Introduction to Law-Jaap Hage 2017-09-09 This book is exceptional in the sense that it provides an introduction to law in general rather than the law of one specific jurisdiction, and it presents a unique way of looking at legal education. It is crucial for lawyers to be aware of the different ways in which societal problems can be solved and to be able to discuss the advantages and disadvantages of different legal solutions. In this respect, being a lawyer involves being able to reason like a lawyer, even more than having detailed knowledge of particular sets of rules. Introduction to Law reflects this view by focusing on the functions of rules and on ways of arguing the relative qualities of alternative legal solutions. Where 'positive' law is discussed, the emphasis is on the legal questions that must be addressed by a field of law and on the different solutions which have been adopted by, for instance, the common law and civil law tradition. The law of specific jurisdictions is discussed to illustrate possible answers to questions such as when the existence of a valid contract is assumed.

Beginner Teachers in South Africa-Fabian Arends 2009 "Beginner Teachers in South Africa is the first wide-scale study of teachers in the first three years of their careers and offers substantive evidence suggesting the need for interventions to support them. Based on research undertaken in five South African provinces selected because of their relatively high absorption of beginner teachers, it examines the perceptions of novice teachers about their own skills and competencies and conversely, the perceptions of school managers about their performance. Employing both quantitative and qualitative research methodologies, the study highlights the critical and supportive role the Department of Education needs to play, the importance of a multi-sectoral approach in improving conditions in schools, and the need for continued investigation into effective teaching. This support for beginner teachers is essential both in order to retain teachers and to develop good teaching practice that will result in successful learners"--Publisher description.

Struggles for Equity in Education-Mel Ainscow 2015-07-16 In the World Library of Educationalists series, international experts compile career-long collections of what they judge to be their finest pieces - extracts from books, key articles, salient research findings, major theoretical and practical contributions - so the world can read them in a single manageable volume. Readers will be able to follow the themes and strands and see how their work contributes to the development of the field. Spanning Mel Ainscow's accomplished 30 year international career in education, the texts in this book trace his efforts to find ways of fostering more equitable forms of education. This has involved a series of struggles as he has experimented with different approaches - in a variety of contexts - to find new possibilities for responding to learner diversity. Over the years this has related to a variety of headline themes, starting from special education, through to integration, on to inclusive education, and then, more recently, educational equity. The readings have been chosen to illustrate the changes that have occurred in Ainscow's thinking and practices and a short introduction is provided for each chapter that is intended to help readers to understand the significance of what is presented and how this relates to other chapters in the book. The writings in this text reinforce the idea that the promotion of equity in schools is essentially a social process that has to occur within particular contexts.

What Is Contemporary Art?-Terry Smith 2012-08-10 Who gets to say what counts as contemporary art? Artists, critics, curators, gallerists, auctioneers, collectors, or the public? Revealing how all of these groups have shaped today's multifaceted definition, Terry Smith brilliantly shows that an historical approach offers the best answer to the question: What is Contemporary Art? Smith argues that the most recognizable kind is characterized by a return to mainstream modernism in the work of such artists as Richard Serra and Gerhard Richter, as well as the retro-sensationalism of figures like Damien Hirst and Takashi Murakami. At the same time, Smith reveals, postcolonial artists are engaged in a different kind of practice: one that builds on local concerns and tackles questions of identity, history, and globalization. A younger generation embodies yet a third approach to contemporaneity by investigating time, place, mediation, and ethics through small-scale, closely connective art making. Inviting readers into these diverse yet overlapping art worlds, Smith offers a behind-the-scenes introduction to the institutions, the personalities, the biennials, and of course the works that together are defining the contemporary. The resulting map of where art is now illuminates not only where it has been but also where it is going.

Organizational Behavior-Fred Luthans 2015-06-01 Our goal with this 13th Edition is to keep this first mainline organizational behavior text up to date with the latest and relevant theory building, basic and applied research, and the best practice applications. We give special recognition of this scientific foundation by our subtitle *An Evidence-Based Approach*. As emphasized in the introductory chapter, the time has come to help narrow the theory/research—effective application/practice gap. This has been the mission from the beginning of this text. As “hard evidence” for this theory/research based text, we can say unequivocally that no other organizational behavior text has close to the number of footnote references. For example, whereas a few texts may have up to 40 or even 50 references for a few chapters, all the chapters of this text average more than twice that amount. This edition continues the tradition by incorporating recent breakthrough research to provide and add to the evidence on the theories and techniques presented throughout. Two distinguishing features that no other organizational behavior textbook can claim are the following: 1) We are committed at this stage of development of the field of OB to a comprehensive theoretical framework to structure our text. Instead of the typical potpourri of chapters and topics, there is now the opportunity to have a sound conceptual framework to present our now credible (evidence-based) body of knowledge. We use the widely recognized, very comprehensive social cognitive theory to structure this text. We present the background and theory building of this framework in the introductory chapter and also provide a specific model (Figure 1.5) that fits in all 14 chapters. Importantly, the logic of this conceptual framework requires two chapters not found in other texts and the rearrangement and combination of several others. For example, in the opening organizational context part there is Chapter 4, “Reward Systems,” and in the cognitive processes second part, Chapter 7, “Positive Organizational Behavior and Psychological Capital,” that no other text contains. 2) The second unique feature reflects our continuing basic research program over the years. Chapter 7 contains our most recent work on what we have termed “Positive Organizational Behavior” and “Psychological Capital” (or PsyCap). [The three of us introduced the term “Psychological Capital” in our joint article in 2004]. To meet the inclusion criteria (positive; theory and research based; valid measurement; open to development; and manage for performance improvement), for the first time the topics of optimism, hope, happiness/subjective wellbeing, resiliency, emotional intelligence, self-efficacy, and our overall core construct of psychological capital have been given chapter status. Just as real world management can no longer afford to evolve slowly, neither can the academic side of the field. With the uncertain, very turbulent environment most organizations face today, drastically new ideas, approaches, and techniques are needed both in the practice of management and in the way we study and apply the field of organizational behavior. This text mirrors these needed changes. *Social Cognitive Conceptual Framework*. The book contains 14 chapters in four major parts. Social cognitive theory explains organizational behavior in terms of both environmental, contextual events and internal cognitive factors, as well as the dynamics and outcomes of the organizational behavior itself. Thus, Part One provides the evidence-based and organizational context for the study and application of organizational behavior.

The Dream House-Craig Higginson 2016-04 A farmhouse is being reproduced a dozen times, with slight variations, throughout a valley. Three small graves have been dug in the front garden, the middle one lying empty. A woman in a wheelchair sorts through boxes while her husband clammers around the old demolished buildings, wondering where the animals have gone. A young woman - called 'the barren one' behind her back - dreams of love, while an ageing headmaster contemplates the end of his life. At the entrance to the long dirt driveway, a car appears and pauses - pointed towards the house like a silver bullet, ticking with heat. So begins The Dream House, Craig Higginson's riveting and unforgettable novel set in the Midlands of KwaZulu-Natal. Written with dark wit, a stark poetic style and extraordinary tenderness, this is a story about the state of a nation and a deep meditation on memory, ageing, meaning, family, love and loss. This updated 2016 edition contains new content, with Craig Higginson exploring the background to The Dream House, his varied experiences in a farmhouse in KwaZulu-Natal and the subsequent and poignant motivations for this moving novel.

Business Ethics at Work-Elizabeth Vallance 1995-07-20 This book looks at business ethics from the perspective of the business practitioner, but with the rigour of the moral philosopher. Intended for introductory students of business, commerce and management studies, Business Ethics at Work begins by setting business clearly in the context of creating value for its owners, and develops a practical ethical decision model which can be simply and relevantly applied to the hard moral choices with which business people are faced day to day. Against this background, some of the major ethical issues which arise in business are explored, for example, in human resource management, finance, marketing and advertising, the management of the environment and corporate governance. In conclusion the book looks at the nature of ethical audit and argues that for the business of the future, the identification of its ethical values and their integration into its policies and practices will be a crucial ingredient of success.

Low-Temperature Thermochemistry:-Peter W. Reiners 2018-12-17 Volume 58 of Reviews in Mineralogy and Geochemistry presents 22 chapters covering many of the important modern aspects of thermochemistry. The coverage of the chapters ranges widely, including historical perspective, analytical techniques, kinetics and calibrations, modeling approaches, and interpretational methods. In general, the

chapters focus on intermediate- to low-temperature thermochronometry, though some chapters cover higher temperature methods such as monazite U/Pb closure profiles, and the same theory and approaches used in low-temperature thermochronometry are generally applicable to higher temperature systems. The widely used low- to medium-temperature thermochronometric systems are reviewed in detail in these chapters, but while there are numerous chapters reviewing various aspects of the apatite (U-Th)/He system, there is no chapter singularly devoted to it, partly because of several previous reviews recently published on this topic.

Environmental Engineering IV-Artur Pawlowski 2013-05-21 Environmental engineering has a leading role in the elimination of ecological threats, and deals, in brief, with securing technically the conditions which create a safe environment for mankind to live in. Due to its interdisciplinary character it can deal with a wide range of technical and technological problems. Since environmental engineering uses the knowledge of the basic sciences - biology, chemistry, biochemistry and physics - it is able to neutralise pollution in all the elements of the environment, i.e. the hydrosphere, atmosphere and lithosphere. Moreover, environmental engineering deals with the design and maintenance of systems of water supply, sewage disposal, heating, ventilation and air-conditioning in buildings. Environmental Engineering IV contains 77 peer reviewed papers selected from 527 presented at the 4th Congress of Environmental Engineering (Lublin, Poland, 2-5 September 2012). The contributions are divided into 7 chapters: • Water supply • Water and wastewater treatment • Neutralization of solid wastes and sludge • Air protection and quality • Indoor microclimate • Energy • Biology and technology Environmental Engineering IV assesses the state of scientific research in various areas of environmental engineering, evaluates the organizational, technical and technological progress made in contributing to ecological security, and determines the place of environmental engineering in sustainable development, taking into account current political and economic conditions, and is a valuable source of information for the environmental engineering professional and academic community.
