Security Management for Healthcare-Bernard J. Scaglione 2019-03-04 The healthcare industry is changing daily. With the advent of the Affordable Care Act and now the changes being made by the current administration, the financial outlook for healthcare is uncertain. Along with natural disasters, new diseases, and ransomware new challenges have developed for the healthcare security professional. One of the top security issues effecting hospitals today is workplace violence. People don't usually act violently out of the blue. There are warning signs that can be missed or don't get reported or, if they are reported, they may not be properly assessed and acted upon. Healthcare facilities need to have policies and procedures that require reporting of threatening or unusual behaviors. Having preventive policies and procedures in place is the first step in mitigating violence and providing a safe and security hospital. Persons working in the healthcare security field need to have information and tools that will allow them to work effectively within the healthcare climate. This holds true for security as well. Security professionals need to understand their risks and work to effectively mitigate threats. The author describes training techniques that can be accomplished within a limited budget. He explains how to manage staff more efficiently in order to save money and implement strategic plans to help acquire resources within a restricted revenue environment. Processes to manage emergent events, provide risk assessments, evaluate technology and understand information technology. The future of healthcare is uncertain, but proactive prevention and effective resolution provide the resources necessary to meet the challenges of the current and future healthcare security environment.

Best Care at Lower Cost-Institute of Medicine 2013-06-10 America's health care system has become too complex and costly to continue business as usual. Best Care at Lower Cost explains that inefficiencies, an overwhelming amount of data, and other economic and quality barriers hinder progress in improving health and threaten the nation's economic stability and global competitiveness. According to this report, the knowledge and tools exist to put the health system on the right course to achieve continuous improvement and better quality care at a lower cost. The costs of the system's current inefficiency underscore the urgent need for a systemwide transformation. About 30 percent of health spending in 2009--roughly \$750 billion--was wasted on unnecessary services, excessive administrative costs, fraud, and other problems. Moreover, inefficiencies cause needless suffering. By one estimate, roughly 75,000 deaths might have been averted in 2005 if every state had delivered care at the quality level of the best performing state. This report states that the way health care providers currently train, practice, and learn new information cannot keep pace with the flood of research discoveries and technological advances. About 75 million Americans have more than one chronic condition, requiring coordination among multiple specialists and therapies, which can increase the potential for miscommunication, misdiagnosis, potentially conflicting interventions, and dangerous drug interactions. Best Care at Lower Cost emphasizes that a better use of data is a critical element of a continuously improving health system, such as mobile technologies and electronic health records that offer significant potential to capture and share health data better. In order for this to occur, the National Coordinator for Health Information Technology, IT developers, and standard-setting organizations should ensure that these systems are robust and interoperable. Clinicians and care organizations should fully adopt these technologies, and patients should be encouraged to use tools, such as personal health information portals, to actively engage in their care. This book is a call to action that will guide health care providers; administrators; caregivers; policy makers; health professionals; federal, state, and local government agencies; private and public health organizations; and educational institutions.

Sorry Works!-Doug Wojcieszak 2007 This book is, in part, adapted from speeches I have given to medical, insurance, and legal organizations across the United States and in Australia and Canada over the last two years. Liability exposure has been a major issue for healthcare and insurance professionals for a long time, and they are looking for new solutions to an old problem. More and more doctors, nurses, risk managers, hospital administrators, and insurance executives are turning to Sorry Works! for answers. I thought it was time to put Sorry Works! in a book that was concise and to the point. Along the way I met and had the pleasure of working with James Saxton and his team at the law firm of Stevens & Lee. It was fascinating to me how as lawyers and health law consultants they were spreading the same message. To make sure this message was well grounded in law and risk management principles, we collaborated, and this book is part of that partnership. This book adequately covers the topic of disclosure and apology but has intentionally been kept short so even the busiest professional could read it on a plane ride or over a weekend. Though Sorry Works! has its roots in medicine, it is my hope that this book finds a wider audience in corporations, the small business community, and other sectors of our society that are concerned about litigation. I also hope the book appears in college course syllabi so future doctors, lawyers, and business people can read, discuss, and debate it. Indeed, if Sorry Works! can work in medical malpractice (often thought to be one of the most contentious and expensive litigation arenas) imagine what it can do elsewhere! Moreover, though Sorry Works! is a process and program, it also a way oflife universal to all people. Indeed, Sorry Works! returns us to our parents' lessons about apology and fixing mistakes. People can actually live with mistakes, but they do not accept or tolerate cover-ups. Sorry Works! taps into this psyche and, in doing so, provides a simple yet devastatingly effective way to reduce litigation and associated expenses while improving outcomes and safety, which further decreases litigation exposure. The keys are honesty, candor, and a real commitment to fix problems when something goes wrong. All three elements must be present to prevent conflict, and Sorry Works! shows you how to do it.

Safer Healthcare-Charles Vincent 2016-01-13 The authors of this book set out a system of safety strategies and interventions for managing patient safety on a day-to-day basis and improving safety over the long term. These strategies are applicable at all levels of the healthcare system from the frontline to the regulation and governance of the system. There have been many advances in patient safety, but we now need a new and broader vision that encompasses care throughout the patient's journey. The authors argue that we need to see safety through the patient's eyes, to consider how safety is managed in different contexts and to develop a wider strategic and practical vision in which patient safety is recast as the management of risk over time. Most safety improvement strategies aim to improve reliability and move closer toward optimal care. However, healthcare will always be under pressure and we also require ways of managing safety when conditions are difficult. We need to make more use of strategies concerned with detecting, controlling, managing and responding to risk. Strategies for managing safety in highly standardised and controlled environments are necessarily different from those in which clinicians constantly have to adapt and respond to changing circumstances. This work is supported by the Health Foundation. The Health Foundation is an independent charity committed to bringing about better health and health care for people in the UK. The charity's aim is a healthier population in the UK, supported by high quality health care that can be equitably accessed. The Foundation carries out policy analysis and makes grants to front-line teams to try ideas in practice and supports research into what works to make people's lives healthier and improve the health care system, with a particular emphasis on how to make successful change happen. A key part of the work is to make links between the knowledge of those working to deliver health and health care with research evidence and analysis. The aspiration is to create a virtuous circle, using what works on the ground to inform effective policymaking and vice versa. Good health and health care are vital for a flourishing society. Through sharing what is known, collaboration and building people's skills and knowledge, the Foundation aims to make a difference and contribute to a healthier population.
