Evaluation of Parenting Capacity in Child Protection-Karen S. Budd 2011-03-02 This book addresses evaluations for child protection, one of the most delicate legal arenas in which forensic mental examiners play a part. The evaluations are highly specialized, requiring child clinical specialization, a knowledge of the legal and social context, and a thorough understanding of the professional and ethical guidelines for child protection evaluations. This volume provides that context, and presents established empirical foundations from the behavioral, social, and medical sciences. Finally, the book provides a detailed "how-to" for practitioners, including information on data collection, interpretation, report writing and expert testimony.

Cisco CCNA in 60 Days-Paul William Browning 2014-03-01 The Cisco CCNA is one of the most widely recognised and respected qualifications in the IT industry. Every year, tens of thousands of people embark towards taking the exam via private study, Cisco Academy courses, or online training. The sad truth is most students quit along the way, and for those few who actually do attempt it, only 50% pass. All that time, effort, and money wasted! If there are so many manuals, CBT courses, lab simulators, exam engines, and study resources out there, then what goes wrong? This is the question Cisco trainer Paul Browning wanted to get to the bottom of. After interviewing thousands of students, he discovered that most people quit because they are simply overwhelmed with the sheer volume of material they need to digest and, of course, the large number of hands-on skills they need to be able to demonstrate in the exam. Add to that the day-to-day stresses of commuting to work, bringing up a family, and the distraction of everyday problems and challenges; it's no wonder people quit. This is where Cisco CCNA in 60 Days can help. Devised by two industry experts and countless Cisco students just like you, the 60-day programme breaks down every exam requirement into a daily study task. All you need to do is open the book at the relevant day (from 1 to 60), read the theory, and complete the lab. Every lesson is reviewed several times in the form of exam questions, review sessions, a handy exam cram guide, and, of course, hands-on labs for you to follow. You can choose to take the CCENT after the first 30 days and the ICND2 after the next 30 days, or you can take the CCNA after 60 days of study. Here is what is included in your study guide: 60 daily study tasks Full explanations of theory Real-world tips and advice Over 47 hands-on labs, plus 15 bonus CCENT and ICND2 labs CCENT and ICND2 cram guides Bonus VLSM guide Motivational goal-setting guide Downloadable videos Free support via [www.in60days.com](http://www.in60days.com) Author Paul Browning is a former police officer who used his CCNA qualification to help him make a career change to IT. He worked for Cisco in the UK for a while, and then went on to start his own Cisco training company, which he ran for 8 years before moving into online Cisco training. He is the author of several Cisco study guides. He has also created the online Cisco certification training sites, including [www.howtonetwork.net](http://www.howtonetwork.net) and [www.in60days.com](http://www.in60days.com) Technical author Farai Tafa used to work in a shoe shop but decided he wanted more out of life, so he began to study for his Cisco exams. He is now a dual CCIE and one of the leading Cisco consultants in the US. He currently designs, installs, and troubleshoots networks for large companies. Author Daniel Gheorghe is a CCIE in Routing and Switching. He is currently preparing for his second CCIE certification (in Security) and he is developing his skills in system penetration testing. He also holds numerous certifications in networking and security, from Cisco and other vendors, including CCNA, CCDA, CCNA Security, CCNP, CCDP, CCIP, FCNSA, FCNSP, and CEH. He took an interest in IT at an early age and soon developed a passion for computer networking, which made him study hard in order to reach an expert level. Technical author Dario Barinic is a network expert (dual CCIE #25071 - Routing and Switching, and Service Provider) with a Master of Engineering degree and eight years of experience in the networking field. He also holds other certifications, such as Cisco CCNA and CCNP, HP AIS, ASE, MASE, and various Cisco specialisations. Dario is specialised in the area of routing and switching (designing, implementing, troubleshooting, and operating service provider and large enterprise WAN and LAN networks).

The Merit Myth-Anthony P. Carnevale 2020-05-26 An eye-opening and timely look at how colleges drive the very inequalities they are meant to remedy, complete with a call—and a vision—for change Colleges fiercely defend America's deeply stratified higher education system, arguing that the most exclusive schools reward the brightest kids who have worked hard to get there. But it doesn't actually work this way. As the recent college-admissions bribery scandal demonstrates, social inequalities and colleges' pursuit of wealth and prestige stack the deck in favor of the children of privilege. For education scholar and critic Anthony P. Carnevale, it's clear that colleges are not the places of aspiration and equal opportunity they claim to be. The Merit Myth calls out our elite colleges for what they are: institutions that pay lip service to social mobility and meritocracy, while offering little of either. Through policies that exacerbate inequality, including generously funding so-called merit-based aid for already-wealthy students rather than expanding opportunity for those who need it most, U.S. universities—the presumed pathway to a better financial future—are woefully complicit in reproducing the racial and class privilege across generations that they pretend to abhor. This timely and incisive book argues for unrigging the game by dramatically reducing the weight of the SAT/ACT; measuring colleges by their outcomes, not their inputs; designing affirmative action plans that take into consideration both race and class; and making 14 the new 12—guaranteeing every American a public K-14 education. The Merit Myth shows the way for higher education to become the beacon of opportunity it was intended to be.

A Leader's Guide to Competency-Based Education-Laurie Dodge 2018-09-30 As interest in competency-based education (CBE) continues to grow by leaps and bounds, the need for a practical resource to guide development of high-quality CBE programs led the authors to write this book. Until now, there has been no how-to manual that captures in one place a big picture view of CBE along with the down-to-earth means for building a CBE program. A variety of pressures are driving the growth in CBE, including the need for alternatives to the current model of higher education (with its dismal completion rates); the potential to better manage the iron triangle of costs, access, and quality; the need for graduates to be better prepared for the workforce; and the demands of adult learners for programs with the flexible time and personalized learning that CBE offers. Designed to help institutional leaders become more competent in designing, building, and scaling high-quality competency-based education (CBE) programs, this book provides context, guidelines, and process. The process is based on ten design elements that emerged from research funded by the Gates Foundation, and sponsored by AAC&U, ACE, EDUCAUSE, and the Competency-Based Education Network (C-BEN), with thought partners CAEL and Quality Matters. In short, the book will serve administrators, higher education leaders, faculty, staff, and others who have an interest in CBE by:

- Giving context to enable the audience to discover the importance of each design element and to help frame the CBE program (the "why");
- Providing models, checklists, and considerations to determine the "what" component for each design element;
- Sharing outlines and templates for the design elements to enable institutions to build quality, relevant, and rigorous CBE programs (the "how").
