Reviews on Biomarker Studies in Aging and Anti-Aging Research-Paul C. Guest 2019-09-06 Using both epidemiological and model organism approaches, we have gained new insights into the physiological and molecular aspects of aging, which has led to significant advancements in potential anti-aging strategies. Reviews on Biomarker Studies in Aging and Anti-Aging Research presents a series of reviews in various aspects of aging and age-related disease research along with several methods which have shown progress as potential anti-aging approaches. The book is aimed at researchers in the areas of aging and chronic disease, as well as to clinical scientists, physicians and major drug companies. It provides important information on disease mechanisms, and each chapter is presented in the context of the aging process, specific chronic diseases or different therapeutic areas.

Life-span Development-Leonie Sugarman 2004-03-01 This thorough revision of the highly successful first edition of Life-Span Development offers the reader a wide-ranging and thought provoking account of human development throughout the lifespan. The lifespan approach emphasises that development does not stop when we cease to be adolescents but goes on throughout adulthood and into old age. In initial chapters Leonie Sugarman outlines the issues surrounding the notion of development and how it can be studied, including reviews of the work of key theorists Erikson, Levinson and Gould. She goes on to consider the different ways in which the life course can be construed: as a series of age-related stages; as a cumulative sequence; as a series of developmental tasks; as a series of key life events and transitions or as a narrative construction which creates a sense of dynamic continuity. A final chapter looks at how people cope, the resources that are available and the theoretical and practical issues regarding interventions to assist them in the process. New to this edition is increased coverage of the topical issue of successful ageing and a new chapter on the increasingly popular narrative approach to lifespan development. This edition is also more student-friendly with exercises in self-reflection that encourage the reader to look at the development of their own lives or those of their current or future clients. Boxed material highlighting major theories and clarifying concepts is also included. This book will be invaluable for students of developmental and occupational psychology and professionals in the fields of health management, education and social work.

Ie-Psych Conc/Conn-Spencer A. Rathus 2003-07 PSYCHOLOGY: CONCEPTS AND CONNECTIONS, BRIEF VERSION, will help your students make the connections between key concepts in psychology and the connections between those concepts and their own lives. Spencer Rathus's warm and engaging writing style explains the fundamentals in ways that students can understand, and then goes a step further to show how those fundamentals relate to students' daily lives. Rathus's commitment to helping students learn goes beyond the text narrative and is reflected in the text's proven active learning system, PQ4R (Preview, Question, Read, Reflect, Review, and Recite). This system is seamlessly integrated into the book's companion Connections CD-ROM, the Book Companion Web Site, and the Study Guide--all of which are FREE with every new copy of the text. New "Learning Connections" and "Life Connections" sections in the text also include icons that cue students to interactive content on the Connections CD-ROM and the Book Companion Web Site. This seamless integration of text and technology enhances the active learning system, PQ4R, in the text, and gives students multiple ways to connect with the text's current research and relevant applications. In this edition, Rathus invites students to learn about the latest in evolutionary psychology, biology, diversity, and gender issues in psychology--in a text that is concise yet thorough.

Analyse Der Phobie Eines Fünfjährigen Knaben-Sigmund Freud 2018-04-05 Aus dem Buch: "Wir wollen zur Ehrenrettung unseres kleinen Hans ein Weiteres tun. Er benimmt sich eigentlich nicht schlechter als ein Philosoph der Wundtschen Schule. Für einen solchen ist das Bewußtsein der nie fehlende Charakter des Seelischen, wie für Hans der Wiwimacher das unentbehrliche Kennzeichen alles Lebenden. Stößt der Philosoph nun auf seelische Vorgänge, die man erschließen muß, an denen aber wirklich nichts von Bewußtsein wahrzunehmen ist - man weiß nämlich nichts von ihnen und kann doch nicht umhin, sie zu erschließen -, so sagt er nicht etwa, dies seien unbewußte seelische Vorgänge, sondern er heißt sie dunkelbewußte." Sigmund Freud (1856-1939) war ein österreichischer Neurologe, Tiefenpsychologe, Kulturtheoretiker und Religionskritiker. Er war der Begründer der Psychoanalyse und gilt als einer der einflussreichsten Denker des 20. Jahrhunderts. Seine Theorien und Methoden werden bis heute diskutiert und angewendet.

Lifespan-David A. Sinclair 2019-09-10 A NEW YORK TIMES BESTSELLER A paradigm-shifting book from an acclaimed Harvard Medical School scientist and one of Time's most influential people. It's a seemingly undeniable truth that aging is inevitable. But what if everything we've been taught to believe about aging is wrong? What if we could choose our lifespan? In this groundbreaking book, Dr. David Sinclair, leading world authority on genetics and longevity, reveals a bold new theory for why we age. As he writes: "Aging is a disease, and that disease is treatable." This eye-opening and provocative work takes us to the frontlines of research that is pushing the boundaries on our perceived

scientific limitations, revealing incredible breakthroughs—many from Dr. David Sinclair’s own lab at Harvard—that demonstrate how we can slow down, or even reverse, aging. The key is activating newly discovered vitality genes, the descendants of an ancient genetic survival circuit that is both the cause of aging and the key to reversing it. Recent experiments in genetic reprogramming suggest that in the near future we may not just be able to feel younger, but actually become younger. Through a page-turning narrative, Dr. Sinclair invites you into the process of scientific discovery and reveals the emerging technologies and simple lifestyle changes—such as intermittent fasting, cold exposure, exercising with the right intensity, and eating less meat—that have been shown to help us live younger and healthier for longer. At once a roadmap for taking charge of our own health destiny and a bold new vision for the future of humankind, *Lifespan* will forever change the way we think about why we age and what we can do about it.

Figuring the Future-Jennifer Cole 2008 Child laborers in South Asia, child soldiers in Sierra Leone and Uganda, Chinese youth playing computer games to earn virtual gold, youth involved in sex trafficking in the former Soviet republics and Thailand: these are just some of the young people featured in the news of late. To address how and why youth and children have come to seem so important to globalization, the contributors to this book look at the both the spatial relations and the temporal dimensions of globalization in places as far apart as Oakland, California, and Tamatave, Madagascar, in situations as disparate as the idealization of childhood innocence and the brutal lives of street children. Biographical Research-Brian Roberts 2002 "Roberts is certainly successful in conveying a sense of the rich diversity of biographical research. This is a book based upon a formidably wide-ranging bibliography together with his own, by no means insignificant, contributions to the fieldâ€¦[the]â€¦reader will be left in no doubt as to the central importance of biographical research and of its legitimate position within the social sciences" - David Morgan, Emeritus Professor of Sociology, Manchester University (former President, British Sociological Association), *Auto/Biography*, a BSA Study Group journal, 2002. "Brian Robertsâ€™(tm) book is a highly accessible introduction to biographical methodâ€¦The author deftly and confidently addresses the available work in a variety of disciplines ranging from education through oral history, feminism to memoryâ€¦I warmly recommend this book to any historian interested in biography and what its study can tell them about what they doâ€™(tm). - Alun Munslow, Professor of History, Staffordshire University (Editor, *Rethinking History*), *Rethinking History*, 7:3, pp. 451-5, October, 2003 \* What is biographical research? \* Why has it attracted so much interest? \* How can biographical research be carried out? Biographical Research reflects a rapid expansion of interest in the study of lives taking place within the social sciences. Life story, oral history, narrative, autobiography, biography and other approaches are being used more and more to explore how individuals interpret experiences and social relationships. This book examines the methodological and theoretical developments associated with research on lives in sociology, oral history, ethnography, biography, and narrative analysis. The author includes numerous examples of biographical research from his own work and other studies, and addresses important areas such as the collection and interpretation of materials, uses of biographical research, oral and written accounts, the interview relationship, the construction of the story, memory, audience, and the researcher's own biography. In conclusion it draws out common themes and emerging concerns. Biographical Research is a comprehensive guide to major issues in the study of lives for students and researchers in the social sciences and related fields.

Human Growth and Development Across the Lifespan-David Capuzzi 2016-02-10 A practically focused guide to effective counseling of all clients Human Development Across the Life Span is a practical guide to human growth and development, moving beyond theory to include real-world applications for counselors who work with clients. Written by recognized authorities in mental health counseling and counselor education, this book is fully aligned with the American Counseling Association's accreditation standards and includes contributions by well-known and respected academics and practitioners. Based on an extensive review of course syllabi across CACREP-accredited programs, this book is organized to follow the way courses are typically taught and follows a consistent structure including pedagogical elements that help students learn. After a thorough examination of essential concepts and theories of life span development, the book moves through each stage of human growth and development to provide expert insight, short case studies, and practical applications to counseling. The full Instructor's package provides a useful set of tools, including a Respondus test bank, PowerPoint slides, and an Instructor's Manual. This book is the only text on human growth and development that emphasizes the key implications and applications for counselors, providing useful information and the insights of real experts in each subject area. Understand the developmental milestones at each life stage Appreciate clients' perspectives to better facilitate appropriate interventions Work more effectively with clients of any age, from toddlers to seniors Tailor your approach to meet the unique needs and abilities of each life stage As a counselor, you cannot approach a child's therapy the same way you approach an adult's. Even within each major category, each developmental stage includes a nuanced set of characteristics that, considered appropriately, will inform a more effective treatment plan. Human Development Across the Life Span is a comprehensive guide to understanding all of your clients, and providing the type of counseling that facilitates more positive outcomes.

Science and the Creative Imagination in Latin America-Evelyn Fishburn 2005 This book considers the relationship between the humanities and the sciences in a Latin American context. The geographical emphasis is important, given the prominent role of science in the formation of the region's nation-states and its strong presence in Latin American cultural output. Most of the chapters focus on fictional narratives and scientific discourses. Questions of consent, resistance, and ideology in both fields are considered. The historical study of interplay between science and the novel helps identify what people were expected to believe at a given time, and reveals how these beliefs were sustained.

This book provides insight into the connection between individual self-understanding and the surrounding world of science, within the broader question of the place of science in Latin American culture. Chapters include: - Darwin in South America: Geology, Imagination and Encounter -Walking Backward to the Future: Time, Travel and Race - Natural Parts and Unnatural Others: A reflection on Patrimony at the Turn of the 19th Century - On the Transition from Realism to the Fantastic in the Argentina of the 1870s: Holmberg and the Six of Córdoba - Literature and Science in Martinez Estrada's Work - The Nature Effect in Latin American Science Publications: The Case of the Journal *Redes* - Two Scientific Traditions in Martín Fierro - Heisenberg's Uncertainty Principle in Contemporary Spanish American Fiction - Constructing Postcoloniality: Scientific Enquiries in Cien Años de Soledad - Holograms and Simulacra: Bio Casares, Subiela, Piglia - The Desert Poetics of Mario Montalbetti: Writing, Knowledge, Topologies

Journeys of Embodiment at the Intersection of Body and Culture-Niva Piran 2017-09-15 Journeys of Embodiment at the Intersection of Body and Culture: The Developmental Theory of Embodiment describes an innovative developmental and feminist theory—understanding embodiment—to provide a new perspective on the interactions between the social environment of girls and young women of different social locations and their embodied experience of engagement with the world around them. The book proposes that the multitude of social experiences described by girls and women shape their body experiences via three core pathways: experiences in the physical domain, experiences in the mental domain and experiences related directly to social power. The book is structured around each developmental stage in the body journey of girls and young women, as influenced by their experience of embodiment. The theory builds on the emergent constructs of 'embodiment' and 'body journey,' and the key social experiences which shape embodiment throughout development and adolescence—from agency, functionality and passion during early childhood to restriction, shame and varied expressions of self-harm during and following puberty. By addressing not only adverse experiences at the intersection of gender, social class, ethnocultural grouping, resilience and facilitative social factors, the theory outlines constructive pathways toward transformation. It contends that both protective and risk factors are organized along these three pathways, with the positive and negative aspects conceptualized as Physical Freedom (vs. Corseting), Mental Freedom (vs. Corseting), and Social Power (vs. Disempowerment and Disconnection). Examines the construct of embodiment and its theoretical development Explores the social experiences that shape girls throughout development Recognizes the importance of the body and sexuality Includes narratives by girls and young women on how they inhabit their bodies Invites scholars and health professionals to critically reflect on the body journeys of diverse girls and women Addresses the advancement of feminist, social critical and psychological theory, as well as implications to practice—both therapy and health promotion
