Perspectives on Mathematics Education-H. Christiansen 2012-12-06 BACOMET cannot be evaluated solely on the basis of its publications. It is important then that the reader, with only this volume on which to judge both the BACOMET activities and its major outcome to date, should know some thing of what preceded this book's publication. For it is the story of how a group of educators, mainly tutors of student-teachers of mathematics, com mitted themselves to a continuing period of work and self-education. The concept of BACOMET developed during a series of meetings held in 1978-79 between the three editors, Bent Christiansen, Geoffrey Howson and Michael Otte, at which we expressed our concern about the contributions from mathematics education as a discipline to teacher education, both as we observed it and as we participated in it. The short time which was at the teacher-educator's disposal, allied to the limited knowledge and experience of the students on which one had to build, raised puzzling problems concerning priorities and emphases. The recognition that these problems were shared by educators from many different countries was matched by the fact that it would be fruitless to attempt to search for an internationally (or even nationally) acceptable solution to our problems. Different contexts and traditions rule this out.

Performance Standards in Education-Centre pour la recherche et l'innovation dans l'enseignement 1995 Since the early 1980s, policymakers, practitioners, and researchers in member countries of the Organisation for Economic Co-Operation and Development (OECD) have shown unprecedented interest in the setting and evaluating of educational standards and in improving assessment procedures. This book is the outcome of a study undertaken by the OECD in 1994 at the request of the Government of the United States. A conference held in Paris in December 1993 launched the study; experts from 10 OECD countries were then commissioned to write case-study reports, which were presented at a seminar in Paris in October 1994. The study was carried out under the auspices of the Center for Educational Research and Innovation (CERI) and the Education Committee. The book contains an overview by John Lowe, followed by the 10 case studies from Australia, Canada (Ontario), England and Wales, France, Germany (North Rhine-Westphalia), Ireland, Japan, Spain, Sweden, and the United States. A synthesis offers a functional model of reform and considers the ways in which the United States and other governments could profit from the case studies. A total of 15 tables and 24 figures are included. (LMI)
