Routledge Handbook of Food as a Commons-Jose Luis Vivero-Pol 2018-12-21 From the scientific and industrial revolution to the present day, food - an essential element of life - has been progressively transformed into a private, transnational, mono-dimensional commodity of mass consumption for a global market. But over the last decade there has been an increased recognition that this can be challenged and reconceptualized if food is regarded and enacted as a commons. This Handbook provides the first comprehensive review and synthesis of knowledge and new thinking on how food and food systems can be thought, interpreted and practiced around the old/new paradigms of commons and commoning. The overall aim is to investigate the multiple constraints that occur within and sustain the dominant food and nutrition regime and to explore how it can change when different elements of the current food systems are explored and re-imagined from a commons perspective. Chapters do not define the notion of commons but engage with different schools of thought: the economic approach, based on rivalry and excludability; the political approach, recognizing the plurality of social constructions and incorporating epistemologies from the South; the legal approach that describes three types of proprietary regimes (private, public and collective) and different layers of entitlement (bundles of rights); and the radical-activist approach that considers the commons as the most subversive, coherent and history-rooted alternative to the dominant neoliberal narrative. These schools have different and rather diverging epistemologies, vocabularies, ideological stances and policy proposals to deal with the construction of food systems, their governance, the distributive implications and the socio-ecological impact on Nature and Society. The book sparks the debate on food as a commons between and within disciplines, with particular attention to spaces of resistance (food sovereignty, de-growth, open knowledge, transition town, occupations, bottom-up social innovations) and organizational scales (local food, national policies, South-South collaborations, international governance and multi-national agreements). Overall, it shows the consequences of a shift to the alternative paradigm of food as a commons in terms of food, the planet and living beings.

of Work, 2019-2023. World health statistics 2018 is organised into three parts. First, in order to improve understanding and interpretation of the data presented, Part 1 outlines the different types of data used and provides an overview of their compilation, processing and analysis. The resulting statistics are then publicised by WHO through its flagship products such as the World Health Statistics series. In Part 2, summaries are provided of the current status of selected health-related SDG indicators at global and regional levels, based on data available as of early 2018. In Part 3, each of these three strategic priorities of achieving universal health coverage (UHC), addressing health emergencies and promoting healthier populations are illustrated through the use of highlight stories. In Annexes A and B, country-level statistics are presented for selected health-related SDG indicators. Annex B presents statistics at WHO regional and global levels.

Basic Electronics-B. L. Theraja 2009

Biological Espionage-Alexander Kouzminov 2005 In the wake of 9/11 the threat of biological terrorism and sabotage has been thrust to the forefront of public consciousness. However, this is far from being a new phenomenon. From World War II onwards, the Cold War powers devoted considerable resources to

developing what became known in the military as 'bugs and gas'. This groundbreaking study lifts the lid on the top-secret Department 12 of Directorate S (Special Operations) v the elite inner core of the KGB First Chief Directorate and its successor, the Russian Foreign Intelligence Service. During the 1980s and early 1990s the department encouraged biological espionage, the planning and preparation of biological terrorism and acts of sabotage. Their work was carried out primarily through illegals v intelligence operatives who were secretly deployed to the West and covertly operated there, masquerading as citizens of Western countries under assumed names and cover stories. One of its top operatives, Alexander Kouzminov, has decided to break his silence and reveal in depth for the first time the department's tasks, plans and tactics. More disturbingly, he explores what others in the West and the developing world are and could be capable of. In this remarkable book we learn the secrets of the USSR's elite intelligence operatives v secrets which could prove vital in maintaining international security in today's uncertain political climate.
