Using CAS Features Like a Champion-Lucas G. Allen 2012-08-01 Following up his popular "Introduction to the TI-Nspire," teacher and author Lucas Allen continues his TI-Nspire (TM) Tutorial Series from

[www.jaremicarey.com](http://www.jaremicarey.com) on

with a look at the TI-Nspire CAS. The CAS, or computer algebra system, version of the TI-Nspire is popular at the high school and college level alike for its ability to manipulate not just numbers, but variables. For all the amazing growth that the TI-Nspire platform has shown over the last few years, there still remains a lack of quality resources available for the CAS version of the TI-Nspire. This book is designed to address the needs of students and teachers in search of help with their TI-Nspire CAS. In this second volume of the series, careful attention is given to the CAS specific features of the TI-Nspire CAS. Basic features such as expanding, factoring, and solving simple equations are covered as well as more advanced techniques such as solving complex equations, derivatives, integrals, and differential equations. Any student or teacher working with mathematics from algebra through calculus can benefit from the techniques taught in this book. Everything in the book is up to date with the latest version of the TI-Nspire CAS operating system, version 3.2. If you don't have the latest version of the OS on your TI-Nspire CAS, the book has all of the information you'll need on how to update your calculator for free. Although the button sequences in the tutorials are designed with the TI-Nspire CX CAS and TI-Nspire CAS Touchpad in mind, even the original TI-Nspire Clickpad is capable of everything covered in the book by making slight modifications to the button sequences. Lucas Allen has become an authority on the use of the TI-Nspire CAS since its release, as he was an early adopter of the device for use with the math team he coaches in a public school in downstate Illinois. This past spring, his team captured the 2012 Illinois math team state championship, beating out many of Chicago's elite private schools. In this book, you will learn many of the exact same strategies his team uses on the TI-Nspire CAS. For over 10 years, Allen has taught mathematics at the high school level with students of every imaginable achievement level. He has worked with the TI-Nspire for almost half of that time. He blogs about graphing calculators and other math education technologies at Tech Powered Math.

pedagogical features, and prose that will appeal to today's student. Kokoska emphasizes statistical inference and decision making throughout. His fresh yet practical way to help students understand statistics is balanced by a logic that speaks to the teaching style of many instructors. Introductory Statistics: A Problem-Solving Approach has been extensively reviewed and class tested and feedback from instructors and students has shaped it throughout its development. Author Steve Kokoska blends solid mathematics with lucid writing to create a text that illustrates statistical concepts by using a stepped problem-solving approach. His textbook helps students understand the process of basic statistical arguments, a skill that will help them in their coursework and as they enter a life beyond academics. The driving philosophy of Introductory Statistics: A Problem-Solving Approach is simple: statistics is often hard for students but, when presented in an orderly, precise, friendly manner (and with some humor), statistics can change the way students think about math and about the world around them

The 7 Habits of Successful STEM Majors-Jjthetutor 2019-07-25  
The purpose of this text is to convince the student that their major chosen to study in college is correct, their concept of studying and how college works is flawed, and by doing so motivating the student to alter their habits, which will result in higher grades, a better understanding of the material and the reduction in the amount of time spent studying. All colleges have slightly different approaches to deliver data to the student; so please take the information as a universal approach to studying and adapt to it so that it best fits you, but keep in mind, that my directive is focused on students either entering into a science, technology, engineering, and mathematics (STEM) or a research style university straight out of high school or transition from community junior college to the university. Although the courses and the material covered are, in essence, synonymous throughout educational institutions, the way the material is taught and tested can be significantly different.
