Histopathology of Preclinical Toxicity Studies-Peter Greaves 1990 Histopathological assessment of tissue sections is an important component of many preclinical studies which are conducted to support the safety and clinical development of novel therapeutic agents for use in the treatment of human diseases. The drug discovery process, aided by modern biotechnology, is now capable of generating highly potent, pharmacologically active agents which can give rise to quite unusual constellations of tissue pathology. The complexity and the number of histopathological findings in individual studies indicate the need for lucidity in descriptions and conclusions. In the light of these and other difficulties, this text is aimed towards bringing together into one volume a description of histopathological changes which relate to toxicity testing of therapeutic agents in the usual test species: rat, mouse, dog and non-human primate. This book is an excellent starting point for the analysis of drug-induced findings in toxicity studies.

RNA Vaccines-Thomas Kramps 2016-12-17 This volume provides an overview of the field and practical hints for vaccinologists in academia and industry. Chapters provide protocols on self-replicating RNA vectors, non-replication mRNA vectors, adjuvantation and delivery, and preclinical and clinical development. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and cutting-edge, RNA Vaccines: Methods and Protocols aims to increased collaboration on RNA vaccines between basic and applied scientists in academia, government, and industry to develop future solutions for today's challenges.

Endotoxin and the Lungs-Kenneth Brigham 1994-07-15 This work sets out to provide the information necessary for understanding endotoxin and its effects on the lungs, and explicates the difficulties in determining how to manipulate endotoxin pathology. The rationale for, and efficacy of, current and experimental treatments for sepsis, adult respiratory distress syndrome and other endotoxin-induced lung injuries are discussed.

Scleroderma-John Varga 2016-11-07 Comprised of the authoritative work of international experts, this fully-updated second edition of Scleroderma builds upon the well-regarded approach in the first edition to provide integrated, concise, and up-to-date synthesis of current concepts of pathogenesis and modern approaches to management of systemic sclerosis (scleroderma). With a multidisciplinary approach to comprehensive care, this book is easily accessible for health care professionals in many fields. The new edition includes extensive updated material based on major developments in the field, with new chapters on personalized medicine, cancer complications, global perspectives on scleroderma, and more. It presents a succinct and thoughtful synthesis of current pathomechanistic concepts, providing a valuable reference tool for basic and translational investigators working in the field. Scleroderma: From Pathogenesis to Comprehensive Management serves as an essential, all-inclusive resource for rheumatologists, pulmonologists, cardiologists, gastroenterologists, nephrologists and all those involved in the care of scleroderma patients. Signaling by Toll-Like Receptors-Gregory W. Konat 2008-06-20 The discovery of toll-like receptors (TLRs) spurred the field of innate immunity into a renaissance after many years of neglect. Since then, TLR research has grown at an exponential rate. Taking an integrated methodological approach, Signaling by Toll-Like Receptors offers a comprehensive review of important techniques in molecular biology, cell biology, biochemistry, genetics, and immunology and their critical application to the study of toll-like receptor structure, biological function, and the intracellular signaling triggered by these receptors.

α -Aminoacid-N-Carboxy-Anhydrides and Related Heterocycles-Hans R. Kricheldorf 2012-12-06

Poly(lactic acid) Science and Technology-Alfonso Jiménez 2014-11-13 Biodegradable polymers from renewable resources are sought after for many purposes, from packaging materials in food to biomedical applications. Poly (lactic acid) (PLA) is a well-known biopolymer derived from corn starch or sugar cane used in different food packaging and artificial bones and scaffolds. Poly(lactic acid) Science and Technology first introduces the basic concepts of PLA and then covers PLA synthesis and polymerization, processing, characterization and physical properties of PLA, PLA-based nano-biocomposites, the main applications in active packaging and as biomaterials for tissue engineering, degradation and biodegradation of PLA and finally industrial and legislative issues. This interdisciplinary approach provides readers with a general overview of all relevant aspects related to PLA including fundamental issues, innovative applications, new types of processing and emerging applications, modification of PLA, life cycle assessment, bio-additives, bio/degradation and sustainability and international regulations. Experts provide a complete resource and whole perspective on PLA covering scientific, ecological, social and economic issues. The book will appeal to chemists, food technologists and materials engineers as well as researchers interested in bio-based and biodegradable polymers and composites. Bioactive Essential Oils and Cancer-Damião Pergentino de Sousa 2015-09-10 This volume provides a general overview of the therapeutic potential of the essential oils in cancer and highlights some promising future directions. It integrates chemistry, pharmacology, and medicine while discussing bioactive essential oils in experimental models and clinical studies of cancer. The book is a valuable resource for all engaged in the study of natural products and their synthetic derivatives, particularly for those interested in academic research and pharmaceutical and food industries dedicated in the discovery of useful agents for the therapy or prevention of cancer.

Titanium in Medicine-D.M. Brunette 2012-12-06 Providing scientific and technical in-depth information in a clear format with a homogeneous structure, this text is suited for educational and self-teaching purposes as well as a reference on titanium for biomedical applications. It covers the whole area relevant to the use of titanium for implants, devices and instruments in medicine: material and surface science, physics, chemistry, biology, medicine, quality and regulatory aspects.

Prospects for Chemoprevention of Colorectal Neoplasia-Andrew T. Chan 2012-08-15 The prevention of colorectal cancer is a subject of increasing medical importance, and there have been a number of promising recent developments. This book examines in detail important aspects of the current status and future prospects for chemoprevention of colorectal tumors. Research into the mechanisms that lead from early colorectal adenoma to colorectal cancer is discussed. The role and modes of action of available drugs such as celecoxib and sulindac are described, and recent data from aspirin trials are analyzed. In addition, the possible impact of nutritional agents with anti-inflammatory properties is considered, and strategies applicable in those with a high level of genetic risk are evaluated. An important feature of the book is its holistic perspective, making it relevant for gastroenterologists, internists, general practitioners, oncologists, colorectal and gastroenterological surgeons, and public health practitioners.

Glutathione In The Nervous System-Christopher Ari Shaw 2017-10-25 The goal of this text is to focus readers attention on three major areas; the origin and localization of GSH in the nervous system; the multiple effects of GSH on neural health activity; and the potential for alterations on GSH status to lead to neurological damage of the type observed in amyotrophic lateral sclerosis, Parkinson's disease and other neurological disorders. The text also touches upon the additional roles of the antioxidant GSH, including possible neurotransmitter action, redox modulation of ionotropic receptor function, and neuroprotection against excitotoxic actions of glutamate.

Stress and Animal Welfare-D.M. Broom 2016-08-22 Stress and Animal Welfare provides students of animal biology with a fresh, integrated coverage of the concepts and scientific measurement of the welfare of animals. This book is the first to explain the basic biological principles of how animals actually cope with stress, and the major part of the work is devoted to explaining scientifically usable concepts in stress and welfare. A wide range of stress indicators are highlighted in detail with examples being drawn from man and other species. This information forms the basis for a synthesis of new ideas presented here for the first time. Among the issues covered are: •how physical systems are regulated by the body and brain; •limits to adaptation •assessing welfare for both short-term and long-term responses; •ethical problems and suggested solutions Proper assessment of animal welfare is essential so that informed decisions can be taken about what is morally acceptable in terms of practice and in the development of more effective legislation. This text encapsulates a very wide body of literature on scientific aspects of animal welfare, and will prove a valuable asset for students and teachers of animal biology.

Diagnostic Histopathology of Tumors-Christopher D. M. Fletcher 2007-03-29 Up to date and comprehensive, the New Edition of Fletcher's renowned Diagnostic Histopathology of Tumors provides you with today's best knowledge on the pathologic diagnosis of human tumors. This 3rd edition incorporates all of the latest ancillary diagnostic and prognostic techniques so you can effectively evaluate and confidently interpret suspected tumor specimens. Plus, more than 50 internationally recognized authorities and over 3,100 full-color illustrations provide you with an up-to-date account of tumor morphology, the application of modern diagnostic techniques (including molecular genetics), and key aspects of differential diagnosis. Features over 3,000 high-quality full-color illustrations, providing visual guidance to each tumor or tumor-like entity. Presents correlations of gross appearances to microscopic findings for virtually every tumor type. Includes detailed discussions of differential diagnosis. Provides full coverage of all the latest classification schemes. Incorporates the latest advances in molecular biology and immunohistochemistry throughout. Presents an increased focus on everyday diagnostic problems you are likely to encounter. Features extensively rewritten gynecology and hematology chapters. Uses additional diagnostic flow charts and summary tables for easy retrieval of information. Includes more differential diagnosis tables for better recognition and evaluation of similar looking entities.

Synthetic Messenger RNA and Cell Metabolism Modulation-Peter M. Rabinovich 2013-01-08 Synthetic mRNA is an attractive tool for mammalian cell reprogramming that can be used in basic research, as well as in clinical applications. Present mRNA in vitro synthesis is a rather simple procedure, which delivers a high yield of quality product. Various modifications may be introduced into the mRNA by changing the sequence of the DNA template, by modifying the reaction of transcription, or by post-transcriptional modification. mRNA, as a transfection agent, has several advantages over DNA, as mRNA expression is not dependent on nuclear entry and occurs directly in the cytosol. Synthetic Messenger RNA and Cell Metabolism Modulation: Methods and Protocols covers the typical main methods, such as mRNA synthesis, modifications, and delivery. Examples of cell reprogramming and analysis in the fields of immunotherapy and stem cell research are also included. Written in the successful Methods in Molecular Biology™ series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on troubleshooting and avoiding known pitfalls. Authoritative and easily accessible, Synthetic Messenger RNA and Cell Metabolism Modulation: Methods and Protocols will be of interest to researchers, clinicians, and biotech companies interested in mRNA-mediated cell reprogramming.

Calcium as a Cellular Regulator-Professor Institute of Biochemistry Ernesto Carafoli 1999 Encompassing all aspects of calcium signalling, from methods of measuring calcium in cells to the molecular mechanisms for decoding its information, this comprehensive book balances historical aspects and state of the art developments.

Cancer Cell Biology-Takeo Nagayo 1981

Encyclopedia of Animal Behavior-Marc Bekoff 2004

From Jailer to Jailed-Bernard B. Kerik 2015-03-31 The controversial New York City police commissioner and New York Times bestselling author of The Lost Son shares the story of his fall from grace and the effects of his incarceration on his views of the American justice system. Bernard Kerik was New York City's police commissioner during the 9/11 attacks, and became an American hero as he led the NYPD through rescue and recovery efforts of the World Trade Center. His résumé as a public servant is long and storied, and includes receiving a Medal of Honor. In 2004, Kerik was nominated by George W. Bush to head the Department of Homeland Security. Now, he is a former Federal Prison Inmate known as #84888-054. Convicted of tax fraud and false statements in 2007, Kerik was sentenced to four years in federal prison. Now, for the first time, he talks candidly about what it was like on the inside: the torture of solitary confinement, the abuse of power, the mental and physical torment of being locked up in a cage, the powerlessness. With newfound perspective, Kerik makes a plea for change and illuminates why our punishment system doesn't always fit the crime. In this extraordinary memoir, Kerik reveals his unprecedented view of the American penal system from both sides: as the jailer and the jailed. With astonishing candor, bravery, and insider's intelligence, Bernard Kerik shares his fall from grace to incarceration, and turns it into a genuine and uniquely insightful argument for criminal justice reform.

The Nine-Banded Armadillo-Colleen M. McDonough 2013-03-18 The word armadillo is Spanish for "little armored one." This midsize mammal that looks like a walking tank is a source of fascination for many people but a mystery to almost all. Dating back at least eleven million years, the nocturnal, burrowing insectivore was for centuries mistaken for a cross between a hedgehog and a turtle, but it actually belongs to the mammalian superorder Xenarthra that includes sloths and anteaters. Biologists W. J. Loughry and Colleen M. McDonough have studied the nine-banded armadillo (*Dasypus novemcinctus*) for more than twenty years. Their richly illustrated book offers the first comprehensive review of everything scientists know about this unique animal. Engaging both scientists and a broader public, Loughry and McDonough describe the armadillo's anatomy and physiology and all aspects of its ecology, behavior, and evolution. They also compare the nine-banded armadillo with twenty or so other, related species. The authors pay special attention to three key features of armadillo biology—reproduction, disease, and habitat expansion—and why they matter. Armadillos reproduce in a unique and puzzling manner: females always give birth to litters of genetically identical quadruplets, a strategy not found in any other vertebrates. Nine-banded armadillos are also the only vertebrates except for humans known to contract leprosy naturally. And what about habitat expansion? The authors suggest that the armadillo's remarkable spread across the southeastern United States may be the consequence of its most notable feature: a tough, protective carapace. Biologists, evolutionists, students, and all those interested in this curious creature will find The Nine-Banded Armadillo rich in information and insight. This comprehensive analysis will stand as the definitive scientific reference for years to come and a source of pleasure for the general public.

Epigenetics in Cardiovascular Disease-Yvan Devaux 2021-03-01 Epigenetics in Cardiovascular Disease, a new volume in the Translational Epigenetics series, offers a comprehensive overview of the epigenetics mechanisms governing cardiovascular disease development, as well as instructions in research methods and guidance in pursuing new studies. More than thirty international experts provide an (i) overview of the epigenetics mechanisms and their contribution to cardiovascular disease development, (ii) high-throughput methods for RNA profiling including single-cell RNA-seq, (iii) the role of nucleic acid methylation in cardiovascular disease development, (iv) epigenetic actors as biomarkers and drug targets, (v) and the potential of epigenetics to advance personalized medicine. Here, readers will discover strategies to combat research challenges, improve quality of their epigenetic research and reproducibility of their findings. Additionally, discussion of assay and drug development for personalized healthcare pave the way for a new era of understanding in cardiovascular disease. Offers a thorough overview of role of epigenetics mechanisms in cardiovascular disease Includes guidance to improve research plans, experimental protocols design, quality and reproducibility of results in new epigenetics research Explores biomarkers and drug targets of therapeutic potential to advance personalized healthcare Features chapter contributions from a wide range of international researchers in the field

Laser-induced Interstitial Thermotherapy-Gerhard J. Müller 1995

Principles of Medical Physiology-Sabyasachi Sircar 2008 This book has been specifically designed with the needs of the student in mind. Lengthy explanations are avoided and the material is presented in a concise form that not only makes it easy to understand but also easy to remember and reproduce, which is precisely what the student needs. Difficult topics are presented with elegant simplicity and brevity without compromising on the core concepts. These include membrane electrophysiology, electromyography, hemostatic balance, electrocardiography, cardiac output, hemodynamics, respiratory mechanics, counter-current multiplier system, body fluid and electrolyte balance, gastric acid secretion, calcitropic hormones, fetoplacental unit, memory and learning, synaptic transmission and sensorimotor mechanisms.

Nanocolloids-Margarita Sanchez-Dominguez 2016-03-09 Nanocolloids: A Meeting Point for Scientists and Technologists presents an easy-to-read approach to current trends in nanoscale colloid chemistry, which offers relatively simple and economically feasible ways to produce nanomaterials. Nanocolloids have been the subjects of major development in modern technology, with many current and future applications. The book helps scientists and technologists to understand the different aspects of modern nanocolloid science. It outlines the underlying fundamental principles of nanocolloid science and covers applications ranging from emulsions to dispersions and suspensions. You will find details on experimental techniques and methods for the synthesis and characterization of nanocolloids, including the latest developments in nanoemulsions and nanoparticles. Edited by leading academics with over 10 years' experience in the field of colloid and surfactant science. Each chapter is authored by recognized experts in the field. Outlines the underlying fundamental science behind nanocolloids. Provides comprehensive coverage of current topics and potential applications in nanocolloid science. Presents a multidisciplinary approach to help chemical engineers, chemists, physicists, materials scientists and pharmacologists, form an in-depth understanding of nanocolloid science.

Germ Cell Protocols-Heide Schatten 2004-03-24 The study of germ cells has undergone enormous advances in recent years and has entered into an explosive phase of new discoveries with the introduction of transgenic technologies and nuclear cloning. Basic knowledge and techniques developed for lower vertebrate and invertebrate systems have facilitated the study of higher vertebrates, including humans. Many experiments that have first been performed on lower vertebrates provided the tools and strategies that could later be applied to other less readily available mammalian systems. The discovery of centrosomes in ascidians and sea urchin eggs now benefits studies of fertility and infertility in mammals including humans. External in vitro fertilization, now a common technique in assisted fertilization has only been possible as a result of numerous studies in lower systems in which external fertilization is natural. Egg activation, first explored in sea urchin and ascidian eggs, now benefits cloning efficiency in farm and domestic animals. Gene manipulations and molecular methods have added to the possibilities of producing live offspring with enormous biomedical, ecological, and economic implications. All sexually reproducing organisms produce primordial germ cells, a small population of cells that differentiate into gametes of either sex that carry to potency, an ability to develop into an entire new organism. The two volumes on germ cells combine techniques in a variety of different systems and have selected those systems that have provided landmarks in advancing our knowledge on germ cells.

Oxidative Stress and Chronic Degenerative Diseases-Jose Antonio Morales-Gonzalez 2013-05-22 This work responds to the need to find, in a sole document, the affect of oxidative stress at different levels, as well as treatment with

antioxidants to revert and diminish the damage. Oxidative Stress and Chronic Degenerative Diseases - a Role for Antioxidants is written for health professionals by researchers at diverse educative institutions (Mexico, Brazil, USA, Spain, Australia, and Slovenia). I would like to underscore that of the 19 chapters, 14 are by Mexican researchers, which demonstrates the commitment of Mexican institutions to academic life and to the prevention and treatment of chronic degenerative diseases.

Oxidative Stress and Aging-Richard G. Cutler 1995

Bone Repair Biomaterials-J A Planell 2009-08-26 Bone repair is a fundamental part of the rapidly expanding medical care sector and has benefited from many recent technological developments. With an increasing number of technologies available, it is vital that the correct technique is selected for specific clinical procedures. This unique book will provide a comprehensive review of the materials science, engineering principles and recent advances in this important area. The first part of the book reviews the fundamentals of bone repair and regeneration. Chapters in the second part discuss the science and properties of biomaterials used for bone repair such as metals, ceramics, polymers and composites. The final section of the book discusses clinical applications and considerations with chapters on such topics as orthopaedic surgery, tissue engineering, implant retrieval and ethics of bone repair biomaterials. With its distinguished editors and team of international contributors, Bone repair biomaterials is an invaluable reference for researchers and clinicians within the biomedical industry and academia. Provides a comprehensive review of the materials science, engineering principles and recent advances in this important area Reviews the fundamentals of bone repair and regeneration addressing social, economic and clinical challenges Examines the properties of biomaterials used for bone repair with specific chapters assessing metals, ceramics, polymers and composites

Handbook of Self Assembled Semiconductor Nanostructures for Novel Devices in Photonics and Electronics-Mohamed Henini 2011-07-28 The self-assembled nanostructured materials described in this book offer a number of advantages over conventional material technologies in a wide range of sectors. World leaders in the field of self-organisation of nanostructures review the current status of research and development in the field, and give an account of the formation, properties, and self-organisation of semiconductor nanostructures. Chapters on structural, electronic and optical properties, and devices based on self-organised nanostructures are also included. Future research work on self-assembled nanostructures will connect diverse areas of material science, physics, chemistry, electronics and optoelectronics. This book will provide an excellent starting point for workers entering the field and a useful reference to the nanostructured materials research community. It will be useful to any scientist who is involved in nanotechnology and those wishing to gain a view of what is possible with modern fabrication technology. Mohamed Henini is a Professor of Applied Physics at the University of Nottingham. He has authored and co-authored over 750 papers in international journals and conference proceedings and is the founder of two international conferences. He is the Editor-in-Chief of Microelectronics Journal and has edited three previous Elsevier books. Contributors are world leaders in the field Brings together all the factors which are essential in self-organisation of quantum nanostructures Reviews the current status of research and development in self-organised nanostructured materials Provides a ready source of information on a wide range of topics Useful to any scientist who is involved in nanotechnology Excellent starting point for workers entering the field Serves as an excellent reference manual

ABC Animals-Flowerpot Press 2016-04-01 Join your favorite furry friends from the animal kingdom as they guide young readers through the alphabet in this charming picture book. The beautifully hand-drawn illustrations makes learning the A,B,Cs more fun than ever before and is sure to engage early learners! The book also comes with a poster displaying all of the animals and the letters they represent!

Tea-K.C. Willson 2012-12-06 Tea is a unique crop and, incidentally, a very interesting and attractive one. The tea bush, its cultivation and harvesting do not fit into any typical cropping pattern. Moreover, its processing and marketing are specific to tea. Thus the Tea Industry stands apart and constitutes a self contained entity. This is reflected in the title given to this book, Tea: Cultivation to consumption, and its treatment of the subject. The book is logically planned - starting with the plant itself and finishing with the traditional'cuppa'. Every aspect of tea production is covered, inevitably some in greater detail than others. However, it gives an authentic and comprehensive picture of the tea industry. The text deals in detail with cultural practices and research, where desirable, on a regional basis. The technology of tea cultivation and processing has been developed within the industry, aided by applied research which was largely financed by the tea companies themselves. This contributed to a technically competent industry but tended to bypass the more academic and fundamental investigations which might bring future rewards. The sponsorship of research has now widened and the range and depth of tea research has increased accordingly. The editors and authors of this book have played their part in these recent developments which are well reported in the book.

Abelha urucu- 1996

The Biology of the Xenarthra-Sergio F. Vizcaino 2008 The Xenarthra are an order of the mammals consisting of the armadillos, anteaters, and sloths. The Biology of the Xenarthra is the first authoritative study of the Xenarthra in a generation. The volume features an impressive group of international scholars who explore the current biology and ecological status of these mammals in each of the geographic regions they inhabit. Many of these populations reside in developing countries, and before now, information on these species has been scarce. Topics cover a wide array of issues including genetics, physiology, behavior, ecology, and conservation. Discussions range from paleontological perspectives on xenarthran evolution to both lab and field-based studies of living species. Contemporary research in areas such as genome sequencing and leprosy in armadillos is also included.

Acid Soil and Acid Rain-I. R. Kennedy 1992-06-09 Examines the basic chemical processes involved in acidification in order to better assess their long-term effects on the status of soils, the health of plants and other living species that depend on them. Discusses acidity, pH and protons--their significance in bioenergetics and the consequent role of autotrophic organisms in acidifying ecosystems. The Second Edition incorporates and integrates recent findings that render more explanations of the causes of the environmental impacts of acidity, especially in forests and lakes. Also explores current research into acid rain and soil in order to devise appropriate measures for their amelioration. Features numerous case studies and a bibliography that has doubled in size.

Walking the Road-Dermot Bolger 2007 Lance Corporal Francis Ledwidge lost his life in Flanders Fields, 1917, while serving with the British army in WWI. One of Ireland's finest poets, Ledwidge left the familiarity of his Co. Meath home and loved ones and joined the British army to follow the fate of so many other young men of that doomed generation. Hovering in the hazy half-light of memories and regrets and marking the 90th anniversary of the 3rd Battle of Ypres in 1917, this beautiful new play by Dermot Bolger follows Francis Ledwidge's final journey as he finds himself 'walking the road' alongside all of those who had touched his life. But where is Francis walking to? And will any of them ever see home?

Elections 2014-Ed Schulz-Herzenberg 2015-02-01 As voters articulate their judgments of the parties and leaders in their fifth democratic election, Election 2014 South Africa: The Campaigns, Results & Future Prospects provides a platform for in-depth discussion and analysis of party campaigns, voting patterns, and election results of the 2014 general elections. Following the tradition of previous volumes that cover South Africa's national and provincial elections since 1994, this book draws on the expertise of renowned authors to cover important aspects of the election, including the major political party campaigns, the media's coverage of the campaigns, the latest trends in political participation and party fortunes, gender dynamics, the black middle class, as well as insights into the voter and public opinion on the eve of the election. Readers are presented with more than a mere study of a single election; they are also presented with a contemporary understanding of electoral politics and democracy in South Africa over two democratic decades and reflections on how elections strengthen the quality and prospects for democracy.

Photodynamic Therapy-Charles J. Gomer 2016-08-23 Biological interactions of visible light with photosensitizers have been studied for over a century while controlled clinical applications of light and photosensitizers to treat solid tumors, known as photodynamic therapy, have been evolving since the mid 1970's. In Photodynamic Therapy: Methods and Protocols, leading PDT scientists and clinicians provide the first comprehensive collection of methods and protocols specifically related to relevant mechanistic, dosimetric, preclinical, and clinical procedures used in current PDT research. Reflecting the growing number of studies demonstrating that immunological, tumor microenvironmental, and vascular responses are all contributing to PDT treatment outcomes, the contents of this volume move beyond the more traditional PDT concepts in order to investigate the numerous signal transduction and cell death pathways involved. Written in the highly successful Methods in Molecular Biology™ series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and notes which highlight tips on troubleshooting and avoiding known pitfalls. Authoritative and cutting-edge, Photodynamic Therapy: Methods and Protocols is an ideal guide for new investigators just starting out in PDT research as well as seasoned investigators changing the direction of their research with the intention of exploring this vital field of study.

Xeelee: An Omnibus-Stephen Baxter 2010-03-18 Stephen Baxter's epic sequence of Xeelee novels was introduced to a new generation of readers with his highly successful quartet, Destiny's Children, published by Gollancz between 2003 and 2006. But the sequence of novels began with RAFT in 1991. From there it built into perhaps the most ambitious fictitious universe ever created. Beginning with the rise and fall of sub-quantum civilisations in the first nano-seconds after the Big Bang and ending with the heat death of the universe billions of years from now the series charts the story of mankind's epic war against the ancient and unknowable alien race the Xeelee. Along the way it examines questions of physics, the nature of reality, the evolution of mankind and its possible future. It looks not just at the morality of war but at the morality of survival and our place in the universe. This is a landmark in SF.

Journal-PlainSimpleBooks 2018-08-27 A Blank Book Journal or Diary to keep thoughts and ideas. Bound paperback book with 150 grayscale lined and numbered pages to fill any way you want. Book opens easily for comfortable writing with ample margins for extra notations or doodling. Perfect for bullet journaling. Art on cover is the Milky Way.
