Graham Kelly 2008-09-01 As engineering systems become more increasingly interdisciplinary, knowledge of both mechanical and electrical systems has become an asset within the field of engineering. All engineers should have general facility with modeling of dynamic systems and determining their response and it is the objective of this book to provide a framework for that understanding. The study material is presented in four distinct parts; the mathematical modeling of

dynamic systems, the mathematical solution of the differential equations and integro differential equations obtained during the modeling process, the response of dynamic systems, and an introduction to feedback control systems and their analysis. An Appendix is provided with a short introduction to MATLAB as it is frequently used within the text as a computational tool, a programming tool, and a graphical tool. SIMULINK, a MATLAB based simulation and modeling tool, is discussed in chapters where the development of models use either the transfer function approach or the state-space method.

Health Promotion in the Workplace 4th Edition-Michael P. O'Donnell 2014-10-01 Health Promotion in the Workplace is a valued reference for anyone who designs, manages, evaluates or studies workplace health promotion programs. Authored by a team of program managers and scholars who have designed and managed programs in several thousand settings, conducted hundreds of program evaluations, and published thousands of scientific studies on the most effective approaches, this 722 page book provides the rare combination of practical perspective combined with conservative scientific rigor. This 4th edition is completely revised from the 3rd edition, which was published in 2002, and builds on the principles first articulated in 1984, in the 1st edition. The earlier editions have been used by tens of thousands of professionals around the world. The overall book is organized around the Awareness, Motivation, Skills and Opportunity (AMSO) Framework, which was first articulated by Dr. Michael P. O'Donnell in 2005. The AMSO Framework has been adopted by hundreds of employers, and integrated into federal legislation that guides federal spending in this area. This book is written with three audiences in mind. The largest audience is the rapidly growing network of professionals who have embraced health promotion as a career. Our hope for them is to provide the insights and tools they need to be as effective as possible in their work, and in turn improve the health and quality of life for millions of people every day. Another key group is human resource professionals who have not chosen health promotion as a career, but have been tasked with implementing programs in their own organizations. Our hope for them is to provide a tangible sense of how programs should work, so they know how to hire the best people to help them and how to monitor and oversee the successful rollout, evaluation, and evolution of a program. The most important audience may be students, most of whom are young people with open minds and passion, people who are still formulating career plans. Our hope is that this book opens their minds to a career path through which they can help individuals experience an enhanced health and sense of wellbeing, transform workplaces into communities that care for their workers while they improve productivity and moderate medical cost increases, all of which will help organizations remain financially sustainable and commercially successful. This text is appropriate for students in undergraduate and graduate level programs. The 23 chapters of the book are organized into six major sections. The three chapters devoted to The Health Promotion Concept, include the health perspective, the business case and the AMSO Framework. The four chapters in on Management cover how to design, manage, evaluate, and market a program. The five chapters on Core Theories describe the behavior change theories most important for health promotion: goal setting, Transtheoretical Model, incentives, self efficacy, and tailoring. The eight chapters on Building Skills address health assessment, fitness, nutrition, stress management, weight control, tobacco control, decision support and EAP. The two chapters on Enhancing Opportunities discuss the impact of social relationships on organization culture. The final chapter is on special challenges in small business settings, the untapped frontier for workplace health promotion.
