Budd-Chiari Syndrome-Xingshun Qi 2019-11-13 This book offers a systematic introduction to Budd-Chiari syndrome, a rare but life-threatening vascular disorder of the liver, which refers to obstructions at any site from the hepatic veins to the suprahepatic inferior vena cava. The book mainly covers the history, epidemiology, etiology and risk factors, pathology, diagnosis, pharmacological and interventional aspects, surgical treatment, etiological treatment, and prognostic assessment of Budd-Chiari syndrome. Notably, it also presents cutting-edge research findings in this field. The early diagnosis of Budd-Chiari syndrome is vital, as it allows clinicians to pursue more targeted and effective treatment strategies, thus improving patient outcomes. However, much information, including the latest advances, has not yet been fully disseminated in current clinical practice. This book addresses that gap, helping physicians to improve diagnosis and establish standard treatment strategies, helping researchers conduct clinical and experimental studies, and even helping patients and their relatives to recognize this disease.

Diagnosis of Liver Disease-Etsuko Hashimoto 2019-07-18 This book guides practitioners in the assessment of patients with a liver problem. The emphasis is on the role of macro- and microscopic pathology in elucidating pathogenesis as well as identifying confounding features of image findings that may lead to a more elaborate differential diagnosis. If appropriate, the role of light and electron microscopic examination, along with the role of specific stains and molecular techniques, is illustrated. In addition, the concept of each liver disease is summarized briefly and its up-to-date is provided, and unresolved problems in diagnosis, treatment, and pathogenesis are clearly described. The approach in this book is a practical one with a focus on the evaluation of illustrative cases, simultaneously demonstrating cross-sectional images (ultrasonography, computed tomography, magnetic resonance imaging, and angiography), pathological findings, and peritoneoscopic images. The diagnosis and therapy are summed up in helpful tables, and association of clinical manifestations with image analysis and pathological findings is shown to be important in differential diagnosis and treatment. With the authors comprising internationally renowned experts, this book will serve as a useful source of information for medical students, physicians, internists, hepatologists, gastroenterologists, radiologists, and pathologists worldwide.

Pearls and Pitfalls in Abdominal Imaging-Fergus V. Coakley 2010-10-14 Research consistently suggests that 1.0 to 2.6% of radiology reports contain serious errors, many of which are avoidable, and it is clear that all radiologists can struggle with the basic questions as to whether a study is normal or abnormal. *Pearls and Pitfalls in Abdominal Imaging* presents over 100 conditions in the abdomen and pelvis which can commonly cause confusion and mismanagement in daily radiological practice, providing a focused textbook that can be readily used to avoid wrong diagnoses and prevent incorrect management or even malpractice litigation. It includes 700 figures and covers all the major modalities including CT, PET/CT and MRI. The pearls and pitfalls include artifacts, anatomic variants, mimics, and a miscellany of diagnoses that are under-recognized or only recently described. Conditions are presented in anatomic order from diaphragm to the symphysis pubis, with grouping by location and organ system.

Clinical Biochemistry E-Book-William J. Marshall 2014-03-05 Essential reading for candidates for the MRCPPath examination and similar postgraduate examinations in clinical biochemistry. The book gives an overview of the acquisition of data, as well as concentrating on clinical aspects of the subject, giving detailed coverage of all conditions where clinical biochemistry is used in diagnosis and management. In common with other diagnostic specialties clinical biochemistry now uses an increasing number of techniques involving the 'new biology': these are covered in this book. It is also increasingly common for medically qualified clinical biochemists to become involved in the clinical management of patients (eg nutritional support) and material on this will be included. From the author of the popular Clinical Chemistry medical student textbook. Although there are many competing texts on clinical chemistry, the vast majority concentrate on the technology; this book concentrates on the clinical. Ideally suited for preparation for the MRCPPath and similar examination. Significant changes to content to reflect changes in how clinical chemistry services are organised and to reflect the advent of metabolic medicine as a recognised specialty. Chapter on Clinical biochemistry of nutrition to include new information on regulation of appetite and the clinical management of obesity. New chapter to bring together information on inborn errors of metabolism affecting adults. New chapter on clinical biochemistry of cardiovascular disease. The diabetes chapter has been split into two separate chapters to allow more detailed description of the practical clinical management of the disease.

Diagnostic Methods for Cirrhosis and Portal Hypertension-Annalisa Berzigotti 2018-03-23 This book provides a unique up-to-date and comprehensive overview of the most important diagnostic methods available for assessing liver cirrhosis and portal hypertension. The book covers all the significant advances made in the last 10 years in HVPG and biopsy interpretation, imaging and elastography. This is a unique and well structured book authored by senior experts in the field aimed at providing updated knowledge to the hepatology specialist and to the physicians interested in chronic liver disease. The book starts by giving an overview of the disease, outlining the clinical needs in this field; this is followed by detailed information both on the invasive gold-standard methods (HVPG measurement, liver biopsy, endoscopy), and on the standard and emerging non-invasive methods, including serum markers of fibrosis, ultrasound-elastography, magnetic resonance elastography, ultrasound, contrast-enhanced ultrasound, CT, magnetic resonance and derived methods (dynamic flow assessment). The final part of the book is devoted to diagnostic tests in non-cirrhotic causes of portal hypertension (Budd-Chiari Syndrome, Portal vein thrombosis, idiopathic portal hypertension, etc), and in pediatric portal hypertension. Written by a team of worldwide opinion leaders this book pays special attention to the most promising novel non-invasive methods in the field.
