explored both applied and theoretical aspects of conference interpretation and of sign language interpretation. The Symposium was sponsored by the Scientific Affairs Division of the North Atlantic Treaty Organisation, and we would like to express our thanks to Dr. B. A. Bayraktar of the Scientific Affairs Division and to the Members of the NATO Special Programme Panel on Human Factors for their support. We would also like to thank Dr. F. Benvenuti and his colleagues at the University of Venice for their generous provision of facilities and hospitality for the opening session of the Symposium. Our thanks are also due to Dr. Ernesto Talentino and his colleagues at the Giorgio Cini Foundation who provided such excellent conference facilities and thus helped ensure the success of the meeting. Finally, we would like to express our appreciation and thanks to Becky Graham and Carol Blair for their invaluable contributions to the organization of the Symposium, to Ida Stevenson who prepared these proceedings for publication, and to Donald I. Neuromarketing-Leon Zurawicki 2010-09-02 Over the last 10 years advances in the new field of neuromarketing have yielded a host of findings which defy common stereotypes about consumer behavior. Reason and emotions do not necessarily appear as opposing forces. Rather, they complement one another. Hence, it reveals that consumers utilize mental accounting processes different from those assumed in marketers' logical inferences when it comes to time, problems with rating and choosing, and in post-purchase evaluation. People are often guided by illusions not only when they perceive the outside world but also when planning their actions - and consumer behavior is no exception. Strengthening the control over their own desires and the ability to navigate the maze of data are crucial skills consumers can gain to benefit themselves, marketers and the public. Understanding the mind of the consumer is the hardest task faced by business researchers. This book presents the first analytical perspective on the brain - and biometric studies which open a new frontier in market research.

Psychological Assessment in the Workplace-Mark Cook 2005-06-24 This book covers the assessment of people within the workplace. Written in jargon free language, it offers a guide to psychological assessment that can be used by managers in their everyday work. Each chapter will specifically cover an assessment practice and then explore the issues surrounding it, following this discussion with a case study. Ideas for test selection, guidance on assessment centre practice and illustrations of successfully worked exercises are also included.

The Psychology of the Language Learner-Zoltán Dörnyei 2014-04-04 Research results over the past decades have consistently demonstrated that a key reason why many second language learners fail--while some learners do better with less effort--lies in various learner attributes such as personality traits, motivation, or language aptitude. In psychology, these attributes have traditionally been called "individual differences." The scope of individual learner differences is broad--ranging from creativity to learner styles and anxiety--yet there is no current, comprehensive, and unified volume that provides an overview of the considerable amount of research conducted on various language learner differences, until now. Each chapter in this new volume focuses on a different individual difference variable. Besides a review of the relevant second language literature, Zoltán Dörnyei presents a concise overview of the psychological research involving each topic. A key concern for the author has been to define the various learner factors as measurable constructs and therefore the discussion includes a summary of the most famous tests and questionnaires in each domain. A wide range of readers will benefit from this book--students in linguistics, applied linguistics, modern languages, and psychology programs; second language teachers participating in in-service training courses; and researchers in second language acquisition and psychology.

Psychology for Teachers- 1982-12-01

Diagnostic Interviewing-Michel Hersen 2013-03-09 Perhaps the most difficult milestone in a young clinician's career is the completion of the first interview. For the typical trainee, the endeavor is fraught with apprehension and with some degree of dread. If the interview goes well, there is considerable rejoicing; if it goes badly, much consternation results. Irrespective of the amount of preparation that has taken place before the interview, the neophyte will justifiably remain nervous about this endeavor. Thus, the first edition of Diagnostic Interviewing was devoted to providing a clear outline for the student in tackling a large variety of patients in the interview setting. In consideration of the positive response to the first edition of Diagnostic Interviewing, published in 1985, we and our editor at Plenum Press, Eliot Werner, decided that it was time to update the material. However, the basic premise that a book of this nature needs to encompass theoretical rationale, clinical description, and the pragmatics of "how to" once again has been followed. And, as in the case of the first edition, this second edition does not represent the cat's being skinned in yet another way. Quite to the contrary, we still believe that our students truly need to read the material covered herein with considerable care, and once again the book is dedicated to them. We are particularly concerned that in the clinical education of our graduate students, interviewing has been given short shrift.

The How of Happiness-Sonja Lyubomirsky 2008 Drawing on her own research with thousands of people, psychologist Lyubomirsky has pioneered a detailed yet easy-to-follow plan to increase happiness in our day-to-day lives--in the short and long term. This book that offers a guide to understanding what Factor analysis-Ertel, Suitbert 2013-09-24 Exploratory factor analysis (EFA) is a statistical tool for digging out hidden factors which give rise to the diversity of manifest objectives in psychology, medicine and other sciences. EFA had its heyday as psychologist Leon Thurstone (1935 and 1948) based EFA on what he called the "principle of simple structure" (SS). This principle, however, was erroneous from the beginning what remained unrecognized despite subsequent inventions of more sophisticated statistical tools such as confirmatory analysis and structural equation modeling. These methods are highly recommended today as

tolerable routes to model complexities of observation. But they did not remove the harmful errors that SS had left behind. Five chapters in this book demonstrate and explain the trouble. In chapter 2 the ailment of SS is healed by introducing an unconventional factor rotation, called Varimin. Varimin gives variables of an analysis an optimal opportunity to manifest functional interrelations underlying correlational observations. Ten applications of Varimin (in chapter 2) show that its results are superior to results obtained by the conventional Varimax procedure. Further applications are presented for sports achievements (chapter 3), intelligence (chapter 4), and personality (chapter 5). If Varimin keeps on standing the tests new theoretical building blocks will arise together with conceptual networks promoting a better understanding of the domains under study. Readers may check this prognosis by themselves using the statistical tool (Varimin) which is provided by open access in the internet.

Consumer Behavior-Hawkins 2002 Marketing attempts to influence the way consumers behave. These attempts have implications for the organizations making the attempt, the consumers they are trying to influence, and the society in which these attempts occur. We are all consumers and we are all members of society, so consumer behavior, and attempts to influence it, are critical to all of us. This text is designed to provide an understanding of consumer behavior. This understanding can make us better consumer, better marketers, and better citizens. A primary purpose of this text is to provide the student with a usable, managerial understanding of consumer behavior.-Pref.

Multidisciplinary Aspects of Time and Time Perception-Argiro Vataki 2011-11-22 This book constitutes the documentation of the scientific outcome of the first meeting of the TIMELY network, the International Workshop on Multidisciplinary Aspects of Time and Time Perception, which took place in Athens, Greece, in October 2010. The 21 papers presented were carefully reviewed and selected for inclusion in the book. They cover the following topics: conceptual analysis and measurement of time; exploring factors associated with time perception variability; extending time research to ecologically-valid stimuli and real-world applications; and uncovering the neural correlates of time perception.

A Positive Psychology Perspective on Quality of Life-Anastasia Efklides 2012-11-02 The construct “quality of life (QoL)”, since the 1980s, when it was introduced, is being used mainly in the context of health problems. Areas of one’s life that contribute to QoL are good physical and mental health, efficient cognitive functioning, social support, being able to meet the requirements of professional life, positive emotions, etc (Power, 2003). Work on subjective well-being (SWB), on the other hand, was developed in the context of healthy everyday life; it also has a history of more than 30 years. During this 30-year period factors that have an impact on SWB, such as SES, gender, health, age, and religiosity have been identified

(Diener, 2000). A third independent line of research pertains to what has been called Positive Psychology (Seligman & Csikszentmihalyi, 2000), that is, an emphasis on human strengths, such as optimism, hope, wisdom, positive emotions, resilience, etc., which contribute to positive functioning in life. Recently, SWB has been associated to human strengths and to the movement of positive psychology but this did not happen for QoL, possibly because of its emphasis on people with health problems. However, QoL can be conceived of as a generic term that pertains to all people, healthy or not. In this sense, it is closely related to SWB defined as happiness (Diener, 2000). Also, QoL encompasses positive emotions that go beyond happiness and has the advantage that it can be applied to many different domains of life such as interpersonal relations, health-related situations, and professional and educational strivings. Moreover, the mechanism(s) that underpin QoL and SWB can be studied in relation to people's goals and strengths of character, that is, from a positive psychological perspective. Such a perspective can reveal the specificities of "quality" in the various domains of life and, specifically, the positive emotions and strengths that contribute to a happier, healthier, and more successful life, even in face of adversity. Therefore, despite the differences among the three theoretical traditions, namely QoL, SWB, and positive psychology, it is possible to find the common ground they share and each of them can benefit from notions developed in the others. The aim of the present book is to bring together these three traditions, show the interactions of variables emphasized by them, and give an integrative perspective from the positive psychology point of view. It also aims to extend the range of life situations in which one can look for quality and which go beyond the traditional emphasis of QoL on health problems. Thus, the content of the proposed book covers different age populations (from children to older adults), healthy and people facing health problems as well as people facing problems in their interpersonal lives or in their pursuits. It also discusses factors that contribute to marital satisfaction, well being in the school context, and things that people value and cherish. The chapters refer to notions such as happiness, interest, resilience, wisdom, hope, altruism, optimism, and spirituality/religiosity that represent unique human strengths. Finally, it

emphasizes the role of goals and motivation that connect SWB with self-regulation and managing of one's life priorities. To conclude, the chapters included in the proposed edited book aim at bringing to the fore new theoretical developments and research on QoL, SWB, and positive psychology that bridges previously distinct theoretical traditions. The proposed book covers a broad range of topics, addresses different theoretical interests and paves the way for a more integrative approach. Finally, it brings together an international set of authors, from USA, Europe, Australia, and Asia.

Stumbling on Happiness-Daniel Gilbert 2009-02-24 A smart and funny book by a prominent Harvard psychologist, which uses groundbreaking research and (often hilarious) anecdotes to show us why we're so lousy at predicting what will make us happy - and what we can do about it. Most of us spend our lives steering ourselves toward the best of all possible futures, only to find that tomorrow rarely turns out as we had expected. Why? As Harvard psychologist Daniel Gilbert explains, when people try to imagine what the future will hold, they make some basic and consistent mistakes. Just as memory plays tricks on us when we try to look backward in time, so does imagination play tricks when we try to look forward. Using cutting-edge research, much of it original, Gilbert shakes, cajoles, persuades, tricks and jokes us into accepting the fact that happiness is not really what or where we thought it was. Among the unexpected questions he poses: Why are conjoined twins no less happy than the general population? When you go out

to eat, is it better to order your favourite dish every time, or to try something new? If Ingrid Bergman hadn't gotten on the plane at the end of Casablanca, would she and Bogey have been better off? Smart, witty, accessible and laugh-out-loud funny, *Stumbling on Happiness* brilliantly describes all that science has to tell us about the uniquely human ability to envision the future, and how likely we are to enjoy it when we get there. From the Hardcover edition.

New Visions of Nature-Martin A. M. Drenthen 2009-07-23 "New Visions of Nature" focuses on the emergence of these new visions of complex nature in three domains. The first selection of essays reflects public visions of nature, that is, nature as it is experienced, encountered, and instrumentalized by diverse publics. The second selection zooms in on micro nature and explores the world of contemporary genomics. The final section returns to the macro world and discusses the ethics of place in present-day landscape philosophy and environmental ethics. The contributions to this volume explore perceptual and conceptual boundaries between the human and the natural, or between an 'out there' and 'in here.' They attempt to specify how nature has been publicly and genomically constructed, known and described through metaphors and re-envisioned in terms of landscape and place. By parsing out and rendering explicit these divergent views, the volume asks for a re-thinking of our relationship with nature.

Origin and Mechanisms of Hallucinations-Wolfram Keup 2013-04-17 Hallucinations, a natural phenomenon as old as mankind, have a surprisingly wide range. They appear under the most diversified conditions, in the "normal" psyche as well as in severe chronic mental derangement. As a symptom, hallucinations are a potential part of a variety of pathological conditions in almost all kinds of psychotic behavior. In addition, lately, various psychological and sociological circumstances seem to favor widespread use and abuse of hallucinogens, substances able to produce hallucinations in the normal brain. They not rarely lead to serious psychopathology such as toxic, and mobilized or aggravated endogenous psychoses. While such development adds to our scientific knowledge, it also contributes to our current social troubles. Neurologists and neuro-surgeons, psychiatrists, psychologists and other

specialized researchers constantly have been dealing with the phenomenon, its roots and branches, and yet, its primary mechanisms are largely unknown. However, investigators of hallucinations now seem to enter common ground on which meaningful discussions and joint approaches become feasible and more promising. We have come a long way from the Latin term "hallucinari", meaning to talk nonsense, to be absent-minded, to the modern concept of "hallucinations". While the Latin word was descriptive of what may be due to hallucinations, the modern concept defines hallucinations as subjective experiences that are consequences of mental processes, sometimes fulfilling a purpose in the individual's mental life.

Foundations of Personality-P.J. Hettema 2013-11-11 Differences between people are a fascinating and long-standing area of psychological inquiry. However, previous research has largely been confined to studies at the descriptive level. This book tries to explain individual difference, rather than merely describe them. Explanations are derived from two major competing frameworks: the biological and social approaches to individuality. The book is based on the contributions of specialists from Europe and North America invited to represent the biological and social points of view. Thus, a direct confrontation is obtained of two approaches that, hitherto, have proceeded with virtually no reference to each other. Attention is paid to behavior genetics, psychophysiology and temperament, as well as to social learning, behavioral strategies and person-environment interactions. Differences and commonalities between the biological and social approaches are scrutinized and a common framework is outlined to stimulate future research. Due to its innovative character, the book is particularly relevant for investigators in the field. In addition, it may be fruitfully used in advanced graduate level courses in personality psychology.

Handbook of Individual Differences in Social Behavior-Mark R. Leary 2013-12-17 How do individual differences interact with situational factors to shape social behavior? Are people with certain traits more likely to form lasting marriages; experience test-taking anxiety; break the law; feel optimistic about the future? This handbook provides a comprehensive, authoritative examination of the full range of personality variables associated with interpersonal judgment, behavior, and emotion. The contributors are

acknowledged experts who have conducted influential research on the constructs they address. Chapters discuss how each personality attribute is conceptualized and assessed, review the strengths and limitations of available measures (including child and adolescent measures, when available), present important findings related to social behavior, and identify directions for future study.

Handbook of Environmental Psychology and Quality of Life Research-Ghozlane Fleury-Bahi 2016-08-12

This Handbook presents a broad overview of the current research carried out in environmental psychology which puts into perspective quality of life and relationships with living spaces, and shows how this original analytical framework can be used to understand different environmental and societal issues. Adopting an original approach, this Handbook focuses on the links with other specialties in psychology, especially social and health psychology, together with other disciplines such as geography, architecture, sociology, anthropology, urbanism and engineering. Faced with the problems of society which involve the quality of life of individuals and communities, it is fundamental to consider the relationships an individual has with his different living spaces. This issue of the links between quality of life and environment is becoming increasingly significant with, at a local level, problems resulting from different types of annoyances, such as pollution and noise, while, at a global level, there is the central question of climate change with its harmful consequences for humans and the planet. How can the impact on well-being of environmental nuisances and threats (for example, natural risks, pollution, and noise) be reduced? How can the quality of life within daily living spaces (home, cities, work environments) be improved? Why is it important to understand the psychological issues of our relationship with the global environment (climatic warming, ecological behaviours)? This Handbook is intended not only for students of various disciplines (geography, architecture, psychology, town planning, etc.) but also for social decision-makers and players who will find in it both theoretical and methodological perspectives, so that psychological and environmental dimensions can be better taken into account in their working practices.

Intelligent Virtual Agents-Jan Allbeck 2010-09-03 th Welcome to the proceedings of the 10 International

Conference on Intelligent Virtual Agents (IVA), held 20-22 September, 2010 in Philadelphia, Pennsylvania, USA. Intelligent Virtual Agents are interactive characters that exhibit human-like qualities and communicate with humans or with each other using natural human modalities such as behavior, gesture, and speech. IVAs are capable of real-time perception, cognition, and action that allow them to participate in a dynamic physical and social environment. IVA 2010 is an interdisciplinary annual conference and the main forum for presenting research on modeling, developing, and evaluating Intelligent Virtual Agents with a focus on communicative abilities and social behavior. The development of IVAs - requires expertise in multimodal interaction and several AI fields such as cognitive modeling, planning, vision, and natural language processing. Computational models are typically based on experimental studies and theories of human-human and human-robot interaction; conversely, IVA technology may provide interesting lessons for these fields. Visualizations of IVAs require computer graphics and animation techniques, and in turn supply significant realism problem domains for these fields. The realization of engaging IVAs is a challenging task, so reusable modules and tools are of great value. The fields of application range from robot assistants, social simulation, and tutoring to games and artistic exploration. The enormous challenges and diversity of possible applications of IVAs have - resulted in an established annual conference.

Legal Argumentation Theory: Cross-Disciplinary Perspectives-Christian Dahlman 2012-09-14 This book offers its readers an overview of recent developments in the theory of legal argumentation written by representatives from various disciplines, including argumentation theory, philosophy of law, logic and artificial intelligence. It presents an overview of contributions representative of different academic and legal cultures, and different continents and countries. The book contains contributions on strategic maneuvering, argumentum ad absurdum, argumentum ad hominem, consequentialist argumentation, weighing and balancing, the relation between legal argumentation and truth, the distinction between the context of discovery and context of justification, and the role of constitutive and regulative rules in legal argumentation. It is based on a selection of papers that were presented in the special workshop on Legal

Argumentation organized at the 25th IVR World Congress for Philosophy of Law and Social Philosophy held 15-20 August 2011 in Frankfurt, Germany.

Stress-C.B. Dobson 2012-12-06 This book is intended as an introductory text on stress and is aimed principally at students in the medical, para-medical and nursing professions, and for students of psychology and the social sciences. Additionally, students preparing for other 'caring' professions whose chief concern is with helping people in distress should find the book informative and instructive. Stress is a complex subject and the book will provide students with the opportunity to become acquainted with a multiplicity of topics currently in vogue which are subsumed under the general heading of stress. The book should also enable readers to gain some insight into the symptoms of stress in those whom they are seeking to help, and to empathize with them. A secondary objective of the book is to help readers to understand and come to terms with their own personal stress experiences, especially those which arise in connection with their professional work. The book begins by examining the nature and sources of stress, and highlights the difficulties inherent in attempting to formulate an adequate definition of the concept. There follows a survey of some of the conceptual models of stress which have been produced by researchers in the field, and a related section is also devoted to anxiety. Not all stress is harmful, and its motivational aspects are discussed. Nevertheless, a comprehensive study of the research evidence suggests that stress is detrimental to the organism's well-being, and various general causes of stress are mentioned.

Abilities-Raymond B. Cattell 1971

Benzodiazepines-R.G. Priest 2012-12-06 U. Vianna Filho In his historical evolution, man has been able to dominate nature by means of his technological achievements, his knowledge and his inventiveness, attaining an increasing control over the world and its organization. As a result, his power over his fellow men has also increased, giving him more ,and more responsibility which leads, of necessity, to one existential problem: is the contemporary man, with all his power and knowledge, really happy?

Technological progress has brought him several rights and desires: health, better insight into the future and greater control over his own destiny, but despite all this he still suffers from insecurity and from all the new problems that he has to face, which fact accounts for his imperfections and limitations that inevitably generate anxiety. Anxiety, therefore, constitutes one of the main characteristics of modern man. It can be foreseen today that, in the near future, the entire population of any large city will suffer from anxiety and behave in a 'neurotic' way. Man is seeking relief from pain, suffering and, naturally, also anxiety. Thus all possible efforts are being made to find a solution for this anxiety. The search for substances that are able to eliminate anxiety is one of the constant concerns of modern science, and, in this context, one of the turning points, as we will see in this volume, has been the discovery of the chemical agents known as the benzodiazepines.

Grandad's Story-Albert Turnbull 2013-03-01 Selected diary entries and family album of Gateshead man Albert Turnbull, including engaging details of life in pre-war England.

Emotional Engineering-Shuichi Fukuda 2014-11-19 This book examines how theories of human emotion can be applied to engineering in order to improve product design and value. 'Emotional Engineering Vol. 3' establishes the idea that customer satisfaction can be maximised by using knowledge and experience in a more flexible manner to respond to a fast-changing world. This integration of emotion and knowledge introduces the reader to the concept of Wisdom Engineering. It also highlights the importance of emotion in creating value for the customer, and how this can be achieved by acknowledging a customer's creativity and by facilitating the customization of products for their needs and preferences. As has been identified by neuroscientists, emotion and reason are strongly interconnected, and the increasing complexities and diversification found in the products we use demonstrates the growing significance of emotion when designing these products. Society is comprised of humans and artificial products; their integration is important when considering product design, and improving quality-of-life for the customer. 'Emotional Engineering Vol. 3' builds on Dr Fukuda's previous books, 'Emotional Engineering' and 'Emotional

Engineering Vol. 2', and is intended for researchers and professionals in engineering, psychology, management of technology, economics.

Cattle Behaviour and Welfare-Clive Phillips 2008-04-15 Cattle are one of our major domesticated animals, a higher mammal with complex mental and physical needs. The benefit of a knowledge of cattle behaviour means veterinarians and stockpeople can recognise abnormal behaviour signs for disease diagnosis and indication of an inadequate environment. This book replaces the book *Cattle Behaviour*, written by the same author and published by Farming Press in 1993. The text has been revised and updated and four new chapters on cattle welfare have been added. The main interest of many reading a book on behaviour is its relation to the welfare of the species, so the combination of welfare and behaviour is a logical one. **Predisposed**-John R. Hibbing 2013-09-23 Buried in many people and operating largely outside the realm of conscious thought are forces inclining us toward liberal or conservative political convictions. Our biology predisposes us to see and understand the world in different ways, not always reason and the careful consideration of facts. These predispositions are in turn responsible for a significant portion of the political and ideological conflict that marks human history. With verve and wit, renowned social scientists John Hibbing, Kevin Smith, and John Alford—pioneers in the field of biopolitics—present overwhelming

evidence that people differ politically not just because they grew up in different cultures or were presented with different information. Despite the oft-heard longing for consensus, unity, and peace, the universal rift between conservatives and liberals endures because people have diverse psychological, physiological, and genetic traits. These biological differences influence much of what makes people who they are, including their orientations to politics. Political disputes typically spring from the assumption that those who do not agree with us are shallow, misguided, uninformed, and ignorant. Predisposed suggests instead that political opponents simply experience, process, and respond to the world differently. It follows, then, that the key to getting along politically is not the ability of one side to persuade the other side to see the error of its ways but rather the ability of each side to see that the other is different, not just politically, but physically. Predisposed will change the way you think about politics and partisan conflict. As a bonus, the book includes a "Left/Right 20 Questions" game to test whether your predispositions lean liberal or conservative.

Advances in Emotion Regulation: From Neuroscience to Psychotherapy-Alessandro Grecucci 2017-08-24 Emotions are the gift nature gave us to help us connect with others. Emotions do not come from out of nowhere. Rather, they are constantly generated, usually by stimuli in our interpersonal world. They bond us to others, guide us in navigating our social interactions, and help us care for each other. Paraphrasing Shakespeare, "Our relationships are such stuff as emotions are made of". Emotions express our needs and desires. When problems happen in our relationships, emotions arise to help us fixing those problems.

However, when emotions can become dysregulated, pathology begins. Almost all forms of psychopathology are associated with dysregulated emotions or dysregulatory mechanisms. These dysregulated emotions can become regulated when the therapist helps clients express, face and regulate their emotions, and channel them into healthy actions. This research topic gathers contributions from affective neuroscientists and psychotherapists to illustrate how our emotions become dysregulated in life and can become regulated through psychotherapy.

The Myers-Briggs Type Indicator-Rowan Bayne 1997 The Myers-Briggs Type Indicator (MBTI) is a development of the work of Carl Jung, who suggested the basic personality types of introversion and extraversion and the components of intuition, sensation, thinking and feeling. The indicator provides insights into and offers a framework for use in counselling, education, careers guidance and management.

Wrist Disorders-Ryogo Nakamura 2012-12-06 In recent years wrist problems have increasingly attracted the attention of orthopaedic and hand surgeons. Numerous advances have been achieved in functional anatomy, biomechanics, diagnosis, and treatment. There are, however, many controversial aspects to these problems. Many clinical and associated investigators from around the world have attempted to increase our knowledge of the wrist with enthusiastic and devoted studies. An international symposium was held at the Nagoya Castle Hotel, Nagoya, Japan from March 6th through March 8th, 1991 to further understanding and promote discussion of wrist problems among a representative international group. Approximately 300 participants from 16 different countries assembled for these discussions. This monograph consists of 40 selected papers based on presentations given at the international symposium. The topics are divided into six chapters: Functional Anatomy, Diagnosis and Basic Studies; Kienbock's Disease; Scaphoid Fracture, Distal Radius Fracture; Carpal Instability and Wrist Pain; and Wrist Arthroplasty. A number of unique observations as well as detailed surgical techniques were presented. These include topics such as the vascularity of the triangular fibrocartilage, radial wedge osteotomy and vascular bundle implantation into the lunate for Kienbock's disease, Herbert screw insertion though a

minimal exposure for acute scaphoid fracture, and closing wedge osteotomy of the radial styloid for the early stage of the SLAC wrist. It is hoped that this monograph will be of benefit to surgeons interested in not only achieving more satisfactory clinical outcomes, but also in stimulating further contemplation and research about these difficult wrist problems.
