Transforming Global Information and Communication Markets-Peter F. Cowhey 2012-01-13 Innovation in information and communication technology (ICT) fuels the growth of the global economy. How ICT markets evolve depends on politics and policy, and since the 1950s periodic overhauls of ICT policy have transformed competition and innovation. For example, in the 1980s and the 1990s a revolution in communication policy (the introduction of sweeping competition) also transformed the information market. Today, the diffusion of Internet, wireless, and broadband technology, growing modularity in the design of technologies, distributed computing infrastructures, and rapidly changing business models signal another shift. This pathbreaking examination of ICT from a political economy perspective argues that continued rapid innovation and economic growth require new approaches in global governance that will reconcile diverse interests and enable competition to flourish. The authors (two of whom were architects of international ICT policy reforms in the 1990s) discuss this crucial turning point in both theoretical and practical terms.

Minimalism-Hartmut Obendorf 2009-06-12 The notion of Minimalism is proposed as a theoretical tool supporting a more differentiated understanding of reduction and thus forms a standpoint that allows definition of aspects of simplicity. Possible uses of the notion of minimalism in the field of human–computer interaction design are examined both from a theoretical and empirical viewpoint, giving a range of results. Minimalism defines a radical and potentially useful perspective for design analysis. The empirical examples show that it has also proven to be a useful tool for generating and modifying concrete design techniques. Divided into four parts this book traces the development of minimalism, defines the four types of minimalism in interaction design, looks at how to apply it and finishes with some conclusions.

Critical Information Infrastructures Security-CRITIS 2006-12-14 Key sectors of modern economies depend highly on ICT. The information flowing through the resulting technological super-infrastructure as well as the information being processed by the complex computing systems that underpin it becomes crucial because its disruption, disturbance or loss can lead to high financial, material and, sometimes, human loss. As a consequence, the security and dependability of this infrastructure become critical and its

protection a major objective for governments, companies and the research community. CRITIS has been born as an event that aims to bring together researchers and professionals from universities, private companies and public administrations interested or involved in all security-related heterogeneous aspects of critical information infrastructures. This volume contains the proceedings of the 1st International Workshop on Critical Information Infrastructure Security (CRITIS 2006), that was held between August 31 and September 1, 2006 on Samos, Greece, and was hosted by the University of the Aegean, Department of Information and Communication Systems Engineering, Laboratory of Information and Communication Systems Security (Info-Sec-Lab). In response to the CRITIS 2006 call for papers, 57 papers were submitted. Each paper was reviewed by three members of the Program Committee, on the basis of significance, novelty, technical quality and relevance to critical infrastructures. At the end of the reviewing process, only 22 papers were selected for presentation, resulting in an acceptance rate of 38%. Revisions were not checked and the authors bear full responsibility for the content of their papers.

The Cycle of Leadership-Noel M. Tichy 2009-03-17 In The Leadership Engine, Noel Tichy showed how great companies strive to create leaders at all levels of the organization, and how those leaders actively develop future generations of leaders. In this new book, he takes the theme further, showing how great companies and their leaders develop their business knowledge into ⬜achable points of view,♀pend a great portion of their time giving their learnings to others, sharing best practices, and how they in turn learn and receive business ideas/knowledge from the employees they are teaching. Calling this exchange a virtuous teaching cycle, Professor Tichy shows how business builders from Jack Welch at GE to Joe Liemandt at Trilogy create organizations that foster this knowledge exchange and how their efforts result in smarter, more agile companies, and winning results. Some of these ideas were showcased in Tichy′s recent Harvard Business Review article entitled, ⬜ Ordinary Boot Camp." Using examples from GE, Ford, Dell, Southwest Airlines and many others, Tichy presents and analyzes these principles in action and shows how managers can begin to transform their own businesses into teaching organizations and, consequently, better-performing companies

British Forces Motorcycles, 1925-45-Chris J. Orchard 2006 Perhaps the most far reaching of the many changes wrought on the military by the First World War was the mechanization of the armed services. After many centuries of use by the Army for patrols and communications, the trusty horse was finally supplanted by the new-fangled motorcycle. This mechanization process gathered pace during the interwar years and in particular for the military motorcycle between 1925 and 1939. By the outbreak of the Second World War the motorcycle had become an important part of the military inventory and deemed 'suitable for WD (War Department) requirements'. When it was first published in 1995, this fully illustrated book was unique in looking at all military motorcycles of British origin known to have been tested mainly by the Mechanical Warfare Experimental Establishment (later called the Mechanisation Experimental Establishment). Ten years on, the authors are producing a fully revised and updated new edition of their book that will include three new chapters covering standard parts, bike markings and paint schemes. There will also be a picture spread that illustrates despatch rider's clothing. New to this edition will be a 16pp colour section that will illustrate restored WD bikes, including detail shots of engines and components.

Trace Elements in Obstetrics and Gynecology-Naira Roland Matevosyan, Dr 2013-02-10 A trace element (TE) is a chemical element presented below ~0.1 wt. % and required in minute quantities to maintain proper physical functioning. TE analysis in clinical samples (plasma, urine, cerebro-spinal fluid, full-term placenta, hair, nails, buccal mucosa, semen, biopsy specimens) has received increasing attention. Based on 62 sources, current effort presents comparative knowledge about the attempts to accurately trace TE in clinical samples through Vis/NIR, PIXE, TXRF, GFAAS, ICP-MS. It informs the need for further research adjustments to reveal the reciprocal states of certain TE (Cu/Zn, Ca/Mg, Fe/ Pb) in correlation with their real-time counts in both maternal and neonatal umbilical cord plasma, and in relation to augmented oxidative stress. This would help to achieve consistency in interpreting obstetrical complications (preeclampsia, prematurity, or gestational diabetes). Generated hypotheses should target plausible mechanisms behind TE alterations and their stage-sensitive measures in gynecological cancer. New prospects are discussed in management and prognosis of endometriosis and premature ovarian failure (POF).

Braxton Bragg-Earl J. Hess 2016-09-02 As a leading Confederate general, Braxton Bragg (1817–1876) earned a reputation for incompetence, for wantonly shooting his own soldiers, and for losing battles. This public image established him not only as a scapegoat for the South's military failures but also as the chief whipping boy of the Confederacy. The strongly negative opinions of Bragg's contemporaries have continued to color assessments of the general's military career and character by generations of historians. Rather than take these assessments at face value, Earl J. Hess's biography offers a much more balanced account of Bragg, the man and the officer. While Hess analyzes Bragg's many campaigns and battles, he also emphasizes how his contemporaries viewed his successes and failures and how these reactions affected Bragg both personally and professionally. The testimony and opinions of other members of the Confederate army--including Bragg's superiors, his fellow generals, and his subordinates--reveal how the general became a symbol for the larger military failures that undid the Confederacy. By connecting the general's personal life to his military career, Hess positions Bragg as a figure saddled with unwarranted infamy and humanizes him as a flawed yet misunderstood figure in Civil War history.

Facebook-Steven Levy 2020-02-25 He has had unprecedented access to Mark Zuckerberg and Sheryl Sandberg for three years. And now renowned tech writer Steven Levy delivers the definitive history of one of America's most powerful and controversial companies: Facebook. In his sophomore year of college, Mark Zuckerberg created a simple website to serve as a campus social network. The site caught on like wildfire, and soon students nationwide were on Facebook. Today, Facebook is nearly unrecognizable from Zuckerberg's first, modest iteration. It has grown into a tech giant, the largest social media platform and one of the most gargantuan companies in the world, with a valuation of more than $576 billion and almost 3 billion users, including those on its fully owned subsidiaries, Instagram and WhatsApp. There is no denying the power and omnipresence of Facebook in American daily life. And in light of recent controversies surrounding election-influencing "fake news" accounts, the handling of its users' personal data, and growing discontent with the actions of its founder and CEO, never has the company been more central to the national conversation. Based on hundreds of interviews inside and outside the company, Levy's sweeping narrative digs deep into the whole story of the company that has changed the world and reaped the consequences.

Faces of America-Henry Louis Gates Jr. 2010-09-01 As a nation of immigrants, the American experience is vibrantly defined by the diverse racial, ethnic, cultural, and religious heritage of its people. Perhaps because so many of their ancestors migrated to this country relatively recently, Americans are especially concerned with their family trees, carving out personal histories by combing through documents such as wills and estate records, federal and state censuses, and private family papers, and mining the stories and tales handed down to them by their forebears. Since 2007, the Harvard scholar Henry Louis Gates, Jr., has been helping African Americans find long-buried details about their ancestors by researching their family trees and then, when the paper trail ends, by analyzing their DNA and marrying that information to a wealth of historical data. Now, in Faces of America Gates explores the family trees of twelve of America's most recognizable and extraordinary citizens, individuals who learn that they are of Asian, English, French, German, Irish, Italian, Jamaican, Jewish, Latino, Native American, Swiss, and Syrian ancestry: Inaugural poet Elizabeth Alexander, chef Mario Batali, comedian and television personality Stephen Colbert, writer Louise Erdrich, writer Malcolm Gladwell, actress Eva Longoria, cellist Yo Yo Ma, writer and director Mike Nichols, former monarch of Jordan Queen Noor, surgeon and author Dr. Mehmet Oz, actress Meryl Streep, and Olympic gold medalist and figure skater Kristi Yamaguchi. In addition, each of the subjects in Faces of America underwent dense genotyping to trace their genetic ancestry on their father's line, their mother's line, and their percentages of European, Asian, Native American, and African ancestry. Faces of America unfolds as a riveting journey into our country's complex ancestral past.

Readers will share in the surprise and delight, the shock and sadness of these twelve individuals themselves as Gates unveils their rich family stories, traced back to their arrival on America's shores, and beyond, deep into the history of their ancestors' countries of origin. America, as Gates shows us, is a nation of many historical threads, interwoven and united in the present moment. In this compelling book, Gates demonstrates that where we come from profoundly and fundamentally informs who we are today.

Using Pedagogic Intervention to Cultivate Contextual Lexical Competence in L2-GAIYAN. WANG 2019-10-10 This book challenges prevailing linguistic presumptions concerning contextual lexical meaning by determining whether pedagogic intervention targeted at raising Chinese EFL learners' awareness of the pragmatic nature of contextual lexical meaning can enhance the learners' contextual lexical inferencing competence (CLIC). CLIC is crucial to the development of their vocabulary, reading ability and autonomy in reading. Through an empirical study conducted among a group of adult Chinese students of English, the author shows that the power of CLIC instruction lies mainly in its effectiveness in enhancing learners' self-confidence in making lexical inferences. This book will be of interest to researchers and students of applied linguistics, TESOL and language education more generally, and for language professionals keen to extend their research experience. Wang Gaiyan is a professor at Xi'an International Studies University, China. She obtained her Ph.D. in applied linguistics from Guangdong University of Foreign Studies, Guangzhou, China. Her research interests lie mainly in second language acquisition and pedagogy, including second language vocabulary acquisition in reading process, the nature of lexical meaning, and second language vocabulary pedagogy. The focus of her research is on incidental vocabulary acquisition in reading contexts.
