Contemporary Ergonomics 2005-Philip D. Bust 2005-05-12 The broad and developing scope of ergonomics - the application of scientific knowledge to improve peoples' interaction with products, systems and environments - has been illustrated for over twenty years by the books that make up the Contemporary Ergonomics series. Presenting the proceedings of the Ergonomics Society's annual conference, the series embraces the wide range of topics. Individual papers provide insight into current practice, present new research findings and form an invaluable reference source. The volumes provide a fast track for the publication of suitable papers from international contributors. These are chosen on the basis of abstracts submitted to a selection panel in the autumn prior to the Ergonomics Society's annual conference held in the spring. A wide range of topics are covered in these proceedings, including: applications of ergonomics, air traffic control, cognitive ergonomics, defence, design, environmental ergonomics, ergonomics4schools, hospital ergonomics, inclusive design, methods and tools, occupational health and safety, slips, trips & falls and transport. As well as being of interest to mainstream ergonomists and human factors specialists, Contemporary Ergonomics will appeal to all those who are concerned with people's interactions with their working and leisure environment including designers, manufacturing and production engineers, health and safety specialists, occupational, applied and industrial psychologists, and applied physiologists.

InCIEC 2014-Rohana Hassan 2015-05-11 The special focus of this proceedings is to cover the areas of infrastructure engineering and sustainability management. The state-of-the art information in infrastructure and sustainable issues in engineering covers earthquake, bioremediation, synergistic management, timber engineering, flood management and intelligent transport systems. It provides precise information with regards to innovative research development in construction materials and structures in addition to a compilation of interdisciplinary finding combining nano-materials and engineering.

Ground and Soil Improvement-Chris A. Raison 2004 Methods for improving ground and soil have undergone significant developments in recent years, particularly in terms of application and usage, and many innovative techniques have been introduced. However, it is of significance that in many areas the design process still lacks a theoretical framework. The papers included in this volume, written by international authors, deal with a cross-section of problems faced by many practising engineers and provide advice and guidance on how these problems can be dealt with in a practical manner.

Advances in Building Materials, CEBM 2011-Jing Ying Zhao 2011-05-31 Volume is indexed by Thomson Reuters CPCI-S (WoS). This collection of 367 peer-reviewed papers covers the latest advances in Concrete Materials, Green Building Materials, Nanotechnology and Nano-Materials, Experimental Studies of Materials Properties, New Building Materials, Steel and Alloy Materials, Applied Mechanics and Materials, Geotechnical Engineering and Geosynthetics. Taken together with its coverage of their applications, this collection will be welcomed by anyone interested in these topics.

Geosynthetics in Civil Engineering-R W Sarsby 2006-12-22 Geosynthetics are man-made polymer-based materials which facilitate cost effective building, environmental, transportation and other construction projects. Given their versatility, geosynthetics are a vital material in all aspects of civil engineering. The first section of the book covers the fundamentals of geosynthetics. Chapters discuss the design and durability of geosynthetics together with their material properties and international standards governing their use. Building on these foundations, part two examines the various applications of geosynthetics in areas such as filters, separators, landfills, barriers and foundation materials. The book concludes by reviewing methods of quality assurance and the service life of geosynthetics. Written by an international team of contributors, Geosynthetics in civil engineering is an essential reference to all those involved in civil engineering. Discusses the fundamentals of geosynthetics Examines various applications in areas such as filters, separators, landfills and foundation materials Reviews quality assurance and the service life of geosynthetics

Alternative Materials in Road Construction-Philip Thomas Sherwood 2001 With the landfill tax and the introduction of a tax on the use of primary aggregates, increasing financial pressure is now being exerted on highway engineers to provide the most economic alternatives to naturally-occurring roadmaking materials. Alternative materials in road construction: Second edition, provides practical guidance in the selection of substitute materials, including the economic and technical considerations of their use and advice on the benefits and pitfalls of each material. This fully revised second edition includes: Extensively re-written and updated sections on classification and sources Specifications of road making materials and environmental and economic considerations Enlarged sections on construction and demolition wastes to take account of the increasing concern at the depletion of natural resources and the much greater emphasis on recycling A new chapter on Government and EC Policy with respect to environmental damage and recycling Alternative materials in road construction: Second edition is divided into three parts. Part 1 discusses the demand and requirements of road making materials and the specifications that they have to meet if they are to give sa

Geotechnics for Building Professionals-J. A. Charles 2005 Gives an overview of ground behaviour and geotechnics, focusing on shallow foundations for low-rise buildings. Written for non-experts, and their professional advisers, the book brings together guidance published by BRE over a number of years.

Soil Stabilization with Cement and Lime-Philip Thomas Sherwood 1993 Soil stabilization is the process whereby soils and related materials are made stronger and more durable by mixing with a stabilizing agent. These techniques are used for road construction in most parts of the world, although the circumstances and reasons for resorting to stabilization vary considerably.

Tunnelling Contracts and Site Investigation-Dr P.B. Attewell 1995-08-31 A wide ranging and up-to-date review of experience of tunnelling contracts, particularly those for sewerage and drainage tunnels. The review is based on the 6th edition of the ICE Conditions of Contract, but it takes note of new forms of contract which are leading towards less adversarial contractual relations. ^

Manual of Soil Laboratory Testing, Permeability, Shear Strength and Compressibility Tests-K. H. Head 1994 the second of three volumes that act as laboratory manuals for those involved in geotechnical laboratory testing. Volume 2 covers standard laboratory tests for the measurement of soil permeability, CBR value, shear strength (total stress and fully-drained), and condensation characteristics. This revised edition (1st ed., 1982) takes into account the changes

and additions to BS 1377 in the 1990 revision of that Standard, and subsequent amendments. Some miscellaneous tests that are becoming increasingly significant have been added, as well as the ring shear test and an expanded treatment of consolidation tests on peat. Bulk Solids Handling-Don McGlinchey 2008-04-28 Bulk Solids Handling: Equipment Selection and Operation provides an overview of the major technologies involved in the storage and handling of particulate materials from large grains to fine cohesive materials. Topics covered include characterisation of individual particles and bulk particulate materials, silo design for strength and flow, pneumatic conveying systems, mechanical conveying, and small scale operations. Guidance is given on appropriate equipment choices depending on the type of material to be handled, and applications and limitations of current bulk solids handling equipment are discussed.

Manual of Soil Laboratory Testing, Effective Stress Tests-K. H. Head 1998-07 Volume three of this text covers soil testing in terms of effective stress, for which the measurement of pore water pressure is the essential feature. The principle and theory of effective stress are explained, practical applications are outlined, and the apparatus used, including its calibration and checking, is described.

Specification for the Construction of Slurry Trench Cut-off Walls as Barriers to Pollution Migration-Institution of Civil Engineers (Great Britain) 1999 This specification, and the appended notes for guidance, has been compiled to be used where slurry trench cut-off walls are required to act as barriers to pollution migration. It provides a standard and consistent approach to the design, construction, testing and monitoring of cut-off walls, guidance on the appropriateness of this technique and current best practice.

Road Form and Townscape-Jim McCluskey 1992 One of the most important factors determining environmental quality in both urban and residential areas is the design of roads in their relationship to their surroundings. The author, civil engineer and landscape architect, combines close attention to aesthetic and urban values with effective engineering solutions. Lavishly illustrated, the book familiarizes architects, planners, developers, civil engineers and local authorities with the essentials of road engineering while making engineers aware of the environmental context within which roads must be planned and built if they are to succeed with the people who will use them and live alongside them. This revised edition is most timely and includes a new chapter on major urban and rural roads Addresses the subject of traffic calming

Admixtures -- Enhancing Concrete Performance-Ravindra K. Dhir 2005 For opportunities to change into beneficial practice, engineers, material scientists, architects, manufacturers and suppliers must focus on the changes that are required to champion concrete and maintain its dominance within the global construction industry. This conference was organised to address these changes.
