My Life in Advertising-Claude C. Hopkins 1917 This book is not written as a personal history, but as a business story. I have tried to avoid trivialities and to confine myself to matters of instructive interest. The chief object behind every episode is to offer helpful suggestions to those who will follow me. And to save them some of the midnight groping which I did. One night in Los Angeles I told this story to Ben Hampton, writer, publisher, and advertising man. He listened for hours without interruption, because he saw in this career so much of value to beginners. He never rested until he had my promise to set down the story for publication. He was right. Any man who by a lifetime of excessive application learns more about anything than others owes a statement to successors. The results of research should be recorded. Every pioneer should blaze his trail. That is all I have tried to do. When this autobiography was announced as a serial many letters of protest came to me. Some of them came from the heads of big businesses which I had served. Behind them appeared the fear that I would claim excessive credit to the hurt of others' pride. I rewrote some of the chapters to eliminate every possible cause for such apprehensions.

Michael Hamburger-Tacita Dean 2013-12 Tacita Dean's portrait of the poet and translator Michael Hamburger was filmed, at his home in rural Suffolk, in the last year of his life.Set against muted autumn colours, and with Hamburger performing an evocative, anecdotal inventory of the harvest from his apple orchard, the piece is a bittersweet reminder of time's passing that deftly captures, and quietly honours, an exemplary 20th century literary figure.Featuring a new essay by Brian Dillon, Dean's own notes on the making of the project, and a transcript of its central voiceover monologue, this publication looks back at the film, one that takes its place alongside a number of studies by Dean of other major creative and artistic figures, and one that remains one of her most enduring and affecting achievements.

Numerical Techniques in Electromagnetics, Second Edition-Matthew N.O. Sadiku 2000-07-12 As the availability of powerful computer resources has grown over the last three decades, the art of computation of electromagnetic (EM) problems has also grown - exponentially. Despite this dramatic growth, however, the EM community lacked a comprehensive text on the computational techniques used to solve EM problems. The first edition of Numerical Techniques in Electromagnetics filled that gap and became the reference of choice for thousands of engineers, researchers, and students. The Second Edition of this bestselling text reflects the continuing increase in awareness and use of numerical techniques and incorporates advances and refinements made in recent years. Most notable among these are the improvements made to the standard algorithm for the finite difference time domain (FDTD) method and treatment of absorbing boundary conditions in FDTD, finite element, and transmission-line-matrix methods. The author also added a chapter on the method of lines. Numerical Techniques in Electromagnetics continues to teach readers how to pose, numerically analyze, and solve EM problems, give them the ability to expand their problem-solving skills using a variety of methods, and prepare them for research in electromagnetism. Now the Second Edition goes even further toward providing a comprehensive resource that addresses all of the most useful computation methods for EM problems.
