Transforming Health Care Scheduling and Access-Institute of Medicine 2015-08-24 According to Transforming Health Care Scheduling and Access, long waits for treatment are a function of the disjointed manner in which most health systems have evolved to accommodate the needs and the desires of doctors and administrators, rather than those of patients. The result is a health care system that deploys its most valuable resource--highly trained personnel--inefficiently, leading to an unnecessary imbalance between the demand for appointments and the supply of open appointments. This study makes the case that by

using the techniques of systems engineering, new approaches to management, and increased patient and family involvement, the current health care system can move forward to one with greater focus on the preferences of patients to provide convenient, efficient, and excellent health care without the need for costly investment. Transforming Health Care Scheduling and Access identifies best practices for making significant improvements in access and system-level change. This report makes recommendations for principles and practices to improve access by promoting efficient scheduling. This study will be a valuable resource for practitioners to progress toward a more patient-focused "How can we help you today?" culture.

Geographic Adjustment in Medicare Payment-Institute of Medicine 2012-04-23 Medicare is the largest health insurer in the United States, providing coverage for 39 million people aged 65 and older and 8

million people with disabilities, and reaching more than an estimated \$500 billion in payments in 2010. Although Medicare is a national program, it adjusts fee-for-service payments according to the geographic location of a practice. While there is widespread agreement about the importance of providing accurate payments to providers, there is disagreement about how best to adjust payment based on geographic location. At the request of Congress and the Department of Health and Human Services (HHS), the Institute of Medicine (IOM) examined ways to improve the accuracy of data sources and methods used for making the geographic adjustments to payments. The IOM recommends an integrated approach that includes moving to a single source of wage and benefits data; changing to one set of payment areas; and expanding the range of occupations included in the index calculations. The first of two reports, *Geographic Adjustment in Medicare Payment: Phase I: Improving Accuracy*, assesses existing practices in regards to accuracy, criteria consistency, evidence for adjustment, sound rationale, transparency, and separate policy adjustments to reform the current payment system. Adopting the recommendations outlined in this report will mean a change in the way that the indexes are calculated, and will require a combination of legislative, rule-making, and administrative actions, as well as a period of public comment. *Geographic Adjustment in Medicare Payment* will inform the work of government agencies such as HHS, the Centers for Medicare and Medicaid Services, congressional members and staff, the health care industry, national professional organizations and state medical and nursing societies, and Medicare advocacy groups.
