Structure from Motion in the Geosciences-Jonathan L. Carrivick 2016-07-15 Structure from Motion with Multi View Stereo provides hyperscale landform models using images acquired from standard compact cameras and a network of ground control points. The technique is not limited in temporal frequency and can provide point cloud data comparable in density and accuracy to those generated by terrestrial and airborne laser scanning at a fraction of the cost. It therefore offers exciting opportunities to characterise surface topography in unprecedented detail and, with multi-temporal data, to detect elevation, position and volumetric changes that are symptomatic of earth surface processes. This book firstly places Structure from Motion in the context of other digital surveying methods and details the Structure from Motion workflow including available software packages and assessments of uncertainty and accuracy. It then critically reviews current usage of Structure from Motion in the geosciences, provides a synthesis of recent validation studies and looks to the future by highlighting opportunities arising from developments in allied disciplines. This book will appeal to academics, students and industry professionals because it balances technical knowledge of the Structure from Motion workflow with practical guidelines for image acquisition, image processing and data quality assessment and includes case studies that have been contributed by experts from around the world.

The Battle For Khe Sanh (Illustrated Edition)-Captain Moyers S. Shore II USMC 2014-08-15 Includes more than 10 maps and 20 illustrations "The Marines' heroic defense of the Khe Sanh area against numerically superior North Vietnamese forces stands out among the many battles fought to defend the Republic of Vietnam against Communist aggression. "The enemy's primary objective of his 1968 TET Offensive was to seize power in South Vietnam by creating a general uprising and causing the defection of major elements of the ARVN. In conjunction with this, the enemy apparently expected to seize by military action large portions of the northern two provinces lying just south of the Demilitarized Zone and there to set up a "liberation government." The virtually unopulated Khe Sanh Plateau, which lay astride the enemy's principal avenue of approach from his large base areas in Laos, was obviously an initial objective of the North Vietnamese Army.... "This report provides a detailed and graphic account of events as they unfolded. It centers about the 26th Marine Regiment, the main defenders of the Khe Sanh area, who tenaciously and magnificently held off the enemy during the two-and-one-half-month siege. Yet the battle of Khe Sanh was an inter-Service and international operation. Consequently, appropriate coverage is given to the contributions of the U.S. Army, Navy, and Air Force, and to South Vietnamese regular and irregular military units, all of whom contributed to the defense of the area and to the destruction of the enemy. As Marine artillery from within the fortified positions pounded the enemy, Army artillery located to the east provided heavy, long-range fire support. Fighter aircraft from the Marines, Air Force, and Navy provided continuous close air support, while B-52 bombers of the Strategic Air Command dealt decisive blows around-the-clock to enemy forces within striking distance of our positions and against enemy supply areas...."-General Westmoreland

Dictionary Of Word Roots-Donald Borrer 1960-09-01 One of the outstanding problems of the biologist, whether he be beginning student or specialist, is that of understanding technical terms. The best way to understand and remember technical terms is to understand first their component parts, or roots. This dictionary has been designed primarily to meet the needs of the beginning student, the medical student, and the taxonomist, but it should be of value to all biologists.

Handbook of Emergency Management Concepts-Michael L. Madigan 2017-12-06 This book provides a step-by-step process that focuses on how to develop, practice, and maintain emergency plans that reflect what must be done before, during, and after a disaster, in order to protect people and property. The communities who preplan and mitigate prior to any incident will be better prepared for emergency scenarios. This book will assist those with the tools to address all phases of emergency management. It covers everything from the social and environmental processes that generate hazards, to vulnerability analysis, hazard mitigation, emergency response, and disaster recovery.

Spec Ops-William H. McRaven 2009-02-04 Vice Adm. William H. McRaven helped to devise the strategy for how to bring down Osama bin Laden, and commanded the courageous U.S. military unit that carried it out on May 1, 2011, ending one of the greatest manhunts in history. In Spec Ops, a well-organized and deeply researched study, McRaven analyzes eight classic special operations. Six are from WWII: the German commando raid on the Belgian fort Eben Emael (1940); the Italian torpedo attack on the Alexandria harbor (1941); the British commando raid on Nazaire, France (1942); the German glider rescue of Benito Mussolini (1943); the British midget-submarine attack on the Tirpitz (1943); and the U.S. Ranger rescue mission at the Cabanatuan POW camp in the Philippines (1945). The two post-WWII examples are the U.S. Army raid on the Son Tay POW camp in North Vietnam (1970) and the Israeli rescue of the skyjacked hostages in Entebbe, Uganda (1976). McRaven—who commands a U.S. Navy SEAL team—pinpoints six essential principles of "spec ops" success: simplicity, security, repetition, surprise, speed and purpose. For each of the case studies, he provides political and military context, a meticulous reconstruction of the mission itself and an analysis of the operation in relation to his six principles. McRaven deems the Son Tay raid "the best modern example of a successful spec op [which] should be considered textbook material for future missions." His own book is an instructive textbook that will be closely studied by students of the military arts. Maps, photos.

Field and Service Robotics-Marco Hutter 2017-11-01 This book contains the proceedings of the 11th FSR (Field and Service Robotics), which is the leading single-track conference on applications of robotics in challenging environments. This conference was held in Zurich, Switzerland from 12-15 September 2017. The book contains 45 full-length, peer-reviewed papers organized into a variety of topics: Control, Computer Vision, Inspection, Machine Learning, Mapping, Navigation and Planning, and Systems and Tools. The goal of the book and the conference is to report and encourage the development and experimental evaluation of field and service robots, and to generate a vibrant exchange and discussion in the community. Field robots are non-factory robots, typically mobile, that operate in complex and dynamic environments: on the ground (Earth or other planets), under the ground, underwater, in the air or in space. Service robots are those that work closely with humans to help them with their lives. The first FSR was held in Canberra, Australia, in 1997. Since that first meeting, FSR has been held roughly every two years, cycling through Asia, Americas, and Europe.

Computational Intelligence in Data Mining - Volume 1-Lakhm C. Jain 2014-12-10 The contributed volume aims to explicate and address the difficulties and challenges for the seamless integration of two core disciplines of computer science, i.e., computational intelligence and data mining. Data Mining aims at the automatic discovery of underlying non-trivial knowledge from datasets by applying intelligent analysis techniques. The interest in this research area has experienced a considerable growth in the last years due to two key factors: (a) knowledge hidden in organizations' databases can be exploited to improve strategic and managerial decision-making; (b) the large volume of data managed by organizations makes it impossible to carry out a manual analysis. The book addresses different methods and techniques of integration for enhancing the overall goal of data mining. The book helps to disseminate the knowledge about some innovative, active research directions in the field of data mining, machine and computational intelligence, along with some current issues and applications of related topics.

Predator Empire-Ian G. R. Shaw 2016-08-15 What does it mean for human beings to exist in an era of dronified state violence? How can we understand the rise of robotic systems of power and domination? Focusing on U.S. drone warfare and its broader implications as no other book has to date, Predator Empire argues that we are witnessing a transition from a labor-intensive "American empire" to a machine-intensive "Predator Empire." Moving from the Vietnam War to the War on Terror and beyond, Ian G. R. Shaw reveals how changes in military strategy, domestic policing, and state surveillance have come together to enclose our planet in a robotic system of control. The rise of drones presents a series of "existential crises," he suggests, that are reengineering not only spaces of violence but also the character of the modern state. Positioning drone warfare as part of a much longer project to watch and enclose the human species, he shows that for decades—centuries even—human existence has slowly but surely been brought within the artificial worlds of "technological civilization." Instead of incarcerating us in prisons or colonizing territory directly, the Predator Empire locks us inside a worldwide system of electromagnetic enclosure—in which democratic ideals give way to a system of totalitarian control, a machinic "rule by Nobody." As accessibly written as it is theoretically ambitious, Predator Empire provides up-to-date information about U.S. drone warfare, as well as an in-depth history of the rise of drones.

Pentagon 9/11- 2007 The response and subsequent performance of federal, state, and especially local agencies, in particular their coordination and cooperation with each other and with Pentagon authorities, provide lessons for dealing with other large-scale emergencies in the future. Material used in this study was distilled from more than 1,300 interviews, relying on the corroborative testimony of two or more witnesses wherever possible.

Progress and Purpose-Kenneth J. Clifford 2014-06-01 Marine Corps contributions to the development of doctrine, tactics, and techniques of amphibious warfare have been cited in various Marine Corps histories for at least the past 70 years. It was the idea of Lieutenant General James M. Masters, Sr., then Commandant of Marine Corps Schools, 1966—1968, to restate these contributions and to cite some other contributions such as the doctrine of vertical envelopment and the use of helicopters in land warfare. My idea was to tell the story of these contributions without using a chronology of Marine "firsts." The book is generally divided into decades giving the status of the Marine Corps during the particular decade, coupled with a brief introduction into the political and economic climate of the times. This was of course important because it is those economic and political factors that directly affected the military situation. In researching for the story, three unique things became apparent. The first was that in 1932, the Marine Corps Schools at Quantico chose to study a case history in disaster from World War I, the Gallipoli-Dardanelles Campaign of 1915—16. Rear Admiral L.E.H. Maund, Royal Navy, might have given the answer for Marine Corps Schools if it had been asked of them—Why study Gallipoli? Admiral Maund said of Gallipoli, "It had imagination, it had the promise of great strategic gains; while the reasons for its failure could easily be discerned and had to do with lack of technique, material and belief in this form of warfare—shortcomings that could all be overcome." It is the "shortcomings" that Marine planners had overcome by the commencement of World War II. The second unique accomplishment that surfaced was that Marine Corps Schools had the first written doctrine on landing operations before it had suitable landing boats to carry out the doctrine. In like fashion, within 15 years after the "Tentative Landing Operations Manual" was published, the Marine Corps Schools had the first written doctrine on helicopter operations before actually possessing a helicopter. In this work the fighting record of the U.S. Marine Corps is not discussed but rather the inventiveness of those Marines who pioneered the amphibious role that would be played by the Corps in the 20th century.

Computational Medicine-Zlatko Trajanoski 2012-09-19 Computational methodologies and modeling play a growing role for investigating mechanisms, and for the diagnosis and therapy of human diseases. This progress gave rise to computational medicine, an interdisciplinary field at the interface of computer science and medicine. The main focus of computational medicine lies in the development of data analysis methods and mathematical modeling as well as computational simulation techniques specifically addressing medical problems. In this book, we present a number of computational medicine topics at several scales: from molecules to cells, organs, and organisms. At the molecular level, tools for the analysis of genome variations as well as cloud computing resources for medical genetics are reviewed. Then, an analysis of gene expression data and the application to the characterization of microbial communities are highlighted. At the protein level, two types of analyses for mass spectrometry data are reviewed: labeled quantitative proteomics and lipidomics, followed by protein sequence analysis and a 3D structure and drug design chapter. Finally, three chapters on clinical applications focus on the integration of biomolecular and clinical data for cancer research, biomarker discovery, and network-based methods for computational diagnostics.

If the Universe Is Teeming with Aliens ... WHERE IS EVERYBODY?-Stephen Webb 2002-10-04 In a 1950 conversation at Los Alamos, four world-class scientists generally agreed, given the size of the Universe, that advanced extraterrestrial civilizations must be present. But one of the four, Enrico Fermi, asked, "If these civilizations do exist, where is everybody?" Given the fact that there are perhaps 400 million stars in our Galaxy alone, and perhaps 400 million galaxies in the Universe, it stands to reason that somewhere out there, in the 14 billion-year-old cosmos, there is or once was a civilization at least as advanced as our own. Webb discusses in detail the 50 most cogent and intriguing solutions to Fermi's famous paradox.
