First International Conference on Building Electrical Technology (BETNET)- 2004 The earthing and bonding of an electrical installation is generally considered a complex and sometimes ambiguous subject for many who are involved in electrical facility engineering. For this one day workshop, the IEE Building Electrical Technology Professional Network (BETNET) invited a group of eminent speakers to present the basic concepts and applications necessary for the design and construction of earthing and bonding networks to meet personnel safety and functional needs (e.g., in hazardous locations or ITE applications) of buildings. This tutorial provides quality information to everyone involved in earthing and bonding design, enabling them to make informed decisions, ensuring installations are safe and reliable. This is a unique course and the only one in its field to be focussed on this topic. It enables participants to: Identify the correct usage of earthed (or unearthed) systems to prevent electrical shock hazards; Become more familiar with the requirements for earthing and bonding to comply with BS7671: 2001; Specify the correct earthing and bonding requirements for power quality, general safety, hazardous locations and information technology equipment (ITE) applications; Through a number of example cases presented, be able to differentiate 'Clean Earth', 'low noise earth' and 'functional earth' from 'Safety earth?'; and with the aid of a main earthing busbar and appropriate bonding networks, to avoid bad practices of groundloops.

Hughes Electrical Technology-Edward Hughes 1995 A comprehensive introduction to electrical and electronic engineering. Risk and Society: The Interaction of Science, Technology and Public Policy-M Waterstone 2012-12-06 Life in the last quarter of the twentieth century presents a baffling array of complex issues. The benefits of technology are arrayed against the risks and hazards of those same technological marvels (frequently, though not always, arising as side effects or by-products). This confrontation poses very difficult choices for individuals as well as for those charged with making public policy. Some of the most challenging of these issues result because of the ability of technological innovation and deployment to outpace the capacity of institutions to assess and evaluate implications. In many areas, the rate of technological advance has now far outstripped the capabilities of institutional monitoring and control. While there are many instances in which technological advance occurs without adverse consequences (and in fact, yields tremendous benefits), frequently the advent of a major innovation brings a wide array of unforeseen and (to some) undesirable effects. This problem is exacerbated as the interval between the initial development of a technology and its deployment is shortened, since the opportunity for cautious appraisal is decreased.

Electrical Circuit Theory and Technology-John Bird 2003-01-20 Electrical Circuit Theory and Technology is a fully comprehensive text for courses in electrical and electronic principles, circuit theory and electrical technology. The coverage takes students from the fundamentals of the subject, to the completion of a first year degree level course. Thus, this book is ideal for students studying engineering for the first time, and is also suitable for pre-degree vocational courses, especially where progression to higher levels of study is likely. John Bird's approach, based on 700 worked examples supported by over 1000 problems (including answers), is ideal for students of a wide range of abilities, and can be worked through at the student's own pace. Theory is kept to a minimum, placing a firm emphasis on problem-solving skills, and making this a thoroughly practical introduction to these core subjects in the electrical and electronic engineering curriculum. This revised edition includes new material on transients and laplace transforms, with the content carefully matched to typical undergraduate modules. Free Tutor Support Material including full worked solutions to the assessment papers featured in the book will be available at <http://textbooks.elsevier.com/>. Material is only available to lecturers who have adopted the text as an essential purchase. In order to obtain your password to access the material please follow the guidelines in the book.
