Fluorescent Biomolecules-David M. Jameson 2012-12-06 This volume is based on an international symposium held during September 9-12, 1986 in Bocca di Magra, Italy. The intent of the organizers was to bring together expert practitioners of fluorescence spectroscopy, particularly as applied to biological

systems, to assess recent developments in the field and discuss future directions. At the same time the meeting was intended to honor the singular and outstanding scientific career of Gregorio Weber on the occasion of his seventieth birthday. Gregorio Weber is truly the pioneer in the application of fluorescence methods to biochemistry and biophysics. A complete list of his scientific contributions to fluorescence and to protein biochemistry is beyond the scope of this preface. Suffice it to say that since his initial landmark articles on fluorescence, published in the late 1940's and early 1950's, Gregorio Weber has continued to make seminal contributions to both the theory and practice of fluorescence and, contrary to many who might be tempted to rest on their laurels, he shows no signs of slackening his pace. In addition to his more obvious tangible contributions to the scientific field, Gregorio Weber has made equally valuable contributions of another type. Specifically, he has had the most profound impact, both professionally and personally, on generations of young scientists.

The Brain-Shaped Mind-Naomi Goldblum 2001-08-23 Will brain scientists ever be able to read our minds? Why are some things harder to remember than others? Based on recent brain research and neural network modelling, The Brain-Shaped Mind addresses these, and other, questions, and provides a clear account of how the structure of the brain influences the workings of the mind. Neuroscientists are now learning about our minds by examining how the neurones in the brain are connected with one another and the surrounding environment. This book explores how neural networks enable us to recognise objects and learn new things, and what happens when things go wrong. The reader is taken on a fascinating journey into what is arguably one of the most complicated and remarkable aspects of our lives.

Compact Utility Tractors-Dennis David 2013-06-01 Compact Utility Tractors, or CUTs, are cute little cutters! As farming became more refined so did the needs of tractors. The answer was a smaller, more maneuverable and fuel-efficient tractor with a variety of implements and attachments. With this focus on special needs, attachments became available such as plows, disc harrows, mower decks, cultivators, spreaders, snowblowers, and more. They have become a necessary utility for farmers, orchards, small construction jobs, and landscaping/maintenance for estates, parks and golf courses. At the forefront of this evolution was the Farmall Cub and John Deere Model L. Then came the Japanese invasion; a new kind of tractor by companies such as Yanmar and Kubota. These four-wheel drive machines were rugged and tough and used a variety of hydraulically powered attachments. American companies like John Deere, International Harvester, and Massey Ferguson built their own their own four-wheel versions. Today's

compact tractors, such as the Kubota BX series, Massey Ferguson's GC series, and the John Deere 3000, offer an even larger selection of implements for special purposes.

eV manga-James Farr 2020-04-13 Twenty minutes from now, visitors from a far-off world will fall into Earth's orbit and issue a most unexpected request...these "Emissaries" invite a single human being to be selected as a representative for all of Earth in an intergalactic Parliament. Mankind is given five years in which to prepare this volunteer for the rigors of space travel and the intricacies of alien diplomacy. Scientist Dr. Richard Wymond devises the ZETTA serum -- a nano-biological cocktail that will augment its recipient with nearly superhuman abilities. But when Wymond's daughter is mortally injured in a freak accident, he makes a fateful decision, and rather than let her die, he injects Evie with the world's only sample of the ZETTA serum. Now the fate of the world rests on the shoulders of one 17-year-old girl. How will Evie cope with this awesome responsibility? Will she survive the strange political intrigues of Parliament? And more important, are the "Emissaries'" intentions as honorable as they have led us to believe?

Good Derivatives-Richard L Sandor 2012-04-06 Through the eyes of an inventor of new markets, Good Derivatives: A Story of Financial and Environmental Innovation tells the story of how financial innovation - a concept that is misunderstood and under attack - has been a positive force in the last four decades. If properly designed and regulated, these "good derivatives" can open vast possibilities to address a variety of global problems. Filled with provocative ideas, fascinating stories, and valuable lessons, it will provide both an insightful interpretation of the last forty years in capital and environmental markets and a vision of world finance for the next forty years. As a young economist at the Chicago Board of Trade, Richard Sandor helped create interest rate futures, a development that revolutionized worldwide finance. Later, he pioneered the use of emissions trading to reduce acid rain, one of the most successful environmental programs ever. He will provide unique insights into the process of creating these new financial products. Covering successes and failures, the story describes the tireless process of inventing, educating and

creating support for these new inventions in places like Chicago, New York, London, Paris and how it is unfolding today in Mumbai, Shanghai and Beijing. The book will tell the story of the creation of the Chicago Climate Exchange and its affiliated exchanges (European Climate Exchange, Chicago Climate Futures Exchange and Tianjin Climate Exchange, located in China). The lessons learned in these markets can play a critical role in effectively addressing global climate change and other pressing environmental issues. The author argues that market-based trading systems are a far more effective means of reducing pollutants than “command-and-control”. Environmental markets may ultimately help to find solutions to issues such as rainforest destruction, water problems and biodiversity threats. Written in an engaging, narrative style, Good Derivatives will be of interest to both practitioners and general readers who want to better understand the creative process of financial innovation. In the middle of so much distrust of markets, it is also a recipe of how transparent, well-regulated markets can be a force for good in the environmental, health, and social areas.

Twas-Daniel Schaffer 2015-09-29 "Science in the developing world has experienced historic change over the past 30 years. Nations that lacked resources for even basic science have since developed world-class research centres. Men and women who previously had no chance of pursuing scientific careers in their own countries now thrive in home-grown universities and laboratories dedicated to scientific excellence. The World Academy of Sciences (TWAS) has been front and centre during this remarkable transformation. A Voice for Science in the South tells the story of TWAS through the eyes of 11 eminent scientists associated with the Academy. They speak of the organization's challenges and triumphs, and describe what TWAS has meant for their careers and the careers of thousands of scientists in the developing world. They also explore the challenges that lie ahead for TWAS and, more generally, for science in the South. It is a story of unprecedented global change and an account of what must be done to ensure that all nations can share in the benefits that emerge when science is woven into the fabric of society."--
