Algorithms of Oppression-Safiya Umoja Noble 2018-02-20 A revealing look at how negative biases against women of color are embedded in search engine results and algorithms Run a Google search for "black girls"—what will you find? "Big Booty" and other sexually explicit terms are likely to come up as top search terms. But, if you type in "white girls," the results are radically different. The suggested porn sites and un-moderated discussions about "why black women are so sassy" or "why black women are so angry" presents a disturbing portrait of black womanhood in modern society. In Algorithms of Oppression, Safiya Umoja Noble challenges the idea that search engines like Google offer an equal playing field for all forms of ideas, identities, and activities. Data discrimination is a real social problem; Noble argues that the combination of private interests in promoting certain sites, along with the monopoly status of a relatively small number of Internet search engines, leads to a biased set of search algorithms that privilege whiteness and discriminate against people of color, specifically women of color. Through an analysis of textual and media searches as well as extensive research on paid online advertising, Noble exposes a culture of racism and sexism in the way discoverability is created online. As search engines and their related companies grow in importance—operating as a source for email, a major vehicle for primary and secondary school learning, and beyond—understanding and reversing these disquieting trends and discriminatory practices is of utmost importance. An original, surprising and, at times, disturbing account of bias on the internet, Algorithms of Oppression contributes to our understanding of how racism is created, maintained, and disseminated in the 21st century.

Cfpcb Supervision and Examination Manual-Consumer Financial Protection Bureau 2015-01-19 Part 2 of 2 Today we are releasing Version 2 of the CFPB Supervision and Examination Manual, the guide our examiners use in overseeing companies that provide consumer financial products and services. Our manual, originally released in October 2011, describes how the CFPB supervises and examines these providers and gives our examiners direction on how to determine if companies are complying with consumer financial protection laws. We updated the supervision manual to reflect the renumbering of the consumer financial protection regulations for which the CFPB is responsible. The numbering conventions in the Code of Federal Regulations (CFR) allow the reader to easily identify which regulations fall under a particular agency's responsibility. The renumbering incorporated throughout the manual reflects the Dodd-Frank Act of 2010 transfer of rulemaking responsibility for many consumer financial protection regulations from other Federal agencies to the CFPB. In December 2011, the CFPB published its renumbered regulations in the Federal Register. The renumbered regulations also included certain technical changes but no substantive changes. The CFPB's renumbering reflects the codification of its regulations in Title 12 (Banks and Banking), Chapter X (Bureau of Consumer Financial Protection) of the CFR. For example, before July 21, 2011, the Federal Reserve had rulemaking authority for the Home Mortgage Disclosure Act, which was codified in Title 12, Chapter II (Federal Reserve System), Part 203. The CFPB's implementing regulation for the Home Mortgage Disclosure Act is now codified in Title 12, Chapter X, Part 1003.

German Television-Larson Powell 2016-08-01 Long overlooked by scholars and critics, the history and aesthetics of German television have only recently begun

to attract serious, sustained attention, and then largely within Germany. This ambitious volume, the first in English on the subject, provides a much-needed corrective in the form of penetrating essays on the distinctive theories, practices, and social-historical contexts that have defined television in Germany. Encompassing developments from the dawn of the medium through the Cold War and post-reunification, this is an essential introduction to a rich and varied media tradition.

NEW YORK TIMES NOTABLE BOOK OF 2017 \* A USA TODAY TOP TEN OF 2017 \* JULY PICK FOR THE PBS NEWSHOUR-NEW YORK TIMES BOOK CLUB NOW READ THIS \* FINALIST FOR THE 2018 DAYTON LITERARY PEACE PRIZE\* WINNER OF THE MEDICI BOOK CLUB PRIZE Roxane Gay's Favorite Book of 2017, Washington Post NEW YORK TIMES BESTSELLER \* #1 BOSTON GLOBE BESTSELLER \* USA TODAY BESTSELLER \* WALL STREET JOURNAL BESTSELLER \* WASHINGTON POST BESTSELLER "There could only be a few winners, and a lot of losers. And yet we played on, because we had hope that we might be the lucky ones." In the early 1900s, teenaged Sunja, the adored daughter of a crippled fisherman, falls for a wealthy stranger at the seashore near her home in Korea. He promises her the world, but when she discovers she is pregnant--and that her lover is married--she refuses to be bought. Instead, she accepts an offer of marriage from a gentle, sickly minister passing through on his way to Japan. But her decision to abandon her home, and to reject her son's powerful father, sets off a dramatic saga that will echo down through the generations. Richly told and profoundly moving, Pachinko is a story of love, sacrifice, ambition, and loyalty. From bustling street markets to the halls of Japan's finest universities to the pachinko parlors of the criminal underworld, Lee's complex and passionate characters--strong, stubborn women, devoted sisters and sons, fathers shaken by moral crisis--survive and thrive against the indifferent arc of history. \*Includes reading group guide\*

High-Dimensional Probability-Roman Vershynin 2018-09-30 High-dimensional probability offers insight into the behavior of random vectors, random matrices, random subspaces, and objects used to quantify uncertainty in high dimensions. Drawing on ideas from probability, analysis, and geometry, it lends itself to applications in mathematics, statistics, theoretical computer science, signal processing, optimization, and more. It is the first to integrate theory, key tools, and modern applications of high-dimensional probability. Concentration inequalities form the core, and it covers both classical results such as Hoeffding's and Chernoff's inequalities and modern developments such as the matrix Bernstein's inequality. It then introduces the powerful methods based on stochastic processes, including such tools as Slepian's, Sudakov's, and Dudley's inequalities, as well as generic chaining and bounds based on VC dimension. A broad range of illustrations is embedded throughout, including classical and modern results for covariance estimation, clustering, networks, semidefinite programming, coding, dimension reduction, matrix completion, machine learning, compressed sensing, and sparse regression.

Also covered: income tax withholding, calculating estimated taxes, making tax payments, preparing returns and making elections. The treatise is filled with hypothetical examples where our authors show you how to perform difficult tax calculations and how to apply tax rules and principles in everyday practice. The authors have also included scores of tax planning tips, commentaries and observations on the law, and caveats for the cautious practitioner. The Case against Education-Bryan Caplan 2019-08-20 Why we need to stop wasting public funds on education Despite being immensely popular—and immensely lucrative—education is grossly overrated. Now with a new afterword by Bryan Caplan, this explosive book argues that the primary function of education is not to enhance students' skills but to signal the qualities of a good employee. Learn why students hunt for easy As only to forget most of what they learn after the final exam, why decades of growing access to education have not resulted in better jobs for average workers, how employers reward workers for costly schooling they rarely ever use, and why cutting education spending is the best remedy. Romantic notions about education being "good for the soul" must yield to careful research and common sense—The Case against Education points the way.

Pain Management in Special Circumstances-Nabil Shallik 2018-11-21 Like management of disease, management of pain is as old as the human race. When patients come to us with their pain, they present us with a wonderful opportunity: the chance to understand them, to understand how their pain is affecting their lives, the challenge of discovering what is causing their pain, and finally the opportunity to prescribe medications and lifestyle changes to help them gain relief from their pain. It is hoped that this book will provide the latest evidence-based updates on pain management in special circumstances and will serve as a ready reference for those embarking on pain management. Its intent is not to be a heavy book that can only be stored on a bookshelf, but a pocket-sized reference that can be carried, be easily navigated, and be available whenever a conceptual gap compromises pain physicians and their ability to treat their patients.

Cognitive Load Theory-John Sweller 2011-04-07 Over the last 25 years, cognitive load theory has become one of the world's leading theories of instructional design. It is heavily researched by many educational and psychological researchers and is familiar to most practicing instructional designers, especially designers using computer and related technologies. The theory can be divided into two aspects that closely inter-relate and influence each other: human cognitive architecture and the instructional designs and prescriptions that flow from that architecture. The cognitive architecture is based on biological evolution. The resulting description of human cognitive architecture is novel and accordingly, the instructional designs that flow from the architecture also are novel. All instructional procedures are routinely tested using randomized, controlled experiments. Roughly 1/3 of the book will be devoted to cognitive architecture and its evolutionary base with 2/3 devoted to the instructional implications that follow, including technology-based instruction. Researchers, teachers and instructional designers need the book because of the explosion of interest in cognitive load theory over the last few years. The theory is represented in countless journal articles but a detailed, modern overview presenting the theory and its implications in one location is not available.

Assessing the Reliability of Computer-Processed Data-Nancy Kingsbury 2011-04 Computer-processed data (CPD) from outside sources are often central to audit reports. Because assessing CPD requires more technical tests, it may seem that such data are subject to a higher standard of testing than other evidence. This is not the case. For ex., we apply the same tests of sufficiency and appropriateness that we apply to other types of evidence, but in assessing CPD, we focus on one test in the evidence standard -- appropriateness -- which includes validity and reliability, which in turn includes the completeness and accuracy of the data. This guide provides a flexible, risk-based framework for data reliability assessments that can be geared to the circumstances of each audit. Illus. This is a print on demand edition of an important, hard-to-find report.

Post-Truth-Lee McIntyre 2018-02-16 How we arrived in a post-truth era, when "alternative facts" replace actual facts, and feelings have more weight than evidence. Are we living in a post-truth world, where "alternative facts" replace actual facts and feelings have more weight than evidence? How did we get here? In this volume in the MIT Press Essential Knowledge series, Lee McIntyre traces the development of the post-truth phenomenon from science denial through the rise of "fake news," from our psychological blind spots to the public's retreat into "information silos." What, exactly, is post-truth? Is it wishful thinking, political spin, mass delusion, bold-faced lying? McIntyre analyzes recent examples—claims about inauguration crowd size, crime statistics, and the popular vote—and finds that post-truth is an assertion of ideological supremacy by which its practitioners try to compel someone to believe something regardless of the evidence. Yet post-truth didn't begin with the 2016 election; the denial of scientific facts about smoking, evolution, vaccines, and climate change offers a road map for more widespread fact denial. Add to this the wired-in cognitive biases that make us feel that our conclusions are based on good reasoning even when they are not, the decline of traditional media and the rise of social media, and the emergence of fake news as a political tool, and we have the ideal conditions for post-truth. McIntyre also argues provocatively that the right wing borrowed from postmodernism—specifically, the idea that there is no such thing as objective truth—in its attacks on science and facts. McIntyre argues that we can fight post-truth, and that the first step in fighting post-truth is to understand it.
