Knit to Flatter-Amy Herzog 2014-04-15 Knit to Flatter is about celebrating the body you have been given and creating sweaters that make you look and feel great. Part instruction manual and part pattern collection, Knit to Flatter teaches you how to assess your shape—top-heavy, bottom-heavy, or proportional—and then knit accordingly. With a great sense of fun and acceptance, Amy Herzog presents silhouettes and styles that work with each body shape, along with four ideal sweater patterns per category. She then provides patterns for 10 more sweaters with guidelines for customizing, so they can be tailored to flatter. Each pattern is written in up to 10 sizes, and the garments are photographed on models with genuine curves. No smoke and mirrors here. Just real beauty! Praise for Knit to Flatter: Knit to Flatter is \$24.95 in the US, which works out to a little more than \$1 per style, but you shouldn't expect to make all the styles in this book. What you will get is great lessons on what looks best on you and why—terrific information you can use to your own best advantage. Some people might say that sort of information is priceless." —My Central Jersey's In Stitches blog "Garment knitters rejoice! Knit to Flatter is the latest book by Amy Herzog, and its a mine of resources. . . ." —Knit Edge magazine "A knitter's manifesto!" — "Stash and Burn" podcast "Every knitter that knits sweaters should own this book. The feeling of this book is 100% body positive. Go buy it already!" —Knitty.com "I feel like this book is one that is so needed right now. There are a few more luscious knitwear patterns being designed and released these days, it's easy to rush into knitting everything that is popular. I know I've been guilty of that, and then disappointed in the end when the finished garment made me embarrassed to wear it in public. Getting more guidance on what styles would be more suitable seems like the smartest thing to do before investing a good chunk of change in a sweater's worth of yarn." —Sweet Georgia Yarns "There is no doubt in mind that you are bound to fall in love with more than a few of these sweaters and the techniques that bring them into being." —The A.D.D. Knitter "If you have not rushed out to buy this book you should." —Blue Moon Fiber Arts "What this book really is, is the girlfriend you take when you go shopping. The one who's not afraid to say, "Hmmm maybe not those jeans, try these instead." We've got Amy. She's going to help us all get over those numbers on the tape measure, on the scale, on the tag in our clothes and focus on what works." —Savory Knitting "Such self-assuredness is a gift we all were born with and deserve to feel on a daily basis. You wouldn't think we needed a book like this, but we do. We're lucky it's here." —Knitter's Review "I'm a little obsessed with knitters making sweaters that fit and look good on them. I was so excited when I got Amy Herzog's new book." —Knitty.com "Gosh darn cute, the pink polka dot binding, the layout and graphic design of the book, the models . . . (i could go on & on), the book is just gosh darn welcoming, friendly, and like a great friend who always tells you the truth. It makes you feel awesome to see REAL women's bodies in here." —Luvinthemommyhood "You pick a pattern and buy some yarn. One hundred and fifty dollars and forty hours later, you try on your freshly knitted sweater and . . . oh no. You vow to take up scrapbooking. Which is why we need Knit to Flatter. Kudos to the author and the production team for including models of diverse colors, shapes and sizes, creating a look book to which we can all relate." —Vogue Knitting "Amy's collection is as beautiful as expected from such a talented

Tissue and Organ Regeneration-Lijie Grace Zhang 2016-04-19 Tissue engineering aims to develop biological substitutes that restore, maintain, or improve damaged tissue and organ functionality. To date, numerous stem cells and biomaterials have been explored for a variety of tissue and organ regeneration. The challenge for existing stem cell-based techniques is that current therapies lack controlled environments that are crucial for regulating stem cell engraftment and differentiation in vivo, because stem cells are rather sensitive to even minute changes in their environment. Micro- and nanotechnology hold great potential to fabricate biomimetic spatiotemporally controlled scaffolds as well as control stem cell behavior and fate by micro- and nanoscale cues. This book presents the latest micro- and nanotechnologies used to manipulate stem cell behaviors, which is a critical area for regenerative medicine. Moreover, it covers and details cutting-edge research in nano- and microfabrication techniques and biomaterials for the regeneration of various tissues and organs, such as bone, cartilage, craniofacial, osteochondral, muscle, bladder, cardiac, and vascular tissues. Progress and Purpose-Kenneth J. Clifford 2014-06-01 Marine Corps contributions to the development of doctrine, tactics, and techniques of amphibious warfare have been cited in various Marine Corps histories for at least the past 70 years. It was the idea of Lieutenant General James M. Masters, Sr., then Commandant of Marine Corps Schools, 1966—1968, to restate these contributions and to cite some other contributions such as the doctrine of vertical envelopment and the use of helicopters in land warfare. My idea was to tell the story of these contributions without using a chronology of Marine "firsts." The book is generally divided into decades giving the status of the Marine Corps during the particular decade, coupled with a brief introduction into the political and economic climate of the times. This was of course important because it is those economic and political factors that directly affected the military situation. In researching for the story, three unique things became apparent. The first was that in 1932, the Marine Corps Schools at Quantico chose to study a case history in disaster from World War I, the Gallipoli-Dardanelles Campaign of 1915—16. Rear Admiral L.E.H. Maund, Royal Navy, might have given the answer for Marine Corps Schools if it had been asked of them—Why study Gallipoli? Admiral Maund said of Gallipoli, "It had imagination, it had the promise of great strategic gains; while the reasons for its failure could easily be discerned and had to do with lack of technique, material and belief in this form of warfare—shortcomings that could all be overcome." It is the "shortcomings" that Marine planners had overcome by the commencement of World War II. The second unique accomplishment that surfaced was that Marine Corps Schools had the first written doctrine on landing operations before it had suitable landing boats to carry out the doctrine. In like fashion, within 15 years after the "Tentative Landing Operations Manual" was published, the Marine Corps Schools had the first written doctrine on helicopter operations before actually possessing a helicopter. In this work the fighting record of the U.S. Marine Corps is not discussed but rather the inventiveness of those Marines who pioneered the amphibious role that would be played by the Corps in the 20th century.

This addictive-to-read anthology celebrates yarn—specifically, the knitter's reputation for acquiring it in large quantities and storing it away in what's lovingly referred to as a "stash." Consider contributions from knitting and teaching luminaries, including: Stitch 'n Bitch co-founder Debbie Stoller Meg Swansen, daughter of master knitter Elizabeth Zimmermann Knitting blogger and author Susan B. Anderson alongside offerings from knitting greets Amy Herzog, Stephanie Pearl-McPhee, and Franklin Habit—plus, stories from a romance novelist, an illustrator, a PhD-wielding feminist publisher, a globetrotting textile artist, a licensed clinical social worker, and the people behind the world's largest collective online stash, Ravelry.com. The pieces range from comical to earnest, lighthearted to deeply philosophical as each seeks to answer the question of how the stash a knitter has accumulated over the years reflects his or her place in universe. The stories in A Stash of One's Own represent and provide validation for knitters' wildly varying perspectives on yarn, from holding zero stash, to stash-busting, to stockpiling masses of it—and even including it in estate plans. It examines recyclable synthetic fibre-thermoplastic composites as alternatives, then covers polymers derived from natural sources. The text details the factors that influence properties, and considers clean processing, applications, recycling, degradation, and reprocessing. The book is essential for government agricultural departments, automotive companies, and others devoted to eco-friendly materials and production. A History of Mass Communication-Irving Fang 1997-02-27 This exciting new text traces the common themes in the long and complex history of mass communication. It shows how the means of communicating grew out of their eras, how they developed, how they influenced the societies of those eras, and how they have continued to exert their influence upon subsequent generations. The book is divided into six periods which are identified as 'Information Revolutions' writing, printing, mass media, entertainment, the 'toolshed' (which we call 'home' now), and the Information Highway. In looking at the ways in which the tools of communication have influenced and been influenced by social change, A History of Mass Communication provides students of media and journalism with a strong sense of the way their chosen field affects how society functions. Providing a broad-based approach to media history, Dr. Fang encourages the reader to take a careful look at where our culture is headed through the tools we use to communicate with one another.
