He steps back into the mud of boxing, coaching two troubled teens who dreamas he once didof becoming Golden Gloves champions.His compelling story moves far beyond the grunt and sweat of the local gym. It explores the classrooms of a suburban high school and digs through the remains of unhappy childhoods. The Two Faces of Islam-Stephen Schwartz 2003-09-09 Since its formation in 1932, Saudi Arabia has been ruled by two interdependent families. The Al Sa'uds control politics and the descendants of Ibn Abd al-Wahhab impose Wahhabism—a violent, fanatical perversion of the pluralistic Islam practiced by most Muslims. Stephen Schwartz argues that Wahhabism, vigorously exported with the help of Saudi oil money, is what incites Palestinian suicide bombers, Osama bin Laden, and other Islamic terrorists throughout the world. Schwartz reveals the hypocrisy of the Saudi regime, whose moderate facade conceals state-sponsored repression and terrorism. He also raises troubling questions about Wahhabi infiltration of America's Islamic community and about U.S. oil companies sanitizing Saudi Arabia's image for the West. This sharp analysis and eye-opening expose illuminates the background to the September 11th terrorist attacks and offers new approaches for U.S. policy toward its closest ally in the Middle East.

Emerging Therapeutic Ultrasound-Junru Wu 2006 While perturbative QCD methods fully describe experimental results at high energies, and chiral perturbation theory is the low energy effective theory of the strong interactions, a form of duality is observed connecting these two regimes. In these intermediate kinematics, a wide variety of reactions are observed which can be described simultaneously by single particle (quark) scattering, and by exclusive resonance (hadron) scattering. The contributions in this proceedings volume discuss recent and existing results, and aim to foster current and future research, investigating the phenomenon of quark?hadron duality. This unique volume contains research work by scientists from different arenas of hadronic physics, dealing with different manifestations of quark?hadron duality.

Solar Labyrinth-Robert Borski 2004-05-20 Gene Wolfe's BOOK OF THE NEW SUN has been hailed by both critics and readers as quite possibly the best science fiction novel ever written. And yet at the same time, like another masterpiece of fiction, James Joyce's Ulysses, it's been deemed endlessly complex and filled with impenetrable mysteries. Now, however, in the first book-length investigation of Wolfe's literary puzzlebox, Robert Borski takes you inside the twisting corridors of the tetralogy and along the way reveals his solutions to many of the novel's conundrums and riddles, such as who really is Severian's lost twin sister (almost certainly not who you think) and why he believes the novel's main character may not even be the torturer Severian. Furthermore, and in essay after essay, Borski demonstrates how a single master key will unlock many of the book's secret relationships-all in the attempt to guide you through the labyrinth that is Gene Wolfe's BOOK OF THE NEW SUN.

The DARPA Urban Challenge-Martin Buehler 2009-11-26 By the dawn of the new millennium, robotics has undergone a major transformation in scope and dimensions. This expansion has been brought about by the maturity of the field and the advances in its related technologies. From a largely dominant industrial focus, robotics has been rapidly expanding into the challenges of the human world. The new generation of robots is expected to safely and dependably co-habitat with humans in homes, workplaces, and communities, providing support in services, entertainment, education, healthcare, manufacturing, and assistance. Beyond its impact on physical robots, the body of knowledge robotics has produced is revealing a much wider range of applications reaching across diverse research areas and scientific disciplines, such as: biomechanics, haptics, neurosciences, virtual simulation, animation, surgery, and sensor networks among others. In return, the challenges of the new emerging areas are proving an abundant source of stimulation and insights for the field of robotics. It is indeed at the intersection of disciplines that the most striking advances happen. The goal of the series of Springer Tracts in Advanced Robotics (STAR) is to bring, in a timely fashion, the latest advances and developments in robotics on the basis of their significance and quality. It is our hope that the wider dissemination of research developments will stimulate more exchanges and collaborations among the research community and contribute to further advancement of this rapidly growing field.

In Time O' Strife-Joe Corrie 2013-12-16 There's nae power on earth can crush the men who can sing on a day like this. A powerful re-imagining of Joe Corrie's neglected classic about a Fife mining community during the General Strike. To raise funds for the soup kitchens feeding the miners and their starving families, Corrie wrote In Time O' Strife in 1926 whilst on strike himself, exposing the brutal lives of a family staring hunger and defeat in the face. Some 87 years later, Graham McLaren has adapted, designed and directed this rarely performed classic play. Created by Graham McLaren (Men Should Weep, A Christmas Carol), the production uses fragments of Corrie's other plays, poems and songs, celebrating his ability as a writer and his contribution to Scottish culture. This edition pairs Corrie's original text with the script created by McLaren's adaptation process.

In these pages Sara Avant Stover shows how simple, natural, and refreshingly fun practices can put women back in sync with their own cycles and those of nature. When we honor spring's seedlings, summer's color, fall's harvest, and winter's quietude, we harmonize our inner and outer worlds.
