Start-Ups and SMEs: Concepts, Methodologies, Tools, and Applications-Management Association, Information Resources
2020-01-03 Smaller companies are abundant in the business realm and outnumber large companies by a wide margin. To maintain a competitive edge against other businesses, companies must ensure the most effective strategies and procedures are in place. This is particularly critical in smaller business environments that have fewer resources. Start-Ups and SMEs: Concepts, Methodologies, Tools, and Applications is a vital reference source that examines the strategies and concepts that will assist small and medium-sized enterprises to achieve competitiveness. It also explores the latest advances and developments for creating a system of shared values and beliefs in small business environments. Highlighting a range of topics such as entrepreneurship, innovative behavior, and

organizational sustainability, this multi-volume book is ideally designed for entrepreneurs, business managers, executives, managing directors, academicians, business professionals, researchers, and graduate-level students.

Small and Medium Business Improvement in the ASEAN Region-Kenneth James 1986-12-01 The identification of small and medium businesses (SMBs) as a target for development policy is a comparatively recent phenomenon. It is clearly linked to the realization in developing countries that large capital-intensive industries which formed the basis of earlier development policies had failed to provide the hoped-for engine of growth. Only in the 1970s, as planners realized the mismatch between Western large-scale technology and local factor endowments, and as urban unemployment became an increasingly pressing problem, did attention turn to smaller scale and more labour intensive enterprises to provide possible solutions.

Capital Budgeting Valuation-H. Kent Baker 2011-05-04 An essential guide to valuation techniques and financial analysis With the collapse of the economy and financial systems, many institutions are reevaluating what they are willing to spend money on. Project valuation is key to both cost effectiveness measures and shareholder value. The purpose of this book is to provide a comprehensive examination of critical capital budgeting topics. Coverage extends from discussing basic concepts, principles, and techniques to their application to increasingly complex, real-world situations. Throughout, the book emphasizes how financially sound capital budgeting facilitates the process of value creation and

discusses why various theories make sense and how firms can use them to solve problems and create wealth. Offers a strategic focus on the application of various techniques and approaches related to a firm's overall strategy Provides coverage of international topics based on the premise that managers should view business from a global perspective Emphasizes the importance of using real options Comprised of contributed chapters from both experienced professionals and academics, Capital Budgeting Valuation offers a variety of perspectives and a rich interplay of ideas related to this important financial discipline.

India's Investment Climate-Aurora Ferrari 2009-01-01 The Indian economy has emerged as one of the world's fastest growing economies in the past few years. Greater investment, increased productivity, and deeper integration in the world economy have been the key growth drivers. Nonetheless, three main challenges remain: insufficient job creation in the formal sector; large and growing disparities between states; and increasing, but still low, productivity. India's Investment Climate identifies what the government can do to tackle these challenges by improving the investment climate for three key sectors, manufacturing, retail and software-ITES. Th.

Investment in Fixed and Working Capital During Early Industrialization-Kenneth Lee Sokoloff 1984 This paper utilizes a survey of the US manufacturing firms from 1832 to investigate the structure of manufacturing investment during early industrialization. Although several manufacturing industries, such as cotton textiles, depart from the pattern, most appear to have devoted the hulk of their investments to working capital. This variation across industries in the composition of capital investments is indicative of a more general variation in factor intensities, and bears on the issues of why industries became

concentrated in the regions they did, and the degrees to which they were adversely affected by the limited availability of long-term loans. Evidence that most manufacturing industries had quite modest investments in machinery and tools per unit of labor is also presented, serving to undercut the notion that the early period of industrialization was based on a proliferation of new, machinery-intensive technologies.

Measuring Social Capital-Christiaan Grootaert 2003 The concept of social capital has become increasingly prominent in both the theoretical and applied social science literature over the last decade. This publication seeks to provide a set of empirical tools to measure social capital, focusing on its application in developing countries. The methodology aims to generate quantitative data on various dimensions of social capital as part of a larger household survey (such as the Living Standards Measurement Survey or a household income/expenditure survey). The paper also provides detailed guidance for the use and analysis of the data.

Operating Hours and Working Times-Lei Delsen 2006-11-23 This book presents findings and results from the recent European Union Company survey of Operating hours, Working times and Employment (EUCOWE) in France, Germany, the Netherlands, Portugal, Spain and the United Kingdom. The EUCOWE-project is the first standardised company survey covering all sizes of firms and all sectors of the economy. It is the most comprehensive analysis yet published on Operating Hours, Capacity Utilisation, Working Times and Employment in the EU.

Civic Engagement and Social Cohesion-National Research Council
2014-10-07 People's bonds, associations and networks - as well as the civil, political, and institutional characteristics of the society in which they live - can be powerful drivers affecting the quality of life among a community's, a city's, or a nation's inhabitants and their ability to achieve both individual and societal goals. Civic engagement, social cohesion, and other dimensions of social capital affect social, economic and health outcomes for individuals and communities. Can these be measured, and can federal surveys

contribute toward this end? Can this information be collected elsewhere, and if so, how should it be collected? Civic Engagement and Social Cohesion identifies measurement approaches that can lead to improved understanding of civic engagement, social cohesion, and social capital - and their potential role in explaining the functioning of society. With the needs of data users in mind, this report examines conceptual frameworks developed in the literature to determine promising measures and measurement methods for informing public policy discourse. The report identifies working definitions of key terms; advises on the feasibility and specifications of indicators relevant to analyses of social, economic, and health domains; and assesses the strength of the evidence regarding the relationship between these indicators and observed trends in crime, employment, and resilience to shocks such as natural disasters. Civic Engagement and Social Cohesion weighs the relative merits of surveys, administrative records, and non-government data sources, and considers the appropriate role of the federal statistical system. This report makes recommendations to improve the measurement of civic health through population surveys conducted by the government and identifies priority areas for research, development, and implementation.
