Motorized Obsessions-Paul R. Josephson 2007-08-22 From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.  
The Marine Electrical and Electronics Bible-John C. Payne 1998 More and more sailors and powerboaters are buying and relying on electronic and electric devices aboard their boats, but few are aware of proper installation procedures or how to safely troubleshoot these devices if they go on the blink.

Dictionary of Civil Engineering-Jean-Paul Kurtz 2004-09-14 I am pleased to present a work which marks a milestone in the history of public works and, more precisely, in that of permanent structures—a comprehensive dictionary of Civil Engineering terms. Since the beginning of time, Man has always tried to find a means to clear the obstacles which nature erected to displace him. With the first tree trunk thrown across a river, man sought to improve the crossing structure. After the invention of the wheel, and to satisfy his thirst for conquest (Roman ways), and comfort (aqueducts), man built bridges that became a preremptory necessity to move quickly. Thus, Man started to build wooden and masonry works. With the passing centuries, the builders became masters in the art of building masonry works. Then came the Industrial Revolution and the advent of the steel (1864), which was closely followed by the invention of the reinforced concrete (1855). The need for railways and improving the road network inspired great works of crossing such as viaducts and tunnels. The boom of the railway network and the development of the car required the construction of an increasing number of new structures. This phenomenon continues today with hundreds of structures built each year throughout the world.

With this guide you will gain a better understanding of the ignition components and how the ignition system operates and learn how to quickly determine if your problem is electrical or mechanical. CDI Electronics has been the leader in outboard marine ignition technology since 1982.

Street-Smart Entrepreneur-Jay Goltz 2013-03-01 Small firms in Chicago employ more than 1.6 million individuals—nearly 50 percent of the private work force, according to a new study released this fall by the Small Business Administration. The survey, which defines small firms as those employing less than 500 people, also shows that these businesses generate 47 percent of the area's total receipts of \$278 billion dollars. However, SBA statistics also reveal that, on average, of the small businesses starting today, 53 percent will not be in business four years from now. Of these closings, it's estimated that 15 percent will close due to business failures. Chicago businessman Jay Goltz understands what it takes for a small business to succeed. During the past twenty years he has owned and operated Artists' Frame Service in Chicago. Goltz started the business in 1978, and today it's the largest, custom retail picture framing facility in the world. Now, Goltz shares some his secrets of success.

The Adlard Coles Book of Outboard Motors-Melanie Bartlett 2012-11-30 Aimed at boatowners rather than experienced mechanics, The Adlard Coles Book of Outboard Motors is a boon to anyone who puts to sea with an outboard engine. Covering both 2 and 4 stroke engines, the book explains how even the most sophisticated of modern outboards use simple processes to convert fuel to power, and then looks at each of the sub-systems that allow those processes to take place: - the fuel system - the ignition system - cooling and lubrication - the electrical system - transmission and controls The book includes sections on routine maintenance and fault finding, and even has a photo sequence showing the vital first aid required to save the life of an outboard engine that has been dropped overboard! 'Explains in clear, jargon-free English how an outboard works and how to look after it' Kelvin Hughes 'An excellent book, well thought out and well written' Motorboats Monthly

The Propeller Handbook: The Complete Reference for Choosing, Installing, and Understanding Boat Propellers-Dave Gerr 2001-07-02 On the surface, choosing the correct propeller for a particular boat seems simple. But one factor affects another, which then affects another factor, leading many boaters to believe that propeller selection depends more on black magic than logic. All the questions are answered in this complete reference, the first of its kind. This clear, easy-to-use handbook for all small boats is written not for Ph.D.s seeking the latest wrinkle in high-tech propeller design, but as a practical aid for the average mechanic, engineer, boatbuilder, fleet operator, serious yachtsman, or naval architect.

The Elements of Boat Strength: For Builders, Designers, and Owners-Dave Gerr 1999-08-31 "This work is significant. It is the first to include a method of assessing structural strength in the context of the modern marine environment." --Commander M. C. Cruder, U.S. Coast Guard Acclaimed author and naval architect Dave Gerr created this unique system of easy-to-use scantling rules and rules-of-thumb for calculating the necessary dimensions, or scantlings, of hulls, decks, and other boat parts, whether built of fiberglass, wood, wood-epoxy composite, steel, or aluminum. In addition to the rules themselves, The Elements of Boat Strength offers their context: an in-depth, plain-English discussion of boatbuilding materials, methods, and practices that will guide you through all aspects of boat construction. Now you can avoid wading through dense technical engineering manuals or tackling advanced mathematics. The Elements of Boat Strength has all the formulas, tables, illustrations, and charts you need to judge how heavy each piece of your boat should be in order to last and be safe. With this book, an inexpensive scientific calculator, and a pad of paper, you'll be able to design and specify all the components necessary to build a sound, long-lasting, rugged vessel. What reviewers have said about Dave Gerr's books: Propeller Handbook "By far the best book available on the subject."--Sailing "The best layman's guide we've ever read."--Practical Sailor Dave Gerr and International Marine made a complicated topic understandable and put it into a handbook that is easy to use."--WoodenBoat "Without doubt the definitive reference for selecting, installing, and understanding boat propellers."--Royal Navy Sailing Association Journal The Nature of Boats "If you are not nautically obsessed before reading this book, you will most certainly be afterward."--Sailing Fascinating potpourri of information about today's boats, modern and traditional."--WoodenBoat  
Ordering Chaos-Bridget K. Balint 2009 From c. 1100 until c. 1170, Latin prosimetrical texts characterized by dialogue, allegory, and philosophical speculation enjoyed a notable popularity within the cultural ambit of the French cathedral schools. Inspired by Boethius (TM) "Consolation of Philosophy," the prosimetrum writers applied his literary techniques to the ethical and anthropological concerns of their own era, producing texts of great artistry in the process. This book investigates the rise of the Boethian impulse in Latin, the innovations of the twelfth-century writers, the difficulties that arose when they attempted to recapture the certainty that characterized the "Consolation," and the survival of aspects of this literary mode in later Latin and vernacular literature.  
Surprised at Being Alive-Robert F. Curtis 2014-12-30 Sometimes you do everything right, but it just isn't your day. A part fails and your helicopter comes apart in flight, or, another aircraft runs into you and the pieces of both fall to the ground below, or the enemy gunner pulls the trigger at just the right moment and his rounds find your aircraft in exactly the right spot to take it out of the sky. Whichever way it happens, it wasn't your day. Which is why, after 24 years and over 5,000 flight hours with four armed services, Major Robert Curtis was so surprised at being alive when he passed his retirement physical. Starting with enlisting in the Army to fly helicopters during Vietnam, and continuing on through service with the National Guard, Marine Corps and Royal Navy, he flew eight different helicoptersNfrom the wooden-bladed OH-13E, through the Chinook, SeaKnight and SeaKing, in war and peace around the world. During that time over 50 of his friends died in crashes, both in combat and in accidents, but somehow his skill, and not an inconsiderable amount of luck and superstition, saw him through. His flying career began with a misbegotten strategy for beating the draft by enlisting. With the Vietnam War raging full blast in 1968 the draft was inevitable, so he wanted to at least get some small measure of control of his future. Although he had no thought of flying when he walked into the recruiting office, he walked out signed up to be a helicopter pilot. What he did not know was that 43% of all the aircraft sent to Vietnam were destroyed in combat or accidents. Soon he was in the thick of the war, flying Chinooks with the 101st Airborne. After Vietnam he left the Army, but kept flying in the National Guard while going to college. He was accepted at two law schools, but flying is addictive, so he instead enlisted in the USMC to fly some more. Over the next 17 years he would fly around the world off US and British ships from Egypt to Norway and all points in between. His engaging story will be a delight to all aviation enthusiasts.
