Microeconomics and Behaviour-Robert H. Frank 2016-08-01

Microeconomics and Behaviour-Pierre De Villiers 2011-02 This text covers the topics of intermediate microeconomics in South Africa while exploring the relationship between economic analysis and human behaviour. A clear narrative, a wide variety of Southern African examples and applied practical problems help students learn how to think like economists and apply economics in business and life.

Microeconomics and Behavior-Robert Frank 2014-01-11 Robert Frank's Microeconomics and Behavior covers the essential topics of microeconomics while exploring the relationship between economic analysis and human behavior. Core analytical tools are embedded in a uniquely diverse collection of examples and applications to illuminate the power and versatility of the economic way of thinking. Students are encouraged to become "Economic Naturalists" who see the mundane details of ordinary existence in a sharp new light.

Competition Law and Economic Regulation in Southern Africa-Jonathan Klaaren 2017-07-04 Shaping markets through competition and economic regulation is at the heart of addressing the development challenges facing countries in southern Africa. The contributors to Competition Law and Economic Regulation: Addressing Market Power in southern Africa critically assess the efficacy of the competition and economic regulation frameworks, including the impact of a number of the regional competition authorities in a range of sectors throughout southern Africa. Featuring academics as well as practitioners in the field, the book addresses issues common to southern African countries, where markets are small and concentrated, with particularly high barriers to entry, and where the resources to enforce legislation against anti-competitive conduct are limited. What is needed, the contributors argue, is an understanding of competition and regional integration as part of an inclusive growth agenda for Africa. By examining competition and regulation in a single framework, and viewing this within the southern African experience, this volume adds new perspectives to the global competition literature. It is an essential reference tool and will be of great interest to policymakers and regulators, as well as the rapidly growing ecosystem of legal practitioners and economists engaged in the field.

Behavioral Economics-Edward Cartwright 2014-04-04 This textbook is a first major introduction to behavioral economics, designed primarily for advanced undergraduate students. Unquestionably the hottest new field to have emerged in the social sciences over the past decade, behavioral considerations are now making themselves felt across academia and beyond and books such as Richard Thaler and Cass Sunstein's Nudge have become blueprints for a new way of thinking. This text will introduce all the key concepts to a student audience. Although grounded in game theory and experimental economics, the focus of the text is very much on Behavior as opposed to Games. The field is presented as a coherent subject and the text covers a host of cutting edge developments including the analysis of fairness, reciprocity and altruism, as well as the brave new frontier of neuroeconomics.

Microeconomics-Samuel Bowles 2009-12-13 In this novel introduction to modern microeconomic theory, Samuel Bowles returns to the classical economists' interest in the wealth and poverty of nations and people, the workings of the institutions of capitalist economies, and the coevolution of individual preferences and the structures of markets, firms, and other institutions. Using recent advances in evolutionary game theory, contract theory, behavioral experiments, and the modeling of dynamic processes, he develops a theory of how economic institutions shape individual behavior, and how institutions evolve due to individual actions, technological change, and chance events. Topics addressed include institutional innovation, social preferences, nonmarket social interactions, social capital, equilibrium unemployment, credit constraints, economic power, generalized increasing returns, disequilibrium outcomes, and path dependency. Each chapter is introduced by empirical puzzles or historical episodes illuminated by the modeling that follows, and the book closes with sets of problems to be solved by readers seeking to improve their mathematical modeling skills. Complementing standard mathematical analysis are agent-based computer simulations of complex evolving systems that are available online so that readers can experiment with the models. Bowles concludes with the time-honored challenge of "getting the rules right," providing an evaluation of markets, states, and communities as contrasting and yet sometimes synergistic structures of governance. Must reading for students and scholars not only in economics but across the behavioral sciences, this engagingly written and compelling exposition of the new microeconomics moves the field beyond the conventional models of prices and markets toward a more accurate and policy-relevant portrayal of human social behavior.

How Behavioral Economics Influences Management Decision-Making-Kelly Monahan 2018-08-02 How Behavioral Economics Influences Management Decision-Making: A New Paradigm critically reexamines the management function in 21st century workplaces. The book seeks to examine and explain the real-world behaviors of employees and acknowledge the human nature that binds us all together and how to appeal to these characteristics in order to help organizations prosper. It explores well-observed but rarely understood features of employee cognition and irrationality, challenging the dominant discourse and offering an alternative to gain greater competitive advantage in today's complex markets. It also provides an effective new framework on the best ways to develop relevant management skills as they pertain to hiring, performance management, change management, employee engagement, and goal setting. As the knowledge economy continues to grow, the social bonds within companies will prove to be a key differentiation to deliver on the next big idea. Developing productive decisions with staff in the talent-driven global economy increasingly requires the development of "intrinsic" meaning in work, a human-centered work-place culture, and human-focused working practices. This book tackles these topics in comprehensive and efficient detail. Provides a framework to simply and effectively apply behavioral principles in organizations of any size Focuses on agent motivations and behavior and how they directly impact talent management in the knowledge economy Highlights empirical studies, detailing the impact of heuristics on hiring, performance management, change management, employee engagement, and goal-setting decisions

Economics-Mark P. Taylor 2013-07-22 This dedicated South African edition of Prof. N. Gregory Mankiw and Prof. Mark P. Taylor's Economics combines up-to-date South African content and examples with a robust conceptual understanding of the subject using contemporary approaches to theory. The edition retains the features which have made the title so popular with students and instructors, including: The classic ten principles approach to economics - introduced in Chapter One and then referred to throughout the book designed to help build a framework for understanding. A rigorous emphasis throughout on 'thinking like an economist' - adopting the tools, methods and concepts economists use in addressing problems and issues. The main body of the text has been expertly tailored to South African students, encouraging them to apply the information and data supplied to their own environment and experiences.

Behavioural Economics and Finance-Michelle Baddeley 2018-10-17 Behavioural economics and behavioural finance are rapidly expanding fields that are continually growing in prominence. While orthodox economic models are built upon restrictive and simplifying assumptions about rational choice and efficient markets, behavioural economics offers a robust alternative using insights and evidence that rest more easily with our understanding of how real people think, choose and decide. This insightful textbook introduces the key concepts from this rich, interdisciplinary approach to real-world decision-making. This new edition of Behavioural Economics and Finance is a thorough extension of the first edition, including updates to the key chapters on prospect theory; heuristics and bias; time and planning; sociality and identity; bad habits; personality, moods and emotions; behavioural macroeconomics; and well-being and happiness. It also includes a number of new chapters dedicated to the themes of incentives and motivations, behavioural public policy and emotional trading. Using pedagogical features such as chapter summaries and revision questions to enhance reader engagement, this text successfully blends economic theories with cutting-edge multidisciplinary insights. This second edition will be indispensable to anyone interested in how behavioural economics and finance can

inform our understanding of consumers' and businesses' decisions and choices. It will appeal especially to undergraduate and graduate students but also to academic researchers, public policy-makers and anyone interested in deepening their understanding of how economics, psychology and sociology interact in driving our everyday decision-making.

Behavioral Economics for Tourism-Milena S. Nikolova 2020-09-24 Behavioral Economics for Tourism applies behavioral perspectives to business and policy challenges in the tourism industry. The book enables professionals and early career researchers to succeed by focusing on market and consumer trends, technological advancements, and the modern tourist. It covers the transformation of purchasing decisions, tourism hosting dynamics, digital mediation and disintermediation of tourism organizations, service design, and planning policy considerations. The volume concludes with case studies illustrating successful and unsuccessful behavioral tactics and strategies for tourism businesses and organizations. Provides behavioral profiling of the digitally-informed, mobile, self-managed tourist Allows the tourism industry to better understand tourists, both cognitively and emotionally Supports business success, technology development and sustainability in the tourism industry Features case studies on behavioral tactics and strategies for use in tourism

Institutional Constraints to Small Farmer Development in Southern Africa-Ajuruchukwu Obi 2011-04-27 The Southern Africa region has experienced more than its fair share of problems in recent years. Just when it seemed that the hardships wrought by the devastating cycle of droughts and floods of 2000 to 2002 were a thing of the past, other problems emerged. At one level, there have been the weak and often erratic governance mechanisms and political crises in some countries of the region, leading to severe disruptions in agricultural production to the point that supplies and markets have virtually disappeared. At another level, socio-cultural rigidities have often militated against the adoption of efficient farming practices, resulting in sub-optimal choices that lock smallholders into a low equilibrium trap. In the face of the disappearing supplies and missing markets, these have engendered hyper-inflationary trends of a magnitude unknown anywhere else in the world. But in the midst of all this apparent dreariness, cases are emerging from which immense lessons can be drawn. This book assembles a collection of research papers based on studies completed in 2008 and 2009 in Southern Africa that examine various dimensions of the institutional constraints small farmers are facing in the region and how they are going about dealing with them. The papers draw from these diverse and polar experiences and present some theoretical and practical insights that should form the basis for more in-depth, country-level, sector-specific analyses, focusing mainly on citrus, horticultures, cotton and livestock. The thematic issues of income inequality, land reform, natural resource management and value chain governance and chain choice, are covered in this book and are expected to be of interest for a wide constituency, including researchers, development practitioners, rural animators, and policy makers.

Routledge Handbook of Behavioral Economics-Roger Frantz 2016-08-05 There is no doubt that behavioral economics is becoming a dominant lens through which we think about economics. Behavioral economics is not a single school of thought but representative of a range of approaches, and uniquely, this volume presents an overview of them. The wide spectrum of international contributors each provides an exploration of a central approach, aspect or topic in behavioral economics. Taken together, the whole volume provides a comprehensive overview of the subject which considers both key developments and future possibilities. Part One presents several different approaches to behavioural economics, including George Katona, Ken Boulding, Harvey Leibenstein, Vernon Smith, Herbert Simon, Gerd Gigerenzer, Daniel Kahneman, and Richard Thaler. This section looks at the origins and development of behavioral economics and compares and contrasts the work of these scholars who have been so influential in making this area so prominent. Part Two presents applications of behavioural economics including nudging; heuristics; emotions and morality; behavioural political economy, education, and economic innovation. The Routledge Handbook of Behavioral Economics is ideal for advanced economics students and faculty who are looking for a complete state-of-the-art overview of this dynamic field.

Micro, Small, and Medium Enterprises in Vietnam-John Rand 2020-02-06 This is an open access title available under the terms of a CC BY-NC-ND 3.0 IGO licence. It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations. Micro, Small, and Medium Enterprises in Vietnam provides a comprehensive analytic contribution to a crucial topic within development economics. Based on fifteen years of continued data collection and research efforts it brings together nine up-to-date studies on micro, small, and medium enterprise (SME) development in a coherent framework to help persuade national and international policymakers of the need to take the international call for a data revolution seriously. This edited volume provides an in-depth evaluation of the development of private sector formal and informal manufacturing SMEs in Vietnam over the past decade, combining a unique primary data source with the best panel data and analytical tools available. It generates a comprehensive understanding of the impact of business risks, credit access, institutional characteristics, and government policies, and makes available a set of materials and studies of use to academics, students, and development practitioners interested in an integrated approach to the study of growth, private sector development, and the microeconomic analysis of SME development in a fascinating developing country. Micro, Small, and Medium Enterprises in Vietnam serves as a lense through which other countries, and the international development community at large, may wish to approach the massive task of pursuing a meaningful data revolution as an integral element of the Sustainable Development Goals agenda.

Handbook of Behavioral Economics - Foundations and Applications 1- 2018-09-27 Handbook of Behavioral Economics: Foundations and Applications presents the concepts and tools of behavioral economics. Its authors are all economists who share a belief that the objective of behavioral economics is to enrich, rather than to destroy or replace, standard economics. They provide authoritative perspectives on the value to economic inquiry of insights gained from psychology. Specific chapters in this first volume cover reference-dependent preferences, asset markets, household finance, corporate finance, public economics, industrial organization, and structural behavioural economics. This Handbook provides authoritative summaries by experts in respective subfields regarding where behavioral economics has been; what it has so far accomplished; and its promise for the future. This taking-stock is just what Behavioral Economics needs at this stage of its so-far successful career. Helps academic and non-academic economists understand recent, rapid changes in theoretical and empirical advances within behavioral economics Designed for economists already convinced of the benefits of behavioral economics and mainstream economists who feel threatened by new developments in behavioral economics Written for those who wish to become quickly acquainted with behavioral economics

Game Theory and Exercises-Gisèle Umbhauer 2016-01-08 Game Theory and Exercises introduces the main concepts of game theory, along with interactive exercises to aid readers' learning and understanding. Game theory is used to help players understand decision-making, risk-taking and strategy and the impact that the choices they make have on other players; and how the choices of those players, in turn, influence their own behaviour. So, it is not surprising that game theory is used in politics, economics, law and management. This book covers classic topics of game theory including dominance, Nash equilibrium, backward induction, repeated games, perturbed strategies, beliefs, perfect equilibrium, Perfect Bayesian equilibrium and replicator dynamics. It also covers recent topics in game theory such as level-k reasoning, best reply matching, regret minimization and quantal responses. This textbook provides many economic applications, namely on auctions and negotiations. It studies original games that are not usually found in other textbooks, including Nim games and traveller's dilemma. The many exercises and the inserts for students throughout the chapters aid the reader's understanding of the concepts. With more than 20 years' teaching experience, Umbhauer's expertise and classroom experience helps students understand what game theory is and how it can be applied to real life examples. This textbook is suitable for both undergraduate and postgraduate students who study game theory, behavioural economics and microeconomics.

Economic Theory and Cognitive Science-Don Ross 2005 A hilariously funny cookbook-cum-how-I-did-it memoir by the chef/restaurateur who created New York's dazzling Ápizz restaurant. At the age of thirty-seven, John LaFemina left a lucrative career as a jeweler to become a chef. Instead of going back to school, or getting on-the-job training, he did it the hard way: he bought the restaurant and then taught himself to cook. Today he owns two of New York's great Italian restaurants-Ápizz and Peasant-and is one of the city's most-talked-about chefs, earning rave reviews from fans and critics. In this gorgeous cookbook, he not only shares scores of recipes, but describes his life as a Canarsie boy learning about meatballs and macaroni in his mother's kitchen-and reveals how he drew on a lifetime of Italian cooking, and his own hard work and exquisite taste to create his dream restaurant from scratch. LaFemina takes us step-by-step through the process of finding the perfect location (and figuring out how many meatballs you have to sell to pay the rent), designing a restaurant, procuring all the necessary permits and licenses, and creating the menu. And this is just the first part of running a restaurant. He shares his experiences in dealing with the public and the press, unexpected disasters, and finally, basking in the glory of a popular restaurant. Along with his inspiring story, John

LaFemina also shares 100 mouthwatering recipes, including: Lasagna with Braised Wild Boar Mushroom Risotto Veal, Beef, and Pork Meatballs with Ricotta Filling Open Ravioli with Roasted Butternut Squash Creamsicle Panna Cotta Chocolate Banana Bread Pudding

The Cognitive Basis of Institutions-Shinji Teraji 2018-02-16 The Cognitive Basis of Institutions: A Synthesis of Behavioral and Institutional Economics synthesizes modern research in behavioral economics with traditional institutional economics. This work emphasizes that institution and agent are inextricably linked, and that both cognitive and institutional processes coalesce to influence human decision-making. It integrates cognition and institution through the behavioral economics theoretical lens of bounded rationality. Methodologically, it develops game-theoretical, complexity and neuroeconomic solutions to unite study of the two areas. The work concludes by proposing general implications for the economic study of decisions using the cognitive-institutional approach, also providing specific recommendations for public policy. Reveals how institutional structures and individual actions interact and coevolve cognitively Connects individual decision-making, decision-making processes and institutional formation Unites our understanding of cooperative 'prosocial' behavior with the institutional dynamics that may create it Discusses the implications of the behavioral-institutional paradigm for paternalism and libertarianism in public policy

An Introduction to the Economic Theory of Market Behavior-Donald W. Katzner 2006-01-01 'This is an important, rigorous, and thoroughly engaging text on the economic theory of market behavior. It is unique in the attention devoted to the philosophical underpinnings and the historical background of the Walrasian Theory. Professor Katzner challenges his readers to understand the strengths and the limitations of what has gone before, and he provides guidance as to how he would like to see price theory develop in the future. This is among those rare texts that is designed to inspire further research.' - Hugo Sonnenschein, University of Chicago, US

The Representative Agent in Macroeconomics-James E Hartley 2002-01-04 Representative agent models have become a predominant means of studying the macroeconomy in modern economics without there being much discussion in the literature about their propriety or usefulness. This volume evaluates the use of these models in macroeconomics, examining the justifications for their use and concluding that representative agent models are neither a proper nor a particularly useful means of studying aggregate behaviour.

The Analysis of Household Surveys-Angus Deaton 1997 Using data from several countries, including Cote d'Ivoire, India, Pakistan, Taiwan, and Thailand, this book analyzes household survey data from developing countries and illustrates how such data can be used to cast light on a range of short-term and long-term policy issues.

Africa's Information Revolution-James T. Murphy 2015-04-20 "Confronts current information and communication technologies for development (ICT4D) discourse by providing a counter to largely optimistic mainstream perspectives on Africa's prospects for m- and e-development"--

Neoliberalism-Mark Whitehead 2017-09-11 Many governments in the developed world can now best be described as 'neoliberal': having a combination of neoliberal principles with policy initiatives derived from insights in the behavioural sciences. Neoliberalism presents the results of the first critical global study of the impacts of the behavioural sciences on public policy and government actions, including behavioural economics, behavioural psychology and neuroeconomics. Drawing on interviews with leading behaviour change experts, organizations and policy-makers, and discussed in alignment with a series of international case studies, this volume provides a critical analysis of the ethical, economic, political and constitutional implications of behaviourally oriented government. It explores the impacts of the behavioural sciences on everyday life through a series of themes, including: understandings of the human subject; interpretations of freedom; the changing form and function of the state; the changing role of the corporation in society; and the design of everyday environments and technologies. The research presented in this volume reveals a diverse set of neoliberal approaches to government that offer policy-makers and behaviour change professionals a real choice in relation to the systems of behavioural government they can implement. This book also argues that the behavioural sciences have the potential to support much more effective systems of government, but also generate new ethical concerns that policy-makers should be aware of.

Microeconomics and Behavior-Robert H. Frank 1994

Advances in Applied Economic Research-Nicholas Tsounis 2017-06-07 This proceedings volume aims to provide new research methods, theories and applications from various areas of applied economic research. Featuring papers from the 2016 International Conference on Applied Economics (ICOAE) organized by the University of Nicosia and the Western Macedonia University of Applied Sciences, this volume presents cutting edge research from all areas of economic science that use applied econometrics as the method of analysis. It also features country specific studies with specific economic policy analyses and proposals. Applied economics is a rapidly growing field of economics that combines economic theory with econometrics to analyse economic problems of the real world usually with economic policy interest. ICOAE is an annual conference started in 2008 with the aim to bring together economists from different fields of applied economic research in order to share methods and ideas. The goal of the conference and the enclosed papers is to allow for an exchange of experiences with different applied econometric methods and to promote joint initiatives among well-established fields like macro- and microeconomics, international economics, finance, agricultural economics, health economics, education economics, international trade theory and management and marketing strategies. Featuring global contributions, this book will be of interest to researchers, academics, professionals and policy makers in the field of applied economics and econometrics.

The Political Economy of Dictatorship-Ronald Wintrobe 2000-09-25 This book uses rational choice theory to understand the behaviour of dictators.

The Oxford Handbook of Christianity and Economics-Paul Oslington 2014-01-31 Many important contemporary debates cross economics and religion, in turn raising questions about the relationship between the two fields. This book, edited by a leader in the new interdisciplinary field of economics and religion and with contributions by experts on different aspects of the relationship between economics and Christianity, maps the current state of scholarship and points to new directions for the field. It covers the history of the relationship between economics and Christianity, economic thinking in the main Christian traditions, and the role of religion in economic development, as well as new work on the economics of religious behavior and religious markets and topics of debate between economists and theologians. It is essential reading for economists concerned with the foundations of their discipline, historians, moral philosophers, theologians seeking to engage with economics, and public policy researchers and practitioners.

Social Neuroeconomics-Jens Harbecke 2020-09-23 Neuroeconomics has emerged as a paradigmatic field where neuroscience and the social sciences are integrated in one analytical and empirical approach. However, the different disciplines involved often only relate to each other via the shared object of research, and less through the constructing of precise models of integrative mechanisms. Social Neuroeconomics explores the potential of philosophical and methodological reflections in the neurosciences and the social sciences to inform those efforts at cross-disciplinary integration, with a special focus on recent contributions to mechanistic explanations. The collected essays are drawn from the fields of neuroscience, psychology, economics, sociology and philosophy, and examine the ways and methods of constructing unified conceptual frameworks that can guide empirical work and hypothesis building. This is demonstrated in a range of applications, particularly regarding finance and consumer behavior. The concept of the 'social brain' is also explored; a multilevel framework in which complex analytical categories such as emotions or socially mediated cognitive processes connect neuronal and social phenomena in specific mechanisms that generate behavior. This book addresses a wide audience across the various disciplines, reaching from the neurosciences to the social sciences and philosophy.

Economics After the Crisis-Irene van Staveren 2014-12-05 Economics After the Crisis is an introductory economics textbook, covering key topics in micro and macro economics. However, this book differs from other introductory economics textbooks in the perspective it takes, and it incorporates issues that are presently underserved by existing textbooks on the market. This book offers an introduction to economics that takes into account criticisms of the orthodox approach, and which acknowledges the role that this largely Western approach has played in the current global financial and economic crisis. A key feature of the book is its global approach: it offers examples from countries all

over the world, including from developing and emerging economies. The chapters discuss all major economic topics, including individuals and households; the behaviour of consumers; the behaviour of firms; markets; the role of the state; public goods and commons; labour markets; capital markets; the macroeconomic flow; economic growth; international trade; nature and environmental externalities; poverty and wellbeing. Throughout, the book presents theoretical perspectives in which social structures, relatedness, uncertainty, and social norms provide key economic explanations, contrasting these with the idealized worldview of neoclassical economics. Economics After the Crisis is designed for a one-semester introductory course in economics, primarily at undergraduate but also at postgraduate level, and is suitable for students from a range of disciplines. It will be of particular relevance to those students with an interest in developing economies. <https://www.coursera.org/learn/economicsfromapluralistperspective>

Leading Issues in South African Microeconomics-Brian Dollery 1992-01-01

Behavioural Approaches to Corporate Governance-Cameron Elliott Gordon 2015-10-05 Corporate governance failures are all too frequent and their patterns and outcomes seem avoidably familiar. This book examines the findings of behavioural finance and economics that are most relevant to governance problems, and suggests potential solutions that are best suited to real-world practice and circumstance. There is a great deal of existing theory that claims to predict the causes and effects of poor governance, and provide solutions. However, the implementation of such measures seems to do little more than merely delay inevitable crises. This book develops a synthesis framework to examine the relative strengths and weaknesses of a behavioural versus deductive approach to understanding the failures of governance. It concludes with a discussion of how corporate governance theory may need to shift going forward, perhaps to include a 'heterodox' ecosystem of theoretical paradigms. This book will be of interest to students, researchers and practitioners concerned with corporate governance, economic theory and behavioural economics.

Dystopia and Economics-Charity-Joy Revere Acchiardo 2018-03-09 Government collapsing? Zombies hunting you down? Everyone you know killed by a global epidemic? Not to worry! Economics holds the keys to survival. Often known as "the dismal science", it is particularly equipped to reveal order in what seems like chaos. Economists observe human behaviour: what leads us to take action, and the subsequent consequences. However, the choices made by individuals are not made in isolation; they influence and are influenced by the actions of others. A set of rules, even if unwritten, guides human behaviour. Foundational economic principles stand firmly in place, even when society is breaking down, and an understanding of these basic tenets of societies is essential to surviving the end of the world as we know it. In this book, the authors draw from popular culture to show economic principles at work in the dystopian societies depicted in The Walking Dead, Mad Max: Fury Road, The Hunger Games, Divergent, A Clockwork Orange, and Last Man on Earth. In each society, its members face resource and social constraints that incentivize particular behaviours and lead to predictable outcomes. How does human behaviour change when resources are severely limited, the legal system breaks down, or individual freedom is stifled? The examples presented here shed an eerie light on the principles that guide our actions every day. Dystopia and Economics: A Guide to Surviving Everything from the Apocalypse to Zombies provides a user-friendly introduction to economics suitable for a general audience as well as devoted students of the discipline.

Economics-GREGORY N.. TAYLOR MANKIW (MARK P.) 2020-02-08 Now firmly established as one of the leading economics principles texts in the UK and Europe, this exciting, new fifth edition of Economics by N. Gregory Mankiw (Harvard University) and Mark P. Taylor (Washington University), has been fully updated. Much revered for its friendly and accessible approach, emphasis on active learning, and unrivalled support resources, this edition also has an improved structure to ensure the text aligns even more closely with the latest courses. The new edition incorporates additional coverage of a number of key topics including heterodox theories in economics such as complexity theory; institutional economics and feminist economics; different theories in international trade; game theory; different measures of poverty; the 'flat Phillips curve'; and the future of the European Union. This title is available with MindTap, a flexible online learning solution that provides students with all the tools they need to succeed including an interactive eReader, engaging multimedia, practice questions, assessment materials, revision aids, and analytics to help you track their progress.

Spatonomy-Vít Pászto 2020 This open access book is based on "Spatonomy ? Spatial Exploration of Economic Data", an interdisciplinary and international project in the frame of ERASMUS+ funded by the European Union. The project aims to exchange interdisciplinary knowledge in the fields of economics and geomatics. For the newly introduced courses, interdisciplinary learning materials have been developed by a team of lecturers from four different universities in three countries. In a first study block, students were taught methods from the two main research fields. Afterwards, the knowledge gained had to be applied in a project. For this international project, teams were formed, consisting of one student from each university participating in the project. The achieved results were presented in a summer school a few months later. At this event, more methodological knowledge was imparted to prepare students for a final simulation game about spatial and economic decision making. In a broader sense, the chapters will present the methodological background of the project, give case studies and show how visualisation and the simulation game works.

Fundamental Principles of Law and Economics-Alan Devlin 2014-10-17 This textbook places the relationship between law and economics in its international context, explaining the fundamentals of this increasingly important area of teaching and research in an accessible and straightforward manner. In presenting the subject, Alan Devlin draws on the neoclassical tradition of economic analysis of law while also showcasing cutting-edge developments, such as the rise of behavioural economic theories of law. Key features of this innovative book include: case law, directives, regulations, and statistics from EU, UK, and US jurisdictions are presented clearly and contextualised for law students, showing how law and economics theory can be understood in practice; succinct end-of-chapter summaries highlight the essential points in each chapter to focus student learning; further reading is provided at the end of each chapter to guide independent research. Making use of tables and diagrams throughout to facilitate understanding, this text provides a comprehensive overview of law-and-economics that is ideal for those new to the subject and for use as a course text for law-and-economics modules.

From Evidence to Action-Food and Agriculture Organization of the United Nations 2018-10-18 Cash transfers have become a key social protection tool in developing countries and have expanded dramatically in the last two decades. However, the impacts of cash transfers programmes, especially in Sub-Saharan Africa, have not been substantially documented. This book presents a detailed overview of the impact evaluations of these programmes, carried out by the Transfer Project and FAO's From Protection to Production project. The 14 chapters include a review of eight country case studies: Kenya, Ghana, Ethiopia, Zambia, Zimbabwe, Lesotho, Malawi, South Africa, as well as a description of the innovative research methodologies, political economy issues and good practices to design cash transfer programmes. The key objective of the book is to enhance the understanding of these development programmes, how they lead to a broad range of social and productive impacts and also of the role of programme evaluation in the process of developing policies and implementing programmes.
