Experimenting for Sustainable Transport-Remco Hoogma 2005-06-29 Technological change is a central feature of modern societies and a powerful source for social change. There is an urgent task to direct these new technologies towards sustainability, but society lacks perspectives, instruments and policies to accomplish this. There is no blueprint for a sustainable future, and it is necessary to experiment with alternative paths that seem promising. Various new transport technologies promise to bring sustainability benefits. But as this book shows, important lessons are often overlooked because the experiments are not designed to challenge the basic assumptions about established patterns of transport choices. Learning how to organise the process of innovation implementation is essential if the maximum impact is to be achieved - it is here that strategic niche management offers new perspectives. The book uses a series of eight recent experiments with electric vehicles, carsharing schemes, bicycle pools and fleet management to illustrate the means by which technological change must be closely linked to social change if successful implementation is to take place. The basic divide between proponents of technological fixes and those in favour of behavioural change needs to be bridged, perhaps indicating a third way.

The Invention of the Automobile - (Karl Benz and Gottlieb Daimler)-St. John C. Nixon 2016-02-15 "... My excuse for writing this book is a desire to ventilate certain facts in relation to the early work of Karl Benz and Gottlieb Daimler of which the public is largely ignorant. Among those who have taken the trouble to investigate the early days of the motor movement, there is a certain amount of controversy as to who invented the motor vehicle, although this question has not, at the moment, extended to the general public. Inevitably it will do so, if the prevailing interest increases, in which event, it is hoped that this book will prove useful, for all the dates and facts, etc., have been fully authenticated. There are, however, several to whom I must express my sincere gratitude for the assistance they have given me. Herr Rudolf Caracciola, the winner, during the 1935 season of motor racing, of the Grand Prix of France, Belgium, Switzerland, Spain, and Tripoli, to say nothing of other triumphs, and therefore the Champion of Europe, has most kindly written a preface after reading through the manuscript. The Daimler-Benz Aktiengesellschaft of Germany has been indefatigable in providing me with material in regard to certain facts connected with the early experiments of both Benz and Daimler. Mr. Frederick R. Simms, too, has spared no effort to help me with some of the inner details of Daimler's engineering career." ( ST. John C. Nixon - September, 1936)

Embedded Security in Cars-Kerstin Lemke 2006-03-28 Most innovations in the car industry are based on software and electronics, and IT will soon constitute the major production cost factor. It seems almost certain that embedded IT security will be crucial for the next generation of applications. Yet whereas software safety has become a relatively well-established field, the protection of automotive IT systems against manipulation or intrusion has only recently started to emerge. Lemke, Paar, and Wolf collect in this volume a state-of-the-art overview on all aspects relevant for IT security in automotive applications. After an introductory chapter written by the editors themselves, the contributions from experienced experts of different disciplines are structured into three parts. "Security in the Automotive Domain" describes applications for which IT security is crucial, like immobilizers, tachographs, and software updates. "Embedded Security Technologies" details security technologies relevant for automotive applications, e.g., symmetric and asymmetric cryptography, and wireless security. "Business Aspects of IT Systems in Cars" shows the need for embedded security in novel applications like location-based navigation systems and personalization. The first book in this area of fast-growing economic and scientific importance, it is indispensable for both researchers in software or embedded security and professionals in the automotive industry.
