The Art of Digital Marketing-Ian Dodson 2016-04-04 The premier guide to digital marketing that works, and a solid framework for success The Art of Digital Marketing is the comprehensive guide to cracking the digital marketing ‘code’, and reaching, engaging, and serving the empowered consumer. Based on the industry’s leading certification from the Digital Marketing Institute (DMI), this book presents an innovative methodology for successful digital marketing; start with the customer and work backwards. A campaign is only effective as it is reflective of the consumer’s wants, needs, preferences, and inclinations; the DMI framework provides structured, implementable, iterative direction for getting it right every time. The heart of the framework is a three-step process called the 3i Principles: Initiate, Iterate, and Integrate. This simple idea translates into higher engagement, real customer interaction, and multichannel campaigns that extend even into traditional marketing channels. The evolution of digital marketing isn’t really about the brands; it’s about consumers exercising more control over their choices. This book demonstrates how using this single realization as a starting point helps you build and implement more effective campaigns. Get inside the customer’s head with deep consumer research Constantly improve your campaigns based on feedback and interactions Integrate digital activities across channels, including traditional marketing Build campaigns based on customer choice and control Digital marketing turns traditional marketing models on their heads. Instead of telling the customer what to think, you find out what they already think and go from there. Instead of front-loading resources, you continually adjust your approach based on real interactions with real customers every day. Digital marketing operates within its own paradigm, and The Art of Digital Marketing opens the door for your next campaign.

Opening Government-John Wanna 2018-04-23 Transparency and citizen engagement remain essential to good government and sound public policy. Indeed, they may well be the key to restoring trust in government itself, currently at an all-time low in Australia. It is ironic, then, that this has occurred at a time when the technological potential for information dissemination and interaction has never been greater. Opening Government: Transparency and Engagement in the Information Age explores new horizons and scenarios for better governance in the context of the new information age, focusing on the potentials and pitfalls for governments (and governance more broadly) operating in the new, information-rich environment. Its contributors, a range of international and Australian governance academics and practitioners, ask what are the challenges to our governing traditions and practices in the new information age, and where can better outcomes be expected using future technologies. They explore the fundamental ambiguities extant in opening up government, with governments intending to become far more transparent in providing information and in information sharing, but also more motivated to engage with other data sources, data systems and social technologies.

Promoting and Marketing Events-Nigel Jackson 2013-10-28 This accessible book introduces students to the theories, concepts and skills required to promote an event successfully. To promote an event effectively it is essential to understand marketing, but it is also important to recognise that it is not just consumers who are the audience; other public who may not necessarily attend can have a fundamental effect on the success of an event as well. Uniquely therefore, this book covers two related themes: marketing and public relations in an events context. This will offer events planners a comprehensive guide on how to promote events to a range of audiences, and on how to use this to manage an event’s long-term reputation. The book focuses on core marketing and PR current theory specifically relevant to the events industry and introduces topics such as marketing strategy, the consumer, marketing PR and how to use the internet to promote events. It integrates a range of international case studies from small-scale events to mega-events to help show how theory can be applied in practice. It further includes inserts of interviews with practitioners in the field, to offer insight into the realities of event communication and to show how to overcome potential pitfalls. Learning outcomes, discussion questions and further reading suggestions are included to aid navigation throughout the book, spur critical thinking and further students’ knowledge. The book is essential reading for all students studying Events Management, and provides valuable reading for students, academics and practitioners interested in marketing and public relations in general.

European Handbook of Crowdsourced Geographic Information-Cristina Capineri 2016-08-25 This book focuses on the study of the remarkable new source of geographic information that has become available in the form of user-generated content accessible over the Internet through mobile and Web applications. The exploitation, integration and application of these sources, termed volunteered geographic information (VGI) or crowdsourced geographic information (CGI), offer scientists an unprecedented opportunity to conduct research on a variety of topics at multiple scales and for diversified objectives. The Handbook is organized in five parts, addressing the fundamental questions: What motivates citizens to provide such information in the public domain, and what factors govern/predict its validity? What methods might be used to validate such information? Can VGI be framed within the larger domain of sensor networks, in which inert and static sensors are replaced or combined by intelligent and mobile humans equipped with sensing devices? What limitations are imposed on VGI by differential access to broadband Internet, mobile phones, and other communication technologies, and by concerns over privacy? How do VGI and crowdsourcing enable innovation applications to benefit human society? Chapters examine how crowdsourcing techniques and methods, and the VGI phenomenon, have motivated a multidisciplinary research community to identify both fields of applications and quality criteria depending on the use of VGI. Besides harvesting tools and storage of these data, research has paid remarkable attention to these information resources, in an age when information and participation is one of the most important drivers of development. The collection opens questions and points to new research directions in addition to the findings that each of the authors demonstrates. Despite rapid progress in VGI research, this Handbook also shows that there are technical, social, political and methodological challenges that require further studies and research.

Transforming Global Information and Communication Markets-Peter F. Cowhey 2012-01-13 Innovation in information and communication technology (ICT) fuels the growth of the global economy. How ICT markets evolve depends on politics and policy, and since the 1950s periodic overhauls of ICT policy have transformed competition and innovation. For example, in the 1980s and the 1990s a revolution in communication policy (the introduction of sweeping competition) also transformed the information market. Today, the diffusion of Internet, wireless, and broadband technology, growing modularity in the design of technologies, distributed computing infrastructures, and rapidly changing business models signal another shift. This pathbreaking examination of ICT from a political economy perspective argues that continued rapid innovation and economic growth require new approaches in global governance that will reconcile diverse interests and enable competition to flourish. The authors (two of whom were architects of international ICT policy reforms in the 1990s) discuss this crucial turning point in both theoretical and practical terms.

People, Personal Data and the Built Environment-Holger Schnädelbach 2019-04-09 Personal data is increasingly important in our lives. We use personal data to quantify our behaviour, through health apps or for ‘personal branding’ and we are also increasingly forced to part with our data to access services. With the proliferation of embedded sensors, the built environment is playing a key role in this development of data, even though this remains relatively hidden. Buildings are sites for the capture of personal data. This data is used to adapt buildings to people’s behaviour, and increasingly, organisations use this data to understand how buildings are occupied and how communities develop within them. A whole host of technical, practical, social and ethical challenges emerge from this still developing area across interior, architectural and urban design, and many open questions remain. This book makes a contribution to this on-going discourse by bringing together a community of researchers interested in personal informatics and the design of interactive buildings and environments. The book’s aim is to foster critical discussion about the future role of personal data in interactions with the built environment. People, Personal Data and the Built Environment is ideal for researchers and practitioners interested in Architecture, Computer Science and Human Building Interaction.

A Star Is Bored-Byron Lane 2020-07-28 "A Star is Bored is an absolute knockout. Riotously funny and wickedly tender." — Taylor Jenkins Reid, New York Times bestselling author of Daisy Jones and the Six People Magazine Best Book of Summer 2020 - Named a Must-Read Summer book by Town & Country - Named One of the 14 Best Books of Summer 2020 by Harper’s Bazaar - One of Library Journal’s 2020 "Titles to Watch" - One of the 30 Best Beach Reads According to Parade Magazine The Devil Wears Prada meets Postcards From the Edge in a hilariously heartfelt novel influenced in part by the author’s time assisting Carrie Fisher. Charlie Besson is tense and sweating as he prepares for an insane job interview. His car is idling, like his life, outside the Hollywood mansion of Kathi Kannon, star of stage and screen and People magazine’s worst dressed list. She needs an assistant. He needs a hero. Kathi is an icon, bestselling author, and an award winning actress, most known for her role as Priestess Talara in a blockbuster sci-fi film. She’s also known in another role: crazy. Admittedly so. Famously so. Fabulously so, as Charlie quickly discovers. Their three year odyssey is filled with late night shopping sprees, last minute trips to see the aurora borealis, and an initiation to that most bored of Hollywood tribes: the personal assistant. But Kathi becomes much more than a boss, and as their friendship grows, Charlie must make a choice. Will he always be on the sidelines of life, assisting the great forces that be, or can he step into his own leading role? Laugh-out-loud funny, and searingly poignant, Byron Lane’s A Star is Bored is a novel that, like the star at its center, is enchanting and joyous, heartbreacking and hopeful.

Privacy is Power-Carissa Véliz 2020-09-24 An Economist BEST BOOK OF THE YEAR: ‘galvanises an important conversation’. The first book to call for the end of the data economy. Carissa Veliz explores how our personal data is giving too much to big tech and governments, why that matters, and what we can do about it. Have you ever been denied insurance, a loan, or a job? Have you had your credit card number stolen? Do you have to wait too long when you call customer service? Have you paid more for a product than one of your friends? Have you been harassed online? Have you noticed politics becoming more divisive in your country? You might have the data economy to thank for all that and more. The moment you check your phone in the morning you are giving away your data. Before you’ve even switched off your alarm, a whole host of organisations have been alerted to when you woke up, where you slept, and with whom. Our phones, our TVs, even our washing machines are spies in our own homes.

Without your permission, or even your awareness, tech companies are harvesting your location, your likes, your habits, your relationships, your fears, your medical issues, and sharing it amongst themselves, as well as with governments and a multitude of data vultures. They’re not just selling your data. They’re selling the power to influence you and decide for you. Even when you’ve explicitly asked them not to. And it’s not just you. It’s all your contacts too, all your fellow citizens. Privacy is collective as it is personal. Digital technology is stealing our personal data and with it our power to make free choices. To reclaim that power, and our democracy, we must take back control of our personal data. Surveillance is undermining equality. We are being treated differently on the basis of our data. What can we do? The stakes are high. We need to understand the power of data better. We need to start protecting our privacy. And we need regulation. We need to pressure our representatives. It is time to pull the plug on the surveillance economy. Insightful, terrifying, practical: Privacy is Power highlights the implications of our laid-back attitude to data and sets out how we can take back control. If you liked The Age of Surveillance Capitalism, you’ll love Privacy is Power because it provides a philosophical perspective on the politics of privacy, and offers very practical solutions, both for policymakers and ordinary citizens. ‘An essential guide to one of the most pressing modern issues.’ HANNAH FRY ‘Essential reading for those of you who click ‘agree’ ten times a day.’ JONATHAN WOLFF
