Adolescents in the Internet Age-Paris S. Strom 2009-07-01 The tools of communication technology have transformed socialization and education of adolescents. They are the first generation to be growing up with the Internet, cell phones, iPods, computers, electronic hand helds and satellite television. Building friendships and social networks are common experiences online. Most teenagers prefer the Internet as the main source of learning. Because students know things that are unknown to teachers, their traditional relationship can shift to provide greater benefit for both parties if they pursue reciprocal learning. This book introduces a new set of core topics to reflect current conditions of the adolescent environment instead of life in yesterday’s world. The discussion shows how the Internet can be used to practice skills needed for learning and working in the future. Visual intelligence and media literacy are essential for critical thinking. Creative thinking should be encouraged in classrooms and become a more common outcome of schooling. Social maturity can improve when networking includes interaction with adults as well as peers. Prevention of cheating and cyber abuse presents unprecedented challenges. Understanding sexuality, nutrition, exercise, and stress contribute to a healthy lifestyle. Teamwork skills, peer evaluation, and exercises for cooperative learning groups are presented. Classroom applications address the practical concerns of teachers. The book is organized in four domains of identity, cognitive, social, and health expectations. Each chapter includes student polls to assess conditions of learning and websites that augment the book content. The target audience is prospective teachers, inservice teachers, and school administrators studying adolescent development on campus and by distance learning.

The Courage to Teach-Parker J. Palmer 2009-05-18 "This book is for teachers who have good days and bad -- and whose bad days bring the suffering that comes only from something one loves. It is for teachers who refuse to harden their hearts, because they love learners, learning, and the teaching life." - Parker J. Palmer [from the Introduction] Teachers choose their vocation for reasons of the heart, because they care deeply about their students and about their subject. But the demands of teaching cause too many educators to lose heart. Is it possible to take heart in teaching once more so that we can continue to do what good teachers always do -- give heart to our students? In The Courage to Teach, Parker Palmer takes teachers on an inner journey toward reconnecting with their vocation and their students -- and recovering their passion for one of the most difficult and important of human endeavors.

The Well-Trained Mind: A Guide to Classical Education at Home (Third Edition)-Susan Wise Bauer 2009-05-04 "If you're a parent who has decided to educate your children yourself, this book is the first you should buy."—?Washington Times The Well-Trained Mind will instruct you, step by step, on how to give your child an academically rigorous, comprehensive education from preschool through high school—one that will train him or her to read, to think, to ?understand?, to be well-rounded and curious about learning. Veteran home educators Jessie Wise and Susan Wise Bauer outline the classical pattern of education called the trivium, which organizes learning around the maturing capacity of the child’s mind and comprises three stages: the elementary school “grammar stage,” the middle school “logic stage,” and the high school “rhetoric stage.” Using this theory as your model, you’ll be able to instruct your child in all levels of reading, writing, history, geography, mathematics, science, foreign languages, rhetoric, logic, art, and music, regardless of your own aptitude in those subjects. This newly revised edition contains completely updated ordering information for all curricula and books, new and expanded curricula recommendations, new material on using computers and distance-learning resources, answers to common questions about home education, information about educational support groups, and advice on practical matters such as working with your local school board, preparing a high school transcript, and applying to colleges.

Questions Are the Answer-Hal Gregersen 2018-11-13 What if you could unlock a better answer to your most vexing problem—in your workplace, community, or home life—just by changing the question? Talk to creative problem-solvers and they will often tell you, the key to their success is asking a different question. Take Debbie Sterling, the social entrepreneur who created GoldieBlox. The idea came when a friend complained about too few women in engineering and Sterling wondered aloud: “why are all the great building toys made for boys?” Or consider Nobel laureate Richard Thaler, who asked: “would it change economic theory if we stopped pretending people were rational?” Or listen to Jeff Bezos whose relentless approach to problem solving has fueled Amazon’s exponential growth: “Getting the right question is key to getting the right answer.” Great questions like these have a catalytic quality—that is, they dissolve barriers to creative thinking and channel the pursuit of solutions into new, accelerated pathways. Often, the moment they are voiced, they have the paradoxical effect of being utterly surprising yet instantly obvious. For innovation and leadership guru Hal Gregersen, the power of questions has always been clear—but it took some years for the follow-on question to hit him: If so much depends on fresh questions, shouldn’t we know more about how to arrive at them? That sent him on a research quest ultimately including over two hundred interviews with creative thinkers. Questions Are the Answer delivers the insights Gregersen gained about the conditions that give rise to catalytic questions—and breakthrough insights—and how anyone can create them.

The Ethical Algorithm-Michael Kearns 2019-10-04 Over the course of a generation, algorithms have gone from mathematical abstractions to powerful mediators of daily life. Algorithms have made our lives more efficient, more entertaining, and, sometimes, better informed. At the same time, complex algorithms are increasingly violating the basic rights of individual citizens. Allegedly anonymized datasets routinely leak our most sensitive personal information; statistical models for everything from mortgages to college admissions reflect racial and gender bias. Meanwhile, users manipulate algorithms to “game” search engines, spam filters, online reviewing services, and navigation apps. Understanding and improving the science behind the algorithms that run our lives is rapidly becoming one of the most pressing issues of this century. Traditional fixes, such as laws, regulations and watchdog groups, have proven woefully inadequate. Reporting from the cutting edge of scientific research, The Ethical Algorithm offers a new approach: a set of principled solutions based on the emerging and exciting science of socially aware algorithm design. Michael Kearns and Aaron Roth explain how we can better embed human principles into machine code - without halting the advance of data-driven scientific exploration. Weaving together innovative research with stories of citizens, scientists, and activists on the front lines, The Ethical Algorithm offers a compelling vision for a future, one in which we can better protect humans from the unintended impacts of algorithms while continuing to inspire wondrous advances in technology.

completely new guide follows on the success of Resources for Teaching Elementary School Science, the first in the NSRC series of annotated guides to hands-on, inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area-Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type-core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved and of what students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books, and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Keystone Corruption Continues-Brad Bumsted 2016-07-29 Once again, a crime wave swept through Pennsylvania state government. During a 17-month period from early 2015 through mid-2016, a sitting state treasurer, and a former state treasurer, both statewide elected officials who were guardians of taxpayers' money, were charged with crimes, as was an ex-Governor's chief of staff and the attorney general, the state's chief law enforcement officer. It was preceded by a sting investigation that resulted in state legislators videotaped taking cash from an undercover operative posing as a lobbyist and an alleged pay to play scheme at the Pennsylvania Turnpike Commission. Porn and off-color emails on government computers took out two Supreme Court justices. It's all in Brad Bumsted's latest book: "Keystone Corruption Continues: Cash Payoffs, Porngate and the Kathleen Kane Scandal."

Why We're Polarized-Ezra Klein 2020-01-28 The New York Times Bestseller The Wall Street Journal Bestseller "Few books are as well-matched to the moment of their publication as Ezra Klein's Why We're Polarized." —Dan Hopkins, The Washington Post "It is likely to become the political book of the year....Powerful [and] intelligent." —Fareed Zakaria, CNN "Superbly researched and written..." —Francis Fukuyama, The Washington Post America's political system isn't broken. The truth is scarier: it's working exactly as designed. In this book, journalist Ezra Klein reveals how that system is polarizing us—and how we are polarizing it—with disastrous results. "The American political system—which includes everyone from voters to journalists to the president—is full of rational actors making rational decisions given the incentives they face," writes political analyst Ezra Klein. "We are a collection of functional parts whose efforts combine into a dysfunctional whole." In Why We're Polarized, Klein reveals the structural and psychological forces behind America's descent into division and dysfunction. Neither a polemic nor a lament, this book offers a clear framework for understanding everything from Trump's rise to the Democratic Party's leftward shift to the politicization of everyday culture. America is polarized, first and foremost, by identity. Everyone engaged in American politics is engaged, at some level, in identity politics. Over the past fifty years in America, our partisan identities have merged with our racial, religious, geographic, ideological, and cultural identities. These merged identities have attained a weight that is breaking much in our politics and tearing at the bonds that hold this country together. Klein shows how and why American politics polarized around identity in the twentieth century, and what that polarization did to the way we see the world and one another. And he traces the feedback loops between polarized political identities and polarized political institutions that are driving our system toward crisis. This is a revelatory book that will change how you look at politics, and perhaps at yourself.
