lion. Speculations ran wild, the wildest of which figured him a ghostly survivor from a bygone century when lions last roamed the eastern United States. But a more fantastic scenario of facts soon unfolded. The lion was three years old, with a DNA trail embarking from the Black Hills of South Dakota on a cross-country odyssey eventually passing within thirty miles of New York City. It was the farthest landbound trek ever recorded for a wild animal in America, by a barely weaned teenager venturing solo through hostile terrain. William Stolzenburg retraces his two-year journey—from his embattled birthplace in the Black Hills, across the Great Plains and the Mississippi River, through Midwest metropolises and remote northern forests, to his tragic finale upon Connecticut's Gold Coast. Along the way, the lion traverses lands with people gunning for his kind, as well as those championing his cause. Heart of a Lion is a story of one heroic creature pitting instinct against towering odds, coming home to a society deeply divided over his return. It is a testament to the resilience of nature, and a test of humanity's willingness to live again beside the ultimate symbol of wildness.
