Chimpanzees in Biomedical and Behavioral Research-National Research Council 2011-12-05 For many years, experiments using chimpanzees have been instrumental in advancing scientific knowledge and have led to new medicines to prevent life-threatening and debilitating diseases. However, recent advances in alternate research tools have rendered chimpanzees largely unnecessary as research subjects. The Institute of Medicine, in collaboration with the National Research Council, conducted an in-depth analysis of the scientific necessity for chimpanzees in NIH-funded biomedical and behavioral research. The committee concludes that while the chimpanzee has been a valuable animal model in the past, most current biomedical research use of chimpanzees is not necessary, though noted that it is impossible to predict whether research on emerging or new diseases may necessitate chimpanzees in the future.

Abiotic and Biotic Stress in Plants-Arun Shanker 2016-02-17 The impact of global climate change on crop production has emerged as a major research priority during the past decade. Understanding abiotic stress factors such as temperature and drought tolerance and biotic stress tolerance traits such as insect pest and pathogen resistance in combination with high yield in plants is of paramount importance to counter climate change related adverse effects on the productivity of crops. In this multi-authored book, we present synthesis of information for developing strategies to combat plant stress. Our effort here is to present a judicious mixture of basic as well as applied research outlooks so as to interest workers in all areas of plant science. We trust that the information covered in this book would bridge the much-researched area of stress in plants with the much-needed information for evolving climate-ready crop cultivars to ensure food security in the future.

Sustainable Food Production Practices in the Caribbean-Wayne G. Ganpat 2012 Sustainable Food Production Practices in the Caribbean addresses the issue of sustainable agriculture from a practical perspective. Although the scientific and technological aspects are given attention, the authors use their accumulated research and field experiences to focus on tested, simple production systems and practices that sustain soil fertility, ecosystems and people. In so doing, they consistently advocate crop and livestock production techniques that require an agro-ecological approach, aimed at reducing the use of water, chemicals and pesticides and the preservation of the region's soils. This volume fills a void in this important area of Caribbean development: from the large scale farming organizations to the small farming communities that are the backbone of agriculture in the region; from undergraduates at the newly energized Faculty of Food and Agriculture at the University of the West Indies, St Augustine campus and other tertiary agriculture training institutions around the region to a young generation of students who now have the opportunity to sit for the new examination in Food and the Environment offered by the Caribbean Examinations Council at advanced (CAPE) certificate level. This book will also be a useful tool for agriculture extension officers and policymakers who are called upon to provide advice and leadership in the promotion of sustainable food production in the Caribbean. The 20 chapters in Sustainable Food Production Practices are comprehensive in their coverage of issues that go beyond primary food production to include often neglected areas such as post harvest, quality assurance, local regional and international marketing, post-production methods and systems and sustainable nutritional practices. Throughout, the emphasis is on simple, jargon-free descriptions, instructions and recommendations, supported by a variety of charts, tables and numerous full-colour photographs that richly illustrate key elements of the text.

The Role of Matrix Metalloproteinase in Human Body Pathologies-Francesco Travascio 2017-12-20 Matrix metalloproteinases (MMPs) are a family of proteolytic zinc-containing enzymes involved in physiological as well as in pathological processes in the human organism. MMPs play a key role in the remodeling of the extracellular matrix. Such a process may occur because of tissue homeostasis, morphogenesis, and tissue repair. However, remodeling could also be a part of many pathological states such as arthritis, cardiovascular diseases, neurodegenerative diseases, or impaired development in congenital anomalies. This book overviews the role of MMPs in different pathologies affecting the

human body.
