When somebody should go to the books stores, search launch by shop, shelf by shelf, it is truly problematic. This is why we give the book compilations in this website. It will utterly ease you to look guide **journal of nature conservation** as you such as.

By searching the title, publisher, or authors of guide you in point of fact want, you can discover them rapidly. In the house, workplace, or perhaps in your method can be all best place within net connections. If you goal to download and install the journal of nature conservation, it is extremely simple then, since currently we extend the colleague to purchase and create bargains to download and install journal of nature conservation correspondingly simple!

Perspectives on Nature Conservation-John Tiefenbacher 2012-02-29 Perspectives on Nature Conservation demonstrates the diversity of information and viewpoints that are critical for appreciating the gaps and weaknesses in local, regional and hemispheric ecologies, and also for understanding the limitations and barriers to accomplishing critical nature conservation projects. The book is organized to emphasize the linkages between the geographic foci of conservation projects and the biological substances that we conceptualize as "nature", through original research. The reader moves through perspectives of diminishing spatial scales, from smaller to larger landscapes or larger portions of the Earth, to learn that the range of factors that promote or prevent conservation through the application of scholarship and academic concepts change with the space in question. The book reflects disciplinary diversity and a co-mingling of science and social science to promote understanding of the patterns of, pressures on and prospects for conservation.

The Law of Nature Conservation-Christopher Rodgers 2013-03-21 Providing a detailed account of the law of nature conservation, this book reviews and discusses the way in which the law promotes the conservation of species of animal, bird, and plant, and how it protects natural habitats for protected species. Using an interdisciplinary approach, the book sets nature conservation in its economic and scientific context. It explains how the law reconciles the public interest in promoting biodiversity and the conservation of species and habitats, on the one hand, and the private property rights of landowners and other resource appropriators on the other. The book offers an illuminating new interpretation of this area of environmental regulation using a resource allocation model of property rights to explain how legal and economic instruments for promoting nature conservation work in practice. The analysis covers all recent legislation and case law - including the Marine and Coastal Access Act 2009, the Conservation of Habitats and Species Regulations 2010 and the 2012 National Planning Policy Framework. The book will serve as a critical guide to UK nature conservation law for those working in the system, and a valuable reference point on the UK's approach to the area for environmental lawyers and policy-makers overseas.

Nature Conservation-Dan Gafta 2007-02-15 This book provides a multi-disciplinary coverage of the broad fields of species, community and landscape conservation. The panel of contributors consider a range of topics in vegetation and biodiversity assessment, planning and management of conservation zones and protected areas, together with historical and social/legal issues of the environment and nature conservation. The book celebrates the life's work of Professor Franco Pedrotti.

Free-Ranging Dogs and Wildlife Conservation-Matthew E. Gompper 2013-10-17 Dogs are the world's most common and widespread carnivores and are nearly ubiquitous across the globe. The vast majority of these dogs, whether owned or un-owned, pure-bred or stray, spend a large portion of their life as unconfined, free-roaming animals, persisting at the interface of human and wildlife communities. Their numbers are particularly large throughout the developing world, where veterinary care and population control are often minimal and human populations are burgeoning. This volume brings together the world's experts to provide a comprehensive, unifying, and accessible review of the effects of dogs on native wildlife species. With an emphasis on addressing how free-ranging

dogs may influence wildlife management and native species of conservation concern, chapters address themes such as the global history and size of dog populations, dogs as predators, competitors, and prey of wildlife, the use of dogs as hunting companions, the role of dogs in maintaining diseases of wildlife, and the potential for dogs to hybridize with wild canid species. In addition, the potential role of dogs as mediators of conservation conflict is assessed, including the role of dogs as livestock guardians, the potential for dogs to aid researchers in locating rare wildlife species of conservation interest, and the importance of recognizing that some populations of dogs such as dingoes have a long history of genetic isolation and are themselves important conservation concerns. A common theme woven throughout this volume is the potential for dogs to mediate how humans interact with wildlife and the recognition that the success of wildlife conservation and management efforts are often underpinned by understanding and addressing the potential roles of free-ranging dogs in diverse natural ecosystems. *Free-Ranging Dogs and Wildlife Conservation* is aimed at professional wildlife and conservation ecologists, managers, graduate students, and researchers with an interest in human-dog-wildlife interactions. It will also be of relevance and use to dog welfare researchers, veterinary scientists, disease ecologists, and readers with an interest in the interface of domestic animals and wildlife.

*Urban Nature Conservation*-Stephen Forbes 2013-05-13 Urban nature conservation is a field that has grown rapidly in importance over the past 20 years and will continue to do so in the coming years as landscape ecology and greenspace planning become established disciplines. A widespread concern and interest in the wild plants and animal life found in urban areas now influences the policies and practices of land management organizations. This book provides a comprehensive overview of the subject. It will assist professionals in formulating strategic management policies that integrate urban nature conservation into the wider context of landscape management and urban planning.

*YOUMARES 9 - the Oceans: Our Research, Our Future*-Simon Jungblut 2020-01-01

*People, Plants, and Justice*-Charles Zerner 2000-07-18 In an era of market triumphalism, this book probes the social and environmental consequences of market-linked nature conservation schemes. Rather than supporting a new anti-market orthodoxy, Charles Zerner and colleagues assert that there is no universal entity, "the market." Analysis and remedies must be based on broader considerations of history, culture, and geography in order to establish meaningful and lasting changes in policy and practice. Original case studies from Asia, Latin America, Africa, and the South Pacific focus on topics as diverse as ecotourism, bioprospecting, oil extraction, cyanide fishing, timber extraction, and property rights. The cases position concerns about biodiversity conservation and resource management within social justice and legal perspectives, providing new insights for students, scholars, policy professionals and donor/foundations engaged in international conservation and social justice.

*Bird Conservation*-David R. Williams 2013-03-01 This book brings together scientific evidence and experience relevant to the practical conservation of wild birds. The authors worked with an international group of bird experts and conservationists to develop a global list of interventions that could benefit wild birds. For each intervention, the book summarises studies captured by the Conservation Evidence project, where that intervention has been tested and its effects on birds quantified. The result is a thorough guide to what is known, or not known, about the effectiveness of bird conservation actions throughout the world. The preparation of this synopsis was funded by the Natural Environment Research Council and Arcadia.

Nature Conservation in Southern Africa- 2018-11-15 Nature Conservation in Southern Africa. Morality and Marginality: Towards Sentient Conservation? proposes ways to study linkages between the marginality, subjectivity and agency of both human and animals, promoting a new approach to conservation referred to as 'sentient conservation'.

Digital Terrain Modelling-Robert Joseph Peckham 2007-10-12 This publication is the first book on the development and application of digital terrain modeling for regional planning and policy support. It is a compilation of research results by international research groups at the European Commission's Joint Research Centre, providing scientific support to the development and implementation of EU environmental policy. This practice-oriented book is recommended reading for practising environmental modelers and GIS experts working on regional planning and policy support applications.

Management Planning for Nature Conservation-Mike Alexander 2012-12-05 The first edition of Mike Alexander's Management Planning for Nature Conservation, brought a new dimension to the modern literature on conservation management. This second edition, a significant enhancement of the original, deals with the development both, conceptual and practical, of adaptive management planning for nature conservation. It is about preparing management plans, and guides the reader through the entire process. Case-studies, including a conservation and access plan, demonstrate the planning process in action. This approach to planning can be applied to any place which is managed entirely, or in part, for wildlife. It can be applied to the management of species or habitats in any circumstance, regardless of site designation. The process is fully compatible with the Convention on Biological Diversity's 'ecosystem approach' to conservation management. Mike Alexander has long been at the forefront of developing management planning for conservation, with experience ranging from Uganda to Estonia, and from Costa Rica to Wales. He is the General Secretary of the Conservation Management System Consortium, a group of organisations with a common aim of raising standards and developing best practice in conservation management and planning. In 2012 Mike Alexander was elected a Fellow of the Society of Biology in recognition of his contribution to nature conservation and in particular management planning. This book has drawn on the experiences and expertise of the CMS consortium and other leaders in both conservation research and wildlife management from around the world. It is essential reading for professional conservation managers and any student studying management planning for conservation within a range of degree and postgraduate courses.

Land Use, Nature Conservation and the Stability of Rainforest Margins in Southeast Asia-Gerhard Gerold 2013-06-29 Southeast Asia constitutes one of the world's most extended rainforest regions. It is characterized by a high degree of biodiversity and contains a large variety of endemic species. Moreover, these forests provide a number of important and singular ecosystem services, like erosion protection and provision of high quality water, which cannot be replaced by alternative ecosystems. However, various forms of encroachment, mostly those made by human interventions, seriously threaten the continuance of rainforests in this area. There is ample evidence that the rainforest resources, apart from large scale commercial logging, are exposed to danger particularly from its margin areas. These areas, which are characterized by intensive man-nature interaction, have been identified as extremely fragile systems. The dynamic equilibrium that balances human needs and interventions on the one hand, and natural regeneration capacity on the other, is at stake. The decrease of rainforest resources is, to a substantial degree, connected with the destabilization of these systems. Accordingly, the search for measures and processes, which prevent destabilization and promote stability is regarded as imperative. This refers to both the human and the natural part of the forest margin ecosystem.

*The Nature of Spectacle*-Jim Igoe 2017-09-12 Today crisis appears to be the normal order of things. We seem to be turning in widening gyres of economic failure, species extinction, resource scarcity, war, and climate change. These crises are interconnected ecologically, economically, and politically. Just as importantly, they are connected—and disconnected—in our imaginations. Public imaginations are possibly the most important stage on which crises are played out, for these views determine how the problems are perceived and what solutions are offered. In *The Nature of Spectacle*, Jim Igoe embarks on multifaceted explorations of how we imagine nature and how nature shapes our imaginations. The book traces spectacular productions of imagined nature across time and space—from African nature tourism to transnational policy events to green consumer appeals in which the push of a virtual button appears to initiate a chain of events resulting in the protection of polar bears in the Arctic or jaguars in the Amazon rainforest. These explorations illuminate the often surprising intersections of consumerism, entertainment, and environmental policy. They show how these intersections figure in a strengthening and problematic policy consensus in which economic growth and ecosystem health are cast as mutually necessitating conditions. They also take seriously the potential of these intersections and how they may facilitate other alignments and imaginings that may become the basis of alternatives to our current socioecological predicaments.

*Publication Manual of the American Psychological Association, 6th Edition*-American Psychological Association 2015-07-26 The "Publication Manual" is the style manual of choice for writers, editors, students, and educators. Although it is specifically designed to help writers in the behavioral sciences and social sciences, anyone who writes non-fiction prose can benefit from its guidance. The newly-revised Sixth Edition has not only been rewritten. It has also been thoroughly rethought and reorganized, making it the most user-friendly "Publication Manual" the APA has ever produced. You will be able to find answers to your questions faster than ever before. When you need advice on how to present information, including text, data, and graphics, for publication in any type of format

*People in Nature*-Kirsten M. Silvius 2004-12-14 This book reviews wildlife management and conservation in Central and South America. The book discusses the threats to biodiversity in this area including habitat fragmentation, development, ranching, tourism as well as hunting. The book contains contributions from many local Latin American authors who work there daily and are exposed to the numerous and unique issues that need to be taken into account when talking about conservation in Central and South America.

*Mapping Disease Transmission Risk*-A. Townsend Peterson 2014-11-26 A. Townsend Peterson, one of the pioneers of ecological niche modeling, presents a synthesis that illuminates new and more effective infectious disease mapping methods. His work is "the culmination of twelve years of refinement" breaks new ground by integrating biogeographic and ecological factors with spatial models. Aimed at seasoned epidemiologists and public health experts, this interdisciplinary book explains the conceptual and technical underpinnings of Peterson's approach while simultaneously describing the potentially enormous benefits of his modeling method. Peterson treats disease transmission areas for what they are—"distributions of species. The book argues that complex, fragmented, and highly irregular disease patterns can only be understood when underlying environmental drivers are considered. The result is an elegant modeling approach that challenges static spatial models and provides a framework for recasting disease mapping. Anyone working in the area of disease transmission, particularly those employing predictive maps, will find Peterson's book both inspiring and indispensable.

*Conservation Psychology*-Susan Clayton 2011-09-19 This textbook introduces the reader to the new and emerging field of Conservation Psychology, which explores connections between the study of human behavior and the achievement of conservation goals. People are often cast as villains in the story of environmental degradation, seen primarily as a threat to healthy ecosystems and an obstacle to conservation. But humans are inseparable from natural ecosystems. Understanding how people think about, experience, and interact with nature is crucial for promoting environmental sustainability as well as human

well-being. The book first summarizes theory and research on human cognitive, emotional, and behavioral responses to nature and goes on to review research on people's experience of nature in wild, managed, and urban settings. Finally, it examines ways to encourage conservation-oriented behavior at both individual and societal levels. Throughout, the authors integrate a wide body of published literature to demonstrate how and why psychology is relevant to promoting a more sustainable relationship between humans and nature.

21st Century Economics: A Reference Handbook-Rhona C. Free 2010-05-14 Interest in economics is at an all-time high. Among the challenges facing the nation is an economy with rapidly rising unemployment, failures of major businesses and industries, and continued dependence on oil with its wildly fluctuating price. Americans are debating the proper role of the government in company bailouts, the effectiveness of tax cuts versus increased government spending to stimulate the economy, and potential effects of deflation. Economists have dealt with such questions for generations, but they have taken on new meaning and significance. Tackling these questions and encompassing analysis of traditional economic theory and topics as well as those that economists have only more recently addressed, 21st Century Economics: A Reference Handbook is intended to meet the needs of several types of readers. Undergraduate students preparing for exams will find summaries of theory and models in key areas of micro and macroeconomics. Readers interested in learning about economic analysis of an issue as well students embarking on research projects will find introductions to relevant theory and empirical evidence. And economists seeking to learn about extensions of analysis into new areas or about new approaches will benefit from chapters that introduce cutting-edge topics. To make the book accessible to undergraduate students, models have been presented only in graphical format (minimal calculus) and empirical evidence has been summarized in ways that do not require much background in statistics or econometrics. It is thereby hoped that chapters will provide both crucial information and inspiration in a non-threatening, highly readable format.

The Nature of Conservation-Philip Ward 1990-07-05 This classic work explains the place of conservation and restoration in museums. Topics include conservation and restoration, the role of science in conservation, and the ethical dilemmas conservators must face. Long out of print, this publication is now being published online by the Getty Conservation Institute.

Land, Water and Development-Malcolm Newson 2002-09-11 This is a fully revised and expanded second edition of Malcolm Newson's acclaimed book. Exploring in greater depth the meaning of sustainability in river basin development this new edition: \* highlights the rapid evolution of practical concepts since the Rio Earth Summit \* features new illustrations and case studies from Australia, South Africa and Israel \* makes the ecosystem model more explicit throughout \* strengthens coverage of the linkages between land and water management.

Enterprising Nature-Jessica Dempsey 2016-08-29 Enterprising Nature explores the rise of economic rationality in global biodiversity law, policy and science. To view Jessica's animation based on the book's themes please visit <http://www.bioeconomies.org/enterprising-nature/> Examines disciplinary apparatuses, ecological-economic methodologies, computer models, business alliances, and regulatory conditions creating the conditions in which nature can be produced as enterprising Relates lively, firsthand accounts of global processes at work drawn from multi-site research in Nairobi, Kenya; London, ENGL and Nagoya, Japan Assesses the scientific, technical, geopolitical, economic, and ethical challenges found in attempts to 'enterprise nature' Investigates the implications of this 'will to enterprise' for environmental politics and policy

Forages and grazing in horse nutrition-Markku Saastamoinen 2012-08-17 Forages should be the basis of all diets in horse feeding. Therefore it is of major importance to determine which parameters will influence their quality. Changes on chemical composition along the vegetative cycle, nutrient losses during harvesting, preservation and storage are factors that could have an effect on nutritive value, as well on digestibility and palatability. A specific grazing and ingesting behaviour, linked to plant preferences and the selection of feeding sites will have an impact on biodiversity. This will determine the options on plant species and varieties and further management of pastures for horses. This book highlights the role of forages and grazing in horse nutrition and also gathers information about related topics, such as the contribution of local breeds for the sustainability and development of rural areas, their impact on landscape and relationships with environmental preservation. This book is the 6th volume in a scientific series conceived through the European Workshop on Equine Nutrition (EWEN) which falls under the umbrella of the Horse Commission of the European Federation of Animal Science (EAAP). All these materials provide an interesting basis for further discussion, not only in specialized forums, but also for those involved in horse production.

Conservation of Wildlife Populations-L. Scott Mills 2012-12-17 This is an introduction to the concepts and principles for solving management problems in wildlife and conservation biology. The book shows how population biology addresses questions involving the harvest, monitoring, and conservation of wildlife populations.

The South African Journal of Environmental Law and Policy- 1994

Grazing and Conservation Management-Michiel F. WallisDeVries 1998 Grazing animals enjoy an ambiguous reputation in the field of nature conservation. Livestock are often treated as a scourge, yet native large herbivores form the prime attraction of many a reserve. This book gives the first comprehensive overview of the use of grazing as a tool in conservation management. Considering in turn the ecological and historical background, the impact of grazing on community structure, management applications and future prospects, this book examines issues such as the role of herbivores as keystone species, the assessment of habitat quality and the function of scientific models in advancing grazing management. Large herbivores are shown to be potentially powerful allies in the management of nature reserves, particularly in the maintenance, enhancement or restoration of biodiversity. Grazing and Conservation Management will appeal to conservation biologists and rangeland managers, providing them with a clearer understanding of grazing and conservation management.

Leaving Space for Nature-Nigel Dudley 2020-04-29 This book provides the first contemporary assessment of area-based conservation and its implications for nature and society. Now covering 15 per cent of the land surface and a growing area of ocean, the creation of protected areas is one of the fastest conscious changes in land management in history. But this has come at a cost, including a backlash from human rights organisations about the social impacts of protected areas. At the same time, a range of new types of area-based conservation has emerged, based on indigenous people's territories, local community lands and a new designation of "other effective area-based conservation measures". This book provides a concise overview of the status and possible futures of area-based conservation. With many people calling for half the earth's land surface to remain in a natural condition, this book taps into the urgent debate about the feasibility of such an aim and the ways in which such land might be managed. It provides a timely contribution by people who have been at the centre of the debate for the last twenty years. Building on the authors' large personal knowledge, the book draws on global case studies where the authors have firsthand experience, including Yosemite National Park (USA), Blue Mountains National Park (Australia), Bwindi National Park (Uganda), Chingaza National Park (Colombia), Ustyart Plateau (Kazakhstan), Snowdonia National Park (Wales) and many more. This book is essential reading for students, academics and practitioners interested in conservation and its impact on society.

Mires and Peatlands in Europe-Hans Joosten 2017-04-28 The European continent features an impressive variety of mires and peatlands. Polygon, palsa, and aapa mires, concentric and eccentric bogs, spring and percolation fens, coastal marshes, blanket bogs, saline fens, acid, alkaline, nutrient poor, nutrient rich: the peatlands of Europe represent unique ecosystem biodiversity and harbour a large treasure of flora and fauna typical of peat forming environments. Europe is also the continent with the longest history, the highest intensity, and the largest variety of peatland use, and as a consequence it has the highest proportion of degraded peatlands worldwide. Peatland science and technology developed in parallel to exploitation and it is therefore not surprising that almost all modern peatland terms and concepts originated and matured in Europe. Their massive degradation also kindled the desire to protect these beautiful landscapes, full of peculiar wildlife. In recent decades attention has widened to include additional vital ecosystem services that natural and restored peatlands provide. Already the first scientific book on peatlands (Schoockius 1658) contained a chapter on restoration. Yet, only now there is a rising awareness of the necessity to conserve and restore mires and peatlands in order to avoid adverse environmental and economic effects. This book provides - for the first time in history - a comprehensive and up-to-date overview of mires and peatlands in biogeographic Europe. Written by 134 authors, the book describes mire and peatland types, terms, extent, distribution, use, conservation, and restoration individually for each country and integrated for the entire continent. Complemented by a multitude of maps and photographs, the book offers an impressive and colourful journey, full of surprising historical context and fascinating details, while appreciating the core principles and unifying concepts of mire science.

The Human Impact on the Natural Environment-Andrew S. Goudie 2013-04-02 The seventh edition of this classic student text explores the multitude of impacts that humans have had over time upon vegetation, animals, soils, water, landforms and the atmosphere. It also looks into the future and considers the ways in

which climate changes and modifications in land cover may change the environment in coming decades. Extensively re-written, it contains many new statistical tables, figures, and references. It is essential reading for undergraduates in geography and environmental science, and for those who want a thorough, wide-ranging and balanced overview of the impacts of humans upon natural processes and systems from the Stone Age to the Anthropocene and who wish to understand the major environmental issues that concern the human race at the present time. Additional resources for this book can be found at: [www.wiley.com/go/goudiehumanimpact](http://www.wiley.com/go/goudiehumanimpact).

Crimes Against Nature-Karl Jacoby 2014-02-22 Crimes against Nature reveals the hidden history behind three of the nation's first parklands: the Adirondacks, Yellowstone, and the Grand Canyon. Focusing on conservation's impact on local inhabitants, Karl Jacoby traces the effect of criminalizing such traditional practices as hunting, fishing, foraging, and timber cutting in the newly created parks. Jacoby reassesses the nature of these "crimes" and provides a rich portrait of rural people and their relationship with the natural world in the late nineteenth and early twentieth centuries.

Nature Inc.-Bram Bÿscher 2014-05-29 With global wildlife populations and biodiversity riches in peril, it is obvious that innovative methods of addressing our planet's environmental problems are needed. But is "the market" the answer? Nature™ Inc. brings together cutting-edge research by respected scholars from around the world to analyze how "neoliberal conservation" is reshaping human-nature relations.

Artificial Intelligence and Conservation-Fei Fang 2019-03-28 With the increasing public interest in artificial intelligence (AI), there is also increasing interest in learning about the benefits that AI can deliver to society. This book focuses on research advances in AI that benefit the conservation of wildlife, forests, coral reefs, rivers, and other natural resources. It presents how the joint efforts of researchers in computer science, ecology, economics, and psychology help address the goals of the United Nations' 2030 Agenda for Sustainable Development. Written at a level accessible to conservation professionals and AI researchers, the book offers both an overview of the field and an in-depth view of how AI is being used to understand patterns in wildlife poaching and enhance patrol efforts in response, covering research advances, field tests and real-world deployments. The book also features efforts in other major conservation directions, including protecting natural resources, ecosystem monitoring, and bio-invasion management through the use of game theory, machine learning, and optimization.
