The Official Extreme Golf Manual-Andrew Gellatly 2005 Golfers often admit that the moment they grip a club in their hands, they lose all sense of rationality. For one thing, some golfers simply don't know when to stop playing--and you might see some of them trying to sink a putt on a busy city sidewalk. These golfers haven't gone totally insane; they've merely joined thousands like themselves who play the latest, coolest, variation on a famous old game. They're playing extreme golf. At last, aficionados of extreme golf have their very own how-to book: The Official Extreme Golf Manual. Here are ideas for playing a quick lunch-break round on the street outside the office . . . or on a ski slope during summer when it's too warm to ski . . . or on an ice pond when the regular golf course has closed for winter! Author Andrew Gellatly--with tongue only slightly in cheek--describes a variation called speed golf, gives advice on proper attire while playing extreme golf, and even offers information on participating in extreme golf competitions. Finally, he warns his readers about certain hazards often encountered by players of this unusual game, and devotes a full chapter titled First Aid for Extreme Golfers. Lovers of golf will love this book--even if they finally decide to stick with more orthodox versions of the game. Illustrations on most pages.

On Celestial Wings-Edgar D. Whitcomb 2005-01-01 In November 1940, 44 young military cadets graduated from the first Army Air Corps Navigational Class at Miami University in Coral Gables, Florida. The cadets came from all parts of the United States--from the urban areas of the East Coast, westward to the Appalachian Mountains, to the Midwest and prairie states, to the Rocky Mountains, and the West Coast. These young men came from the inner cities, the farmlands, the mountains, and coastal regions, and they were all volunteers. Most were college-educated and in the prime of life. World War II was raging in Europe and it was becoming increasingly difficult for the United States to remain neutral. A few farsighted men in our small Army Air Corps saw the essential requirement for trained celestial navigators in our military aircraft. The instructor for this navigational class was a 34-year-old high school dropout by the name of Charles J. Lunn. Charlie Lunn had first learned the art of celestial navigation aboard freighter ships in the Caribbean and later as the navigator aboard Pan American Airline planes flying to Europe and Asia. This book was

written by one of those young navigators, Edgar D. Whitcomb, from Hayden, Indiana. Ed Whitcomb tells about these young comrades-in-arms and draws vivid word portraits of them as we learn of their assignments to Air Corps units. We learn how they survived and how some died in World War II. We learn about Ed's own pre-Pearl Harbor assignment with the 19th Bombardment Group at Clark Field in the Philippines and the unfortunate, and perhaps inexcusable, decision not to deploy our B-17 Flying Fortress bombers immediately after the attack on Pearl Harbor resulting in the loss of 40 percent of those aircraft as they sat parked at Clark Field when the Japanese destroyed that vital military air base on the afternoon of 8 December 1941. The Mammoth Book Of Special Forces Training-Jon E. Lewis 2015-01-22 In this encyclopedic book, Lewis provides insights into the origins, training, tactics, weapons and achievements of special forces and special mission units throughout the world, focusing particularly on US and UK forces. He also looks at the codes that bind the members of these elite units together. He reveals training secrets in everything from wilderness survival to hand-to-hand combat. In doing so, he draws extensively on biographies, autobiographies, training manuals, interviews and press coverage of key operations. The elite forces covered include: The British Army's Special Air Service (SAS), established in 1950, which has served as a model for the special forces of many countries. Its counter-terrorist wing famously took part in the hostage rescue during the siege of the Iranian Embassy in London in 1980. The Parachute Regiment, the airborne infantry element of 16 Air Assault Brigade, which spearheads the British Army's rapid intervention capability. It is closely linked to United Kingdom Special Forces. The US Navy's SEALs (Sea, Air, Land Teams), trained to conduct special operations in any environment, but uniquely specialised and equipped to operate from and in the sea. Together with speedboat-operating Naval Special Warfare Combatant-Craft Crewmen, they form the operational arm of the Naval Special Warfare community, the Navy component of the US Special Operations Command. Their special operations include: neutralizing enemy forces; reconnaissance; counter-terrorism (famously in the killing of Osama bin Laden); and training allies. The US Army's Delta Force: The Special Mission Unit, 1st Special Forces Operational Detachment-Delta (1st SFOD-D), known simply as Delta Force, the Army component of Joint Special Operations Command. Its role is counter-terrorism, direct action and national intervention operations, though it has the capability to conduct many different kinds of clandestine missions, including hostage rescues and raids. The US Army Rangers, a light infantry combat formation under the US Army Special Operation Command. The Green Berets - motto: 'to free the oppressed' - trained in languages, culture, diplomacy, psychological warfare and disinformation. Russia's Spetsnaz, whose crack anti-terrorist commandos ended the Moscow theatre siege, and who have a reputation for being among the world's toughest and most ruthless soldiers. Spetsnaz units saw extensive action in Afghanistan and Chechnya, often operating far behind enemy lines. Israeli Special Forces, especially Shayetet 13 (Flotilla 13), whose motto, in common with the rest of the Israeli military, is 'Never again', a reference to the Holocaust. They are particularly adept at the specifically Israeli martial art Krav Maga, which they dub 'Jew-jitsu'.

The Signal Corps-Dulany Terrett 2015-07-03 The more mobile an armed force becomes, the more rugged the terrain it encounters, or the more widely the force is deployed, the greater becomes the difficulty of securing and maintaining rapid, completely linked communications. In the U.S. Army the Signal Corps is the agency charged with developing, procuring, and furnishing signal equipment to overcome the difficulties mentioned above. In an age of swift and startling progress in electronics, this phase of its mission demands that it keep abreast of scientific advances at home and abroad and maintain close ties with civilian laboratories and industry in order to take advantage of their capabilities. This volume traces the course which the Signal Corps followed between the first and second world wars, a period of planning and preparation. Others to follow will recount the testing of the Corps' organization and equipment, and the results achieved at home and overseas. The author has dealt with the subject on a chronological basis, instead of following the topical treatment used in other technical service volumes. This broad-front approach has enabled him to weave into one pattern the many activities in which the Signal Corps was simultaneously engaged. The reader can here follow from birth the history of Army radar and mobile radio, the first steps taken in the conversion of the civilian communications industry to war production, the expansion of training facilities, and the beginnings of the far-flung communications network that eventually encircled the globe. He will see the uncertainties of planning and the difficulties of organization incident to rapidly changing conditions, meager appropriations, and the clash of interest within the military household. These and many other matters showing human beings and institutions under pressure are replete with significance to us who must live in a turbulent world where revolution tends to have the upper hand over evolution.

Proceedings- 1988

Mosquitoes to Wolves-Gary Robert Lester 2002-02-01 Comparable to twentieth century cavalry, early forward air controllers (FAC) probed, observed, and reported enemy activity. Flying rickety, underpowered, and unarmed aircraft, they operated on the leading edge of ground combat. The efficient use of airborne FACs never developed in a meaningful way in World War II, with the possible exception of their use in Marine amphibious operations in the Pacific. But the rugged terrain of Korea and the jungle mazes of Vietnam restricted the capabilities of ground controllers to identify targets, thus expanding the need for "eyes in the air." FAC roles changed from those of probing, observing, and reporting, to those of locating targets, marking them for air strikes, and taking an active role in their destruction. This expanded mission resulted in the inevitable evolution of FAC equipment and responsibilities.

A Hard Way to Make an Easy Living-Corky Decker 2011-02-24 Its often been said that a bad day of fishing beats the best day at work. But what happens when fishing is your work? In A Hard Way to Make an Easy Living, author and career fisherman Corky Decker recaps his lifelong fishing adventures. From his start as a young boy intrigued by the sea working for tips on party sport fishing boats out of Ogunquit, Maine, to captaining a multimillion-dollar factory trawler that fished Alaskan waters, his stories of successes and failures provide an insiders look at the lives of men and women who go to sea to fish. The story demonstrates why commercial fishing is not just a job, but a way of life. In this memoir, Decker tells of trawling and harpooning bluefin tuna on the East Coast until the lure of Alaska found him walking the docks of Kodiak in 1985; he recounts his experiences of the fisheries he worked in Alaska. A Hard Way to Make an Easy Living underscores the continual controversy between the fishing industry and fisheries management and the influence of foreigners in US waters.

Compass: A Story of Exploration and Innovation-Alan Gurney 2005-08-17 "The compass's rocky evolution is charted with an enthusiast's passion...A fascinating adventure." —Bernadette Murphy, Los Angeles Times This is the rich history of the most important navigational device of all time, the magnetic compass, born of the need for a reliable means of negotiating treacherous sea routes around the globe. Compass chronicles the misadventures of those who attempted to perfect the instrument—so precious to sixteenth-century seamen that, by law, any man found tampering with one had his hand pinned to the mast with a dagger. Part history, part adventure, this book is a compelling tribute to human ingenuity—and the mysteries of the sea.

Combat Search and Rescue in Desert Storm-Donald Whitcomb 2012-08-01 After Southeast Asia, analysts and force planners came to the realization that there was a fundamental difference between search and rescue (SAR) in a permissive area and in an area that was not permissive (i.e., under enemy control). This second condition is now called combat search and rescue or CSAR. At the time of Desert Storm, the two forms of rescue were defined thusly: Search and Rescue (SAR): Use of aircraft, surface craft, submarines, personnel, and equipment to locate and recover personnel in distress on land or at sea. Combat Search and Rescue (CSAR): A specialized SAR task performed by rescue-capable forces to effect recovery of distressed personnel from hostile territory during contingency operations or wartime.² The development of this rescue capability has been well established. Dr. Robert Futrell documented our efforts in Korea in The United States Air Force in Korea, 1950-1953. His work was followed by Dr. Earl Tilford's Search and Rescue in South east Asia, which eloquently chronicled the heroic efforts of the rescue crews in that conflict who brought back literally thousands of airmen. It extensively documented what is now considered the "golden age" of rescue. This work is meant to follow in those traditions and will focus on our CSAR efforts in the Persian Gulf War of 1991, or more specifically, the period of Operation Desert Storm, 17 January to 28 February 1991. Overall, CSAR in Desert Storm appears to have been a mixed bag. Because of advances in precision weaponry, Global Positioning System (GPS) technology, countermeasures, and training, relatively few coalition aircraft were shot down. Forty-three coalition aircraft were lost in combat, most over high-threat areas. Eighty-seven coalition airmen, soldiers, sailors, and marines were isolated in enemy or neutral territory. Of that total, 48 were killed, one is still listed as missing, 24 were immediately captured, and 14 were exposed in enemy territory. Of those who survived, most landed in areas controlled by enemy troops. Of the few actually rescueable, six were not rescued for a variety of reasons, but primarily because of limitations in CENTAF's ability to locate them accurately and in a timely manner.
