Perspectives on Patentable Subject Matter-Michael B. Abramowicz 2014-11-28 Perspectives on Patentable Subject Matter brings together leading scholars to offer diverse perspectives on one of the most pressing issues in patent law: the basic question about which types of subject matter are even eligible for patent protection, setting aside the widely known requirement that a claimed invention avoid the prior art and be adequately disclosed. Some leading commentators and policy-making bodies and individuals envision patentable subject matter to include anything under the sun made by humans, whereas other leaders envision a range of restrictions for particular fields of endeavor, from business methods and computer software to matters involving life, such as DNA and methods for screening or treating disease. Employing approaches that are both theoretically rigorous and grounded in the real world, this book is well suited for practicing lawyers, managers, lawmakers, and analysts, as well as academics conducting research or teaching a range of courses in law schools, business schools, public policy schools, and in economics and political science departments, at either the undergraduate or graduate level.

Patent Law in Global Perspective-Ruth L. Okediji 2014 This text addresses critical and timely questions in patent law from a truly global perspective, with contributions from leading patent law scholars from various countries and various disciplines. The rich scholarship featured reflects on a wide range of perspectives, offering insights and new approaches to evaluating key institutional, economic, doctrinal, and practical issues that are at the forefront of efforts to reform the global patent system, and to reconfigure geo-political interests in on-going multilateral, trilateral, and bilateral initiatives.

Perspectives on Properties of the Human Genome Project-F. Scott Kieff 2003-12-31 The groundbreaking work of modern genetics that culminated in the Human Genome Project has blazed new pathways in both science and law. As the assertion of property rights generally, and patents in particular, has become increasingly common surrounding the new products and processes of modern biotechnology, the transactions that must occur for downstream research and development to occur have shifted in important ways, in both academic and business settings. Perspectives on Properties of the Human Genome Project addresses the problems raised in this complex area under different regimes of laws and norms to offer hope and help as we wrestle to ensure optimal use of such essential innovations. This unique collection of authors, views, and topics is essential reading for academics, policy-makers, and practitioners in medicine, biology, sociology, management, ethics, law, and economics, and anyone else interested in gaining perspective on the broad interface between biotechnology and property. "This is a gem of a book... [by] a veritable 'who's who' of important contributors to this field.. An interested reader could not ask for a better overview and compendium of serious, thoughtful analysis of this important topic." - Professor Robert P. Merges, University of California at Berkeley School of Law "Kieff's timely and masterful book establishes a modern truth: to translate a scientific discovery into tangible patient benefits requires an intellectual property lawyer. [It] should be read not only by legal scholars but also scientists and the

general public." - Dr. Mark Siegler, University of Chicago Pritzker School of Medicine

Patentability Requirements for Nanotechnological Inventions-Mario Cisneros 2009 Nanotechnology has experienced an accelerated development during the last 20 years. The newness of the topic - combined with the high potential of the technology in terms of capacity to impact people's lives and the business universe expected to be generated - has produced extensive discussions and controversy, inviting debate on the social, economic, ethical, and legal aspects of nanotechnology, as well as its development, implementation, and use. The economic benefit that is promised to the owners - or those controlling the knowledge and inventions around nanotechnology - has encouraged them to follow aggressive strategies with the intention of obtaining exclusive benefits by the legal appropriation of those developments. This legal appropriation is partially pursued by the filing of patent applications. This LL.M. thesis analyzes such strategies, particularly the way in which applicants are trying to get broad protection of their inventions and the impact this may generate on the possibility of promoting further development of the technology by universities and other companies. LL.M. Thesis.

Understanding Sales, Leases, and Licenses in a Global Perspective-Michael Rustad 2008 "Understanding Sales, Leases, and Licenses in a Global Perspective is a comprehensive and accessible guide to the rapidly evolving law of sales, leases, and licenses in a global setting. Each chapter combines practical examples and explanations with ten or more practice questions to help students master the law as they proceed through the book. The practice questions are an invaluable tool for study for class preparations as well as the final examination. With a perfect balance between legal doctrine and practical application, each chapter compares and contrasts U.S. sales law with CISG and other international commercial law developments. While the primary emphasis of the book is a comparison of UCC Article 2 with CISG, the book also has extensive coverage of the leases of goods and the licensing of software with international practice pointers. The book is appropriate for a text in sales and leases courses as well as courses in international contract law and comparative commercial law."--BOOK JACKET.
