Howling at the Moon-Walter Yetnikoff 2004-03-02 Show biz memoir at its name-dropping, bridge-burning, profane best: the music industry's most outspoken, outrageous, and phenomenally successful executive delivers a rollicking memoir of pop music's heyday. During the 1970s and '80s the music business was dominated by a few major labels and artists such as Michael Jackson, Bruce Springsteen, the Rolling Stones, Bob Dylan, Billy Joel, Paul Simon, Barbra Streisand and James Taylor. They were all under contract to CBS Records, making it the most successful label of the era. And, as the company's president, Walter Yetnikoff was the ruling monarch. He was also the most flamboyant, volatile and controversial personality to emerge from an industry and era defined by sex, drugs and debauchery. Having risen from working-class Brooklyn and the legal department of CBS, Yetnikoff, who freely admitted to being tone deaf, was an unlikely label head. But he had an uncanny knack for fostering talent and intimidating rivals with his appalling behavior—usually fueled by an explosive combination of cocaine and alcohol. His tantrums, appetite for mind-altering substances and sexual exploits were legendary. In Japan to meet the Sony executives who acquired CBS during his tenure, Walter was assigned a minder who confined him to a hotel room. True to form, Walter raided the minibar, got blasted and, seeing no other means of escape, opened a hotel window and vented his rage by literally howling at the moon. In Howling at the Moon, Yetnikoff traces his journey as he climbed the corporate mountain, danced on its summit and crashed and burned. We see how Walter became the father-confessor to Michael Jackson as the King of Pop reconstructed his face and agonized over his image while constructing Thriller (and how, after it won seven Grammys, Jackson made the preposterous demand that Walter take producer Quincy Jones's name off the album); we see Walter, in maniacal pursuit of a contract, chase the Rolling Stones around the world and nearly come to blows with Mick Jagger in the process; we get the tale of how Walter and Marvin Gaye—fresh from the success of "Sexual Healing"—share the same woman, and of how Walter bonds with Bob Dylan because of their mutual Jewishness. At the same time we witness Yetnikoff's clashes with Barry Diller, David Geffen, Tommy Mottola, Allen Grubman and a host of others. Seemingly, the more Yetnikoff feeds his cravings for power, sex, liquor and cocaine, the more profitable CBS becomes—from \$485 million to well over \$2 billion—until he finally succumbs, ironically, not to substances, but to a corporate coup. Reflecting on the sinister cycle that left his career in tatters and CBS flush with cash, Yetnikoff emerges with a hunger for redemption and a new reverence for his working-class Brooklyn roots. Ruthlessly candid, uproariously hilarious and compulsively readable, Howling at the Moon is a blistering You'll Never Eat Lunch in this Town Again of the music industry.

Power, Process and Participation-Rachel Slocum 1995 This book focuses on participatory capacity-building in ways that address the practical needs and strategic interests of the disadvantaged and disempowered - it examines how differences in class, ethnicity, race, caste, religion, age and gender lead to the 'politics of exclusion'. It offers innovative, accessible tools to enable facilitators from both inside and outside communities to empower those who are frequently omitted from decision-making processes. The style and approach are interactive, stimulating reflection and involvement by all parties. Power, Process and Participation aims to enable facilitators from inside and outside communities to involve and empower those commonly excluded in decision making processes. It provides a balanced overview of how 'participation' has been used in this context and raises the questions that all those involved in this type of activity should ask themselves. There are three distinct sections: Part 1: Definitions, history and issues - which provides an overview of some of the broad issues underlying the themes addressed in this book. A useful brief history is given of well known participatory methodologies and key questions are asked on the use and misuse of 'participation': whose ends does it serve, who is involved and what are the power relations, appropriate time frames and scale and how should it proceed in order to best serve the interests of the people involved? Part 2: Methods and ethics in our research and our use of the mediaN251pp - Whose expertise counts? How is it acknowledged? These are explored in the context of contributors' experience of undertaking research with women in Zimbabwe. Questions of ownership and consent as well as other issues are discussed further in the context of the use of video in participatory communication. Part 3: Tools for environmental and social change - The longest section in the book gives 35 tools and how to use them in facilitating participation. An introductory session explains how to use the section. Tools are cross referenced and for each the purpose, materials, process and estimated time is provided. For a number of the tools, examples of how they have been used in practice are included. Power, Process and Participation describes itself as a manual and although it does not immediately look like one, it is readable, logically arranged and combines instructions on how tools can be used with examples of how they have been used in practice. There are notes on how to use the book and how to choose from the tools offered. This book would be useful to anyone looking for both an overview of participation and how it can be used and misused; and guidance on facilitating the process.

The Environment of Oil-R.J. Gilbert 1993 Oil is the lifeblood of the global economy, and its misuse carries the risk of heavy economic and environmental penalties. This book is a collection of essays bearing on economic growth and environmental concerns for a world that will continue to be dependent on oil throughout the next century. Topics include the outlook for petroleum demand and supply, the potential for alternatives to a petroleum-based economy, the costs of controlling automobile emissions, the environmental costs of moving oil by tanker and pipeline, and competition issues in the production and distribution of petroleum products. The wide range of topics reflects the many different ways in which petroleum and use affect the quality of our lives. The essays are the end results of an initiative by the University of California Energy Institute and reflect careful research into the costs and benefits of the petroleum economy. Together, they offer new insights into the critical task of living with oil, for today and for the future.

At Home and Astray-Philip Howell 2015-04-13 Although the British consider themselves a nation of dog lovers, what we have come to know as the modern dog came into existence only after a profound, and relatively recent, transformation in that country's social attitudes and practices. In At Home and Astray, Philip Howell focuses on Victorian Britain, and especially London, to show how the dog's changing place in society was the subject of intense debate and depended on a fascinating combination of forces even to come about. Despite a relationship with humans going back thousands of years, the dog only became fully domesticated and installed at the heart of the middle-class home in the nineteenth century. Dog breeding and showing proliferated at that time, and dog ownership increased considerably. At the same time, the dog was increasingly policed out of public space, the "stray" becoming the unloved counterpart of the household "pet." Howell shows how this redefinition of the dog's place illuminates our understanding of modernity and the city. He also explores the fascinating process whereby the dog's changing role was proposed, challenged, and confronted—and in the end conditionally accepted. With a supporting cast that includes Charles Dickens, Elizabeth Barrett Browning, Thomas Carlyle, and Charles Darwin, and subjects of inquiry ranging from vivisection and the policing of rabies to pet cemeteries, dog shelters, and the practice of walking the dog, At Home and Astray is a contribution not only to the history of animals but also to our understanding of the Victorian era and its legacies.

Control of Power Inverters in Renewable Energy and Smart Grid Integration-Qing-Chang Zhong 2012-11-16 Integrating renewable energy and other distributed energysources into smart grids, often via power inverters, is arguablythe largest "new frontier" for smart grid advancements. Inverters should be controlled properly so that their integration does not jeopardize the stability and performance of power systems and a solid technical backbone is formed to facilitate other functions and services of smart grids. This unique reference offers systematic treatment of important control problems in power inverters, and different general converter theories. Starting at a basic level, it presents conventional power conversion methodologies and then 'non-conventional' methods, with a highly accessible summary of the latest developments in power inverters as well as insight into the grid connection of renewable power. Consisting of four parts - Power Quality Control, Neutral Line Provision, Power Flow Control, and Synchronisation - this book fully demonstrates the integration of control and power electronics. Key features include: the fundamentals of power processing and hardware design innovative control strategies to systematically treat the control of power inverters extensive experimental results for most of the control strategies presented the pioneering work on "synchronverters" which has gained IET Highly Commended Innovation Award Engineers working on inverter design and those at power system utilities can learn how advanced control strategies could improve system performance and work in practice. The book is a useful reference for researchers who are interested in the area of control engineering, power electronics, renewable energy and distributed generation, smart grids, flexible AC transmission systems, and power systems for more-electric aircraft and all-electric ships. This is also a handy text for graduate students and university professors in the areas of electrical power engineering, advanced control engineering, power electronics, renewable energy and smart grid

integration.
