The Behaviour of the Domestic Cat-John W. S. Bradshaw 2012 The behaviour of domesticated animals is a subject of great importance to students of animal behaviour and veterinary medicine, as well as interested pet owners. This new edition of the 1992 book fully updates the original chapters with new research from the past two decades, while also including two new chapters covering behavioural disorders due to pathologies and from misdirected natural behaviour. " Fully updated throughout" New chapters"

Written by well-renowned feline behaviour expertsThe book aims to present a readable overview of the behaviour of the domestic cat,

adopting both a mechanistic and functional approach. The first half of the book is mainly concerned with physiological, developmental and psychological aspects; this includes chapters on domestication, the development of the senses, learning, communication and feeding behaviour. To provide a comprehensive resource on the subject, the second half of the book looks at social behaviour, hunting and predation, cat-human interactions and welfare. Also essential reading for cat breeders and researchers of domestic animal behaviour, this new textbook is the quintessential source of cat behaviour information.

Cat Sense—John Bradshaw 2013-09-10 Cats have been popular household pets for thousands of years, and their numbers only continue to rise. Today there are three cats for every dog on the planet, and yet cats remain more mysterious, even to their most adoring owners. Unlike dogs, cats evolved as solitary hunters, and, while many have learned to live alongside humans and even feel affection for us, they still don't quite "get us" the way dogs do, and perhaps they never will. But cats have rich emotional lives that we need to respect and understand if they are to thrive in our company. In *Cat Sense*, renowned anthrozoologist John Bradshaw takes us further into the mind of the domestic cat than ever before, using cutting-edge scientific research to dispel the myths and explain the true nature of our feline friends. Tracing the cat's evolution from lone predator to domesticated companion, Bradshaw shows that although cats and humans have been living together for at least eight thousand years, cats remain independent, predatory, and wary of contact with their own kind, qualities that often clash with our modern lifestyles. Cats still have three out of four paws firmly planted in the wild, and within only a few generations can easily revert back to the independent way of life that was the exclusive preserve of their predecessors some 10,000 years ago. Cats are astonishingly flexible, and given the right environment they can adapt to a life of domesticity with their owners—but to continue to do so, they will increasingly need our help. If we're to live in harmony with our cats, Bradshaw explains, we first need to understand their inherited quirks: understanding their body language, keeping their environments—however small—sufficiently interesting, and becoming more proactive in managing both their natural hunting

instincts and their relationships with other cats. A must-read for any cat lover, *Cat Sense* offers humane, penetrating insights about the domestic cat that challenge our most basic assumptions and promise to dramatically improve our pets' lives—and ours.

*The Domestic Cat*-Dennis C. Turner 1988 Many myths and fables surround cats, leaving them open to persecution and misunderstanding. Covering all types from pampered pets to feral hunters, this completely revised new edition of *The Domestic Cat* shows how cats live and behave in a variety of circumstances and surroundings. With new chapters on welfare issues, and cat-cat communication, this volume penetrates the enigma that is *Felis catus*, sorting fact from fiction.

*Feline Behaviour and Welfare*-Andrew F. Fraser 2012 Cats are the world's most popular domestic pet, as well as being wild animals. This comprehensive book on feline behaviour explores both the familiar domesticated animal and wild relatives such as the leopard, tiger and lynx to examine the Felidae family as a whole, allowing for fascinating comparisons between wild and domestic species and explanations of behaviour in pet cats with evolutionary origins. Fraser's work helps increase readers' understanding of cat behaviour - why they behave as they do, for what purpose and why. The focus is on identifying normal behaviour from the cat's perspective.

*Felines of the World*-Giovanni G. Bellani 2019-09-19 *Felines of the World: Discoveries in Taxonomic Classification and History* provides the most recent taxonomic, paleontological, phylogenetic and DNA advances of wild felid and domestic cat species following guidelines dictated by the IUCN SSC Cat Specialist Group. It highlights the importance of felines and their role as predators in maintaining the ecological biome balance in which they have evolved. The book delves into the anatomical, evolutionary and zoogeographic features of fossil and current felid species. Each species is described in detail, detailing its classification, habitat and biological habits. This book also presents the most updated threat and conservation status of each species. This book is an ideal resource for zoologists and paleontologists, primarily those interested in the evolution and

Details the lineage, features and habits of over 40 felid species Covers all species within the Felidae family, including lions, lynxes, pumas and domestic cats Features detailed and colorful illustrations, diagrams and species location maps Informs readers on endangered species, current threats and conservation efforts

Cats-Taniyah Zakrevsky 2012 This book presents topical research in the study of the biology, behaviour and health disorders of cats. Topics discussed include the diagnosis, treatment and prevention of parasitic infections in cats; development of the cat sympathetic ganglia in postnatal ontogenesis; feline perioperative analgesia; streptococcal disease as an emerging pathogen of cats; feline endometrial adenocarcinoma; and non-spatial visual recognition memory in cats.

The Welfare of Cats-Irene Rochlitz 2007-04-17 Written by experts from the UK, the USA and Switzerland, this book focuses on the major issues affecting the welfare of domestic cats. It covers behaviour, the human-cat relationship, and the impact of housing, disease, nutrition and breeding on welfare.

The Photo Ark-Joel Sartore 2017 This lush book of photography represents National Geographic's Photo Ark, a major cross-platform initiative and lifelong project by photographer Joel Sartore to make portraits of the world's animals-especially those that are endangered. His powerful message, conveyed with humor, compassion, and art- to know these animals is to save them.Sartore intends to photograph every animal in captivity in the world. He is circling the globe, visiting zoos and wildlife rescue centers to create studio portraits of 12,000 species, with an emphasis on those facing extinction. He has photographed more than 6,000 already and now, thanks to a multi-year partnership with National Geographic, he may reach his goal. This book showcases his animal portraits- from tiny to mammoth, from the Florida grasshopper sparrow to the greater one-horned rhinoceros. Paired with the eloquent prose of veteran wildlife writer Douglas Chadwick, this book presents a thought-provoking argument for saving all the species of our planet.

Cat Wars-Peter P. Marra 2016-09-20 In 1894, a lighthouse keeper named David Lyall arrived on Stephens Island off New Zealand with a cat named Tibbles. In just over a year, the Stephens Island Wren,

Downloaded from

a rare bird endemic to the island, was rendered extinct. Mounting scientific evidence confirms what many conservationists have suspected for some time—that in the United States alone, free-ranging cats are killing birds and other animals by the billions. Equally alarming are the little-known but potentially devastating public health consequences of rabies and parasitic *Toxoplasma* passing from cats to humans at rising rates. *Cat Wars* tells the story of the threats free-ranging cats pose to biodiversity and public health throughout the world, and sheds new light on the controversies surrounding the management of the explosion of these cat populations. This compelling book traces the historical and cultural ties between humans and cats from early domestication to the current boom in pet ownership, along the way accessibly explaining the science of extinction, population modeling, and feline diseases. It charts the developments that have led to our present impasse—from Stan Temple's breakthrough studies on cat predation in Wisconsin to cat-eradication programs underway in Australia today. It describes how a small but vocal minority of cat advocates has campaigned successfully for no action in much the same way that special interest groups have stymied attempts to curtail smoking and climate change. *Cat Wars* paints a revealing picture of a complex global problem—and proposes solutions that foresee a time when wildlife and humans are no longer vulnerable to the impacts of free-ranging cats.

Wild Cats of the World-Mel Sunquist 2002-08-15 A detailed volume on thirty-six species of cats from around the world, from the two-pound black-footed cat to the 500-pound tiger, draws on a wide range of sources and provides information on each variety's characteristics, distribution, ecology, behavior, status in the wild, and conservation efforts.

Laboratory Animal Medicine-James G. Fox 2013-10-02 Laboratory Animal Medicine is a compilation of papers that deals with the diseases and biology of major species of animals used in medical research. The book discusses animal medicine, experimental methods and techniques, design and management of animal facilities, and legislation on laboratory animals. Several papers discuss the biology and diseases of mice, hamsters, guinea pigs, and

rabbits. Another paper addresses the dog and cat as laboratory animals, including sourcing of these animals, housing, feeding, and their nutritional needs, as well as breeding and colony management. The book also describes ungulates as laboratory animals, including topics on sourcing, husbandry, preventive medical treatments, and housing facilities. One paper addresses primates as test animals, covering the biology and diseases of old world primates, Cebidae, and ferrets. Some papers pertain to the treatment, diseases, and needed facilities for birds, amphibians, and fish. Other papers then deal with techniques of experimentation, anesthesia, euthanasia, and some factors (spontaneous diseases) that complicate animal research. The text can prove helpful for scientists, clinical assistants, and researchers whose work involves laboratory animals.

Made for Each Other-Meg Daley Olmert 2010-02-23 The science behind our attraction and attachment to animals, and how it benefits us: "A fascinating, wide-ranging and easy read." —New Scientist Nothing turns a baby's head more quickly than the sight or sound of an animal. This fascination is driven by the ancient chemical forces that first drew humans and animals together. It is also the same biology that transformed wolves into dogs and skittish horses into valiant comrades that would carry us into battle. Made for Each Other is the first book to explain how this chemistry of attraction and attachment flows through—and between—all mammals to create the profound emotional bonds humans and animals still feel today. Drawing on recent discoveries from neuroscience, evolutionary biology, behavioral psychology, and archeology, as well as her own investigations, Meg Daley Olmert explains why the brain chemistry humans and animals trigger in each other also has a profound effect on our mental and physical well being. This lively and original investigation asks what happens when the bond is severed. If thousands of years of caring for animals infused us with a biology that shaped our hearts and minds, do we dare turn our back on it? Daley Olmert makes a compelling and scientific case for what our hearts have always known, that we were, and always will be, made for each other. "One of those delectably synergistic books that tie together threads of science, history, and everyday life." —Booklist

2013-04-22 Over-selection for production traits has caused animal welfare problems such as feather pecking in hens, tail biting in pigs, and overly aggressive animals. In dogs, over-selection for appearance traits has caused neurological problems such as deafness. Both feather pecking and tail biting may be displaced foraging behaviors, because these behaviors are reduced by providing foraging materials such as straw. Another problem is hunger in broiler breeder hens and breeding sows. Animals that have been selected for rapid growth are also selected for a huge appetite. If breeder animals eat to satiation, they will become obese and have health problems. High-roughage feeds may improve welfare. Researchers suggest that new genetic breeding tools could be used to select against harmful behaviors and still have a productive animal. Breeders must avoid creating animals that will have poor welfare even when they are housed in the best environment.

The Inner Life of Cats-Thomas McNamee 2017-03-28 Our feline companions are much-loved but often mysterious. In The Inner Life of Cats, Thomas McNamee blends scientific reportage with engaging, illustrative anecdotes about his own beloved cat, Augusta, to explore and illuminate the secrets and enigmas of her kind. As it begins, The Inner Life of Cats follows the development of the young Augusta while simultaneously explaining the basics of a kitten's physiological and psychological development. As the narrative progresses, McNamee also charts cats' evolution, explores a feral cat colony in Rome, tells the story of Augusta's life and adventures, and consults with behavioral experts, animal activists, and researchers, who will help readers more fully understand cats. McNamee shows that with deeper knowledge of cats' developmental phases and individual idiosyncrasies, we can do a better job of guiding cats' maturation and improving the quality of their lives. Readers' relationships with their feline friends will be happier and more harmonious because of this book.

Wild Cats of the World-Luke Hunter 2015-10-22 Ranging from the largest - the Tiger to the smallest species - the Rusty-spotted Cat and Black-footed Cat, the world's wild cats are some of the most beautiful, ferocious and feared carnivores in the world. species and landscapes—the last best hope for preserving our natural home. Scientists worldwide are warning of the looming extinction of thousands of species, from tigers and polar bears to rare flowers, birds, and insects. If the destruction continues, a third of all plants and animals could disappear by 2050—and with them earth's life-support ecosystems that provide our food, water, medicine, and natural defenses against climate change. Now Caroline Fraser offers the first definitive account of a visionary campaign to confront this crisis: rewilding. Breathtaking in scope and ambition, rewilding aims to save species by restoring habitats, reviving migration corridors, and brokering peace between people and predators. Traveling with wildlife biologists and conservationists, Fraser reports on the vast projects that are turning Europe's former Iron Curtain into a greenbelt, creating trans-frontier Peace Parks to renew elephant routes throughout Africa, and linking protected areas from the Yukon to Mexico and beyond. An inspiring story of scientific discovery and grassroots action, *Rewilding the World* offers hope for a richer, wilder future. Animal Personalities-Claudio Carere 2013-03-07 Ask anyone who has owned a pet and they'll assure you that, yes, animals have personalities. And science is beginning to agree. Researchers have demonstrated that both domesticated and nondomesticated animals—from invertebrates to monkeys and apes—behave in consistently different ways, meeting the criteria for what many define as personality. But why the differences, and how are personalities shaped by genes and environment? How did they evolve? The essays in *Animal Personalities* reveal that there is much to learn from our furred and feathered friends. The study of animal personality is one of the fastest-growing areas of research in behavioral and evolutionary biology. Here Claudio Carere and Dario Maestripieri, along with a host of scholars from fields as diverse as ecology, genetics, endocrinology, neuroscience, and psychology, provide a comprehensive overview of the current research on animal personality. Grouped into thematic sections, chapters approach the topic with empirical and theoretical material and show that to fully understand why personality exists, we must consider the evolutionary processes that give rise to personality, the ecological correlates of personality differences, and the physiological mechanisms underlying personality variation.
