No crystal ball is required to safely predict, that in the future - even more than in the past - mastered innovativeness will be a primary criterion distinguishing successful from unsuccessful companies. At the latest since Michael Porter's study on the competitiveness of nations, the same criterion holds even for the evaluation of entire countries and national economies. Despite the innumerable number of publications and recommendations on innovation, competitive innovativeness is still a rare competency. The latest publication of UNICE - the European Industry - ganization representing 20 million large, midsize and small companies - speaks a clear language: Europe qualifies to roughly 60% (70%) of the innovation strength of the US (Japan). The record unemployment in many EU countries does not contradict this message. A main reason may be given by the fact that becoming an innovative organization means increased openness towards the new and more tolerance towards risks and failures, both challenging the inherently difficult management art of cultural change. Further, lacking innovativeness is often related to legal and fiscal barriers which rather hinder than foster innovative activities. Yet another reason to explain Europe's notorious innovation gap refers to insufficient financial R&D resources on the company as well as on the national level. As a result, for example, high-ranking decisions on the level of the European Commission are taken to increase R&D expenditures in the European Union from roughly 2% to 3% of GNP.</div> <div>The Bios Companion-Phil Croucher 2001 This text describes the functions that the BIOS controls and how these relate to the hardware in a PC. G. Krugovich 2016-08-25 This book presents the physico-technical basis and current state of the technology of boronized layers. Special attention is given to the layer structure and morphology of allocated phases and distributions in a superficial zone of chemical compounds. Two- and multi-component phases of alloys and diffusion processes in a self-organizing mode are discussed. Surface hardening by boronizing increases the life time of mechanical tools. This is important for the mining industry, agriculture, textile and chemical industry. The book is important for thermochemical treatment and surface hardening of metals and alloys.</div> <div>The PC Engineer's Reference Book-Phil Croucher 1996</div> <div>Advances in Medicine and Biology-Leon V. Berhardt 2018-11-16 In the opening chapter of Advances in Medicine and Biology, Volume 135, the authors propose that to correctly interpret the results of procalcitonin accuracy studies for the diagnosis of neonatal sepsis, we must analyze the methods we use to measure procalcitonin performance. Trypanosoma cruzi is a flagellated protozoan that causes Chagas disease, also known as America Trypanosomiasis. The authors discuss techniques for diagnosis, including parasitological methods based on microscopy, xenodiagnoses and microscopic examination of fresh anticoagulated blood or buffy coat. The collection goes on to discuss rhabdomyolysis, a clinical syndrome caused by injury to skeletal muscle fibres with the release of their breakdown products, especially myoglobin, into the circulation. The condition is associated with traumatic injury, crush syndrome, extreme exercise, drugs, toxins and malignant hyperthermia among other things. In the next review, the authors intend to aid our understanding of lipid metabolism and provide a rational basis for future research in drug development by analysing current data related to the role of mutual regulation between hormone-sensitive lipase and insulin, discussing unanswered questions in different lines of studies. Following this, one study aims increase the activity of high-molecular-weight heparin through the development of a new high active heparin complex with glutamate. The thermodynamic simulation of chemical equilibria based on pH data and the molecular dynamics simulation were used. Later, the structure of two human blood groups with both AB active glycoproteins (HOC 89 and Cyst 19) isolated from human ovarian cyst fluids are introduced. Their properties are characterized by interactions with mAbs against the human blood group (ABH), Lewis system, sialyl glycotopes and various applied lectins. This collection also reviews differential diagnostic considerations to consider when making a diagnosis of malignant peripheral nerve sheath tumors in the breast. Malignant peripheral nerve sheath tumors account for approximately 5% of all soft tissue sarcomas and are associated with neurofibromatosis type 1 and a prior history of radiation. They are aggressive tumors with a propensity to recur and to develop distant metastases. An analysis is provided concerning the literature regarding the clinicopathologic features of epithelioid malignant peripheral nerve sheath tumors. Particular attention is paid to how this variant may be differentiated from other diagnostic considerations and on the utility of molecular testing in the evaluation of these lesions. Finnish type congenital nephrotic syndrome, also known as type 1 nephrotic syndrome (NPHS1), OMIM 256300, is caused by mutations in the nephrin gene. These mutations cause a congenital glomerulonephritis, which is particularly frequent in Finland (incidence of 1:8200 newborns). Since immunosuppressive therapy does not induce clinical remission, the authors propose that the best method of treatment is a bilateral nephrectomy and kidney transplantation. In the subsequent chapter, the effect of advanced glycation end products on renal cell in diabetic nephropathy is discussed in respect to downstream alterations such as reactive oxygen species production, activation of nicotinamide adenine dinucleotide phosphate oxidase, nuclear factor-kappa B activation, synthesis of transforming growth factor-beta 1 and fibronectin leading to epithelial to mesenchymal transition. In the concluding chapter, the potential problem of quinoline yellow as food additive is introduced, followed by detailed description of the electrochemical methods of detection. Quinoline yellow is commonly applied as a food colorant, however it may cause allergy symptoms in those allergic to aspirin and lead to severer hyperactivity in children.</div> <div>Soft Actuators-Kinji Asaka 2019-08-28 This book is the second edition of Soft Actuators, originally published in 2014, with 12 chapters added to the first edition.
