"The New Guitarscape in Critical Theory, Cultural Practice and Musical Performance "-Kevin Dawe 2017-07-05 In The New Guitarscape, Kevin Dawe argues for a re-assessment of guitar studies in the light of more recent musical, social, cultural and technological developments that have taken place around the instrument. The author considers that a detailed study of the guitar in both contemporary and cross-cultural perspectives is now absolutely essential and that such a study must also include discussion of a wide range of theoretical issues, literature, musical cultures and technologies as they come to bear upon the instrument. Dawe presents a synthesis of previous work on the guitar, but also expands the terms by which the guitar might be studied. Moreover, in order to understand the properties and potential of the guitar as an agent of music, culture and society, the author draws from studies in science and technology, design theory, material culture, cognition, sensual culture, gender and sexuality, power and agency, ethnography (real and virtual) and globalization. Dawe presents the guitar as an instrument of scientific investigation and part of the technology of globalization, created and disseminated through corporate culture and cottage industry, held close to the body but taken away from the body in cyberspace, and involved in an enormous variety of cultural interactions and political exchanges in many different contexts around the world. In an effort to understand the significance and meaning of the guitar in the lives of those who may be seen to be closest to it, as well as providing a critically-informed discussion of various approaches to guitar performance, technologies and techniques, the book includes discussion of the work of a wide range of guitarists, including Robert Fripp, Kamala Shankar, Newton Faulkner, Lionel Loueke, Sharon Isbin, Steve Vai, Bob Brozman, Kaki King, Fred Frith, John 5, Jennifer Batten, Guthrie Govan, Dominic Frasca, I Wayan Balawan, Vicki Genfan and Hasan Cihat ?ter.

Currency Companion to Music and Dance in Australia-John Whiteoak 2003 This book is unique in its comprehensiveness and its recognition of cultural diversity and community. In Dr Whiteoak's words: "Instead of taking a 'Who's Who' approach it will emphasise the what, when and how of music and dance in Australia as a more effective way of revealing the breadth, complexity and rich variegation of these related performance cultures. In creating a contents list that expresses this breadth and diversity, we considered the fact that all forms of music and dance activity in Australia have cultural significance or commonly appreciated meanings for one group or another." The book not only covers the history of concert music, opera and ballet in Australia; of music teaching, composition, instruments, venues, union activity; of Aboriginal music and dance and its appropriation, and all forms of popular and folk music and dance, but embraces the wide variety of immigrant influences from Europe, America and particularly the Pacific; sound art, computer music and electroacoustics; belly dance, debutante balls, subcultures, music videos -- and much more. Over 200 researchers contribute to each volume -- academics, practitioners and private researchers from all parts of Australia and beyond. The general editors are respected Melbourne musicologists. Dr Whiteoak's field is the history of popular music-making; and Dr Scott-Maxwell's doctoral thesis was in Asian and Pacific musical influences.

Introduction to Digital Filters-Julius O. Smith 2007 A digital filter can be pictured as a "black box" that accepts a sequence of numbers and emits a new sequence of numbers. In digital audio signal processing applications, such number sequences usually represent sounds. For example, digital filters are used to implement graphic equalizers and other digital audio effects. This book is a gentle introduction to digital filters, including mathematical theory, illustrative examples, some audio applications, and useful software starting points. The theory treatment begins at the high-school level, and covers fundamental concepts in linear systems theory and digital filter analysis. Various "small" digital filters are analyzed as examples, particularly those commonly used in audio applications. Matlab programming examples are emphasized for illustrating the use and development of digital filters in practice.
