Historical Critique of Career and Technical Education in California-Henry O'Lawrence 2013 This book provides the reader with an overview of the evolution of career and technical education in California over the 20th century and some insight as to its strengths and weaknesses as well as the challenges it faces in the new millennium. This book delves into why career and technical education/vocational education are so important and needed in California's public schools. Among the things it looks at are "What is vocational education?" "What are the benefits of vocational education, and in particular, to the student?" and "Why does California need vocational education?" Section one of this book discusses the historical foundation of career and technical education in California starting from the beginning of 1900 to 2000. Section two contains research on the 21st century workforce and the community college's CTE programs and role in the economy. This book provides a forum and voice for scholars in California. It allows us to learn and understand how career and technical education was viewed at the beginning of its foundation, its curriculum, and its impact on the California labor force today. It also looks at the labor market disadvantages we are facing due to lack of proper structures in the CTE programs across the State.

Evaluating Vehicle Emissions Inspection and Maintenance Programs-National Research Council 2001-11-16 Emissions inspection and maintenance (I/M) programs subject vehicles to periodic inspections of their emission control systems. Despite widespread use of these programs in air-quality management, policy makers and the public have found a number of problems associated with them. Prominent among these issues is the perception that emissions benefits and other impacts of I/M programs have not been evaluated adequately. Evaluating Vehicle Emissions Inspection and Maintenance Programs assesses the effectiveness of these programs for reducing mobile source emissions. In this report, the committee evaluates the differences in the characteristics of motor vehicle emissions in areas with and without I/M programs, identifies criteria and methodologies for their evaluation, and recommends improvements to the programs. Most useful of all, this book will help summarize the observed benefits of these programs and how they can be redirected in the future to increase their effectiveness.

Occupational Labor Shortages-Burt S. Barnow 2013 "Barnow, Trutko, and Piatak focus on whether persistent occupation-specific labor shortages might lead to inefficiencies in the U.S. economy. They describe why shortages arise, the difficulty in ascertaining that a shortage is present, and how to assess strategies to alleviate the shortage. Four occupations are used as test cases: 1) special education teachers, 2) pharmacists, 3) physical therapists, and 4) home health and personal care aides. For each of these occupations the authors summarize evidence that reveals whether it is currently or has recently experienced a labor shortage and suggest possible ways to alleviate the shortage if it is present. The authors close with a chapter discussing their conclusions and potential uses for occupational shortage data, including in helping determine immigration policy. They also discuss the limited nature of the occupational data currently collected by the Bureau of Labor Statistics and how the federal and state governments could expand their data collection efforts to assist policy formation."--Publisher's website.
